INTRODUCTION

The proposed International Standard on Auditing (ISA) 320, “Materiality in the Identification and Evaluation of Misstatements,” should be read in the context of the “Preface to the International Standards on Quality Control, Auditing, Assurance and Related Services,” which sets out the application and authority of ISAs.

Introduction

1. The purpose of this International Standard on Auditing (ISA) is to establish standards and provide guidance on materiality and how it is used in the identification and evaluation of misstatements when performing an audit of financial statements. The guidance in the ISA is to be adapted for audits of historical financial information other than financial statements.

2. **The auditor should consider materiality when planning and performing the audit to reduce audit risk to an acceptably low level that is consistent with the objective of an audit.**

3. ISA 200, “Objective and General Principles Governing an Audit of Financial Statements,” requires the auditor to plan and perform the audit to reduce audit risk to an acceptably low level that is consistent with the objective of an audit. Audit risk is the risk that the auditor expresses an inappropriate audit opinion when the financial statements are materially misstated. Audit risk is a function of the risk of material misstatement of the financial statements and the risk that the auditor will not detect such misstatement. ISA 315, “Understanding the Entity and its Environment and Assessing the Risks of Material Misstatement,” requires the auditor to identify and assess the risks of material misstatement at the financial statement level, and at the assertion level for classes of transactions, account balances and disclosures. ISA 330, “The Auditor’s Procedures in Response to Assessed Risks,” requires the auditor to design and perform further audit procedures in response to assessed risks. In order to do so, the auditor considers materiality:

   (a) When identifying and assessing the risks of material misstatement;

   (b) When determining the nature, timing and extent of further audit procedures; and

   (c) When evaluating the effect of identified uncorrected misstatements on the auditor’s report.

Nature and Causes of Misstatements

4. A misstatement causes the financial statements to be not in accordance with the applicable financial reporting framework. Misstatements can arise from error or fraud and may consist of:

   (a) An inaccuracy in gathering or processing data from which financial statements are prepared;

   (b) A difference between the amount, classification, or presentation of a reported financial statement item and the amount, classification, or presentation that is required for the item to be in accordance with the applicable financial reporting framework;

   (c) An omission of an amount or disclosure that is required by the applicable financial reporting framework, or is otherwise needed for the fair presentation of the financial statements;

   (d) An incorrect accounting estimate arising, for example, from an oversight or misinterpretation of facts; and
(e) Differences between management’s and the auditor’s judgments concerning accounting estimates, or the selection and application of accounting policies, that the auditor considers inappropriate.

5. The term “error” refers to an unintentional misstatement in the financial statements. The term “fraud” refers to an intentional act by one or more individuals among management, those charged with governance, employees, or third parties, involving the use of deception to obtain an unjust or illegal advantage. Two types of intentional misstatements are relevant to the auditor, that is, misstatements resulting from fraudulent financial reporting and misstatements resulting from misappropriation of assets. These misstatements are addressed in ISA 240, “The Auditor’s Responsibility to Consider Fraud in an Audit of Financial Statements”.

Materiality in the Context of an Audit

6. Materiality can be defined in the following terms:

“Omissions or misstatements of items are material if they could, individually or collectively, influence the economic decisions of users taken on the basis of the financial statements. Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor.”

7. If the applicable financial reporting framework uses a different definition of materiality, the auditor considers whether that definition includes other factors that are relevant to the auditor’s determination of materiality in the context of the audit.

Users

8. The auditor’s judgment as to matters that are material to users of financial statements is based on consideration of the needs of:

• The intended users of the auditor’s report; and

• Other users, if any, to whom the auditor has a legal responsibility.

In an audit of general purpose financial statements, the auditor considers the needs of these users as a group; the auditor does not consider the possible effect of misstatements on specific individual users, which may vary widely. The International Accounting Standards Board’s “Framework for the Preparation and Presentation of Financial Statements” (the IASB’s Framework) indicates that, for a profit oriented entity, as investors are providers of risk capital to the enterprise, the provision of financial statements that meet their needs will also meet most of the needs of other users that financial statements can satisfy. In the audit

---

1 The determination of such differences in judgment concerning accounting estimates, including whether they are considered to be misstatements and, if so, how the amount of misstatement is measured, is addressed in [proposed revised] ISA 540, “The Audit of Accounting Estimates and Related Disclosures (Excluding Those Involving Fair Value Measurements and Disclosures).”

2 As defined in International Accounting Standard (IAS) 1, “Presentation of Financial Statements”. In the ISAs, misstatements are considered to include omissions.

3 Whether the auditor has a legal responsibility will depend on the circumstances of each case and the relevant jurisdiction.
of such entities, therefore, the collective needs of investors as a group is an appropriate frame of reference when determining materiality.

9. When determining materiality in audits of financial statements or other historical financial information prepared for a special purpose, the auditor considers the needs of specific users in the context of the objective of the engagement.

10. The evaluation of whether a misstatement could influence economic decisions of users, and so be material, involves consideration of the characteristics of those users. Users are assumed to:
   
   (a) Have a reasonable knowledge of business and economic activities and accounting and a willingness to study the information with reasonable diligence;

   (b) Understand that financial statements are prepared and audited to levels of materiality and that there is a relationship between the level of materiality used and the cost and timing of the audit;

   (c) Recognize the uncertainties inherent in the measurement of amounts based on the use of estimates, judgment and the consideration of future events; and

   (d) Make reasonable economic decisions on the basis of that information.

The determination of materiality, therefore, takes into account how users with such characteristics could reasonably be expected to be influenced in making economic decisions.

Determining Materiality for the Financial Statements as a Whole

11. The auditor should determine a materiality level for the financial statements as a whole for the purpose of:

   (a) Determining the extent and nature of risk assessment procedures;

   (b) Identifying and assessing the risks of material misstatement; and

   (c) Determining the nature, timing and extent of further audit procedures.

12. The auditor determines a materiality level for the financial statements as a whole when establishing the overall audit strategy for the audit (see ISA 300, “Planning and Audit of Financial Statements”). Determining a materiality level for the financial statements as a whole helps to guide the auditor’s judgments in identifying and assessing the risks of material misstatements and in planning the nature, timing and extent of further audit procedures. This materiality level does not, however, establish a threshold below which identified misstatements are always considered to be immaterial when evaluating those misstatements and their effect on the auditor’s report. As discussed in paragraph 36, the circumstances related to some identified misstatements may cause the auditor to evaluate them as material even if they are below the materiality level determined when establishing the overall audit strategy.

USE OF PERCENTAGES OF BENCHMARKS

13. The determination of what is material is a matter of professional judgment. The auditor often applies a percentage to a chosen benchmark as a step in determining materiality for the financial statements as a whole. When identifying an appropriate benchmark, the auditor has regard to factors such as:
• The elements of the financial statements (e.g. assets, liabilities, equity, income and expenses) and the financial statement measures defined in the applicable financial reporting framework (e.g. financial position, financial performance and cash flows), or other specific requirements in the financial reporting framework;

• Whether there are financial statement items on which, for the particular entity, users’ attention tends to be focused (e.g. for the purpose of evaluating financial performance);

• The nature of the entity and the industry in which it operates; and

• The size of the entity, nature of its ownership and the way it is financed.

Examples of benchmarks that might be appropriate, depending on the nature and circumstances of the entity, include total revenues, gross profit and other categories of reported income, such as profit from continuing operations. Profit from continuing operations may be a suitable benchmark for profit oriented entities but may not be an appropriate benchmark for the determination of materiality when, for example, the entity's earnings are volatile, when the entity is a not-for-profit entity or when it is an owner managed business where the owner takes much of the pre-tax income out of the business in the form of remuneration. For asset based entities, an appropriate benchmark might be net assets.

14. Illustrative examples of percentages applied to benchmarks that might be considered include:

• For a profit oriented listed entity, five percent of profit before tax from continuing operations, or one half percent of total revenues;

• For a profit oriented owner managed entity, an amount of ten percent of profit before tax and management remuneration, or two percent of current assets or owners’ equity;

• For a not-for-profit entity, one half percent of total expenses or total revenues;

• For an entity in the mutual fund industry, one half percent of net asset value.

The auditor may consider higher or lower percentages than those illustrated above to be appropriate. The benchmark selected and the percentage applied reflect, in the auditor’s professional judgment, the measures that users are most likely to consider important.

15. When determining materiality, the auditor ordinarily considers prior periods’ financial results and financial positions, the period-to-date financial results and financial position, and budgets or forecasts for the current period, taking account of significant changes in the entity’s circumstances (e.g. a significant business acquisition) and relevant changes of conditions in the economy as a whole or the industry in which the entity operates. For example, when the auditor usually determines materiality for a particular entity based on a percentage of profit, circumstances that give rise to an exceptional decrease or increase in profit may lead the auditor to conclude that materiality is more appropriately determined using an annualized profit figure based on past results.

16. Materiality is determined without regard to the degree of inherent uncertainty associated with the measurement of particular items. For example, the fact that the financial statements include very large provisions with a high degree of estimation uncertainty (e.g. provisions for insurance claims in the case of an insurance company, oil rig decommissioning costs in the case of an oil company, or, more generally, legal claims against an entity) does not cause
the auditor to determine the materiality level for the financial statements to be higher than for financial statements that do not include such inherent estimation uncertainties.

**Materiality for Particular Items of Lesser Amounts Than the Materiality Level Determined for the Financial Statements as a Whole**

17. When establishing the overall strategy for the audit, the auditor should consider whether, in the specific circumstances of the entity, misstatements of particular items of lesser amounts than the materiality level determined for the financial statements as a whole, if any, could, in the auditor’s judgment, reasonably be expected to influence economic decisions of users taken on the basis of the financial statements. Any such amounts determined represent lower materiality levels to be considered in relation to the particular items in the financial statements.

18. In making this judgment, the auditor considers factors such as:

- Whether accounting standards, law or regulations affect users’ expectations of the degree of accuracy of certain items (e.g. disclosures of related party transactions and the remuneration of management and those charged with governance);
- The key disclosures in relation to the industry and the environment in which the entity operates (e.g. research and development costs for a pharmaceutical company);
- Whether attention is focused on the financial performance of a particular business segment that is separately disclosed in the financial statements (e.g. for a newly acquired business).

19. Obtaining an understanding of the views and expectations of those charged with governance, and of management, may help the auditor judge whether, in the specific circumstances of the entity, misstatements of particular items of lesser amounts than the materiality level for the financial statements as a whole, if any, could reasonably be considered material by the users of the financial statements.

**Tolerable Error**

20. When assessing the risks of material misstatements and designing and performing further audit procedures to respond to the assessed risks, the auditor allows for the possibility that some misstatements, of lesser amounts than the materiality level, could, in the aggregate, result in a material misstatement of the financial statements. To do so, the auditor uses professional judgment to determine levels of tolerable error for classes of transactions, account balances and disclosures. Such amounts of tolerable error are lower than the materiality level.

**Considerations as the Audit Progresses**

21. The auditor should revise the materiality levels in the event of becoming aware of information during the audit that would have caused different levels to have been determined initially.

---

“Tolerable error” is the maximum error in a population (e.g. the class of transactions or account balance) that the auditor is willing to accept.
22. The auditor’s determination of materiality for the financial statements as a whole and for particular items at the time of establishing the overall audit strategy may differ from that at the time of evaluating the results of further audit procedures. This may be because of a change in circumstances that occurs during the audit or because of new information or changes in the auditor’s understanding of the entity and its operations as a result of performing further audit procedures. For example, the auditor may have based materiality on the anticipated period end financial results; if actual financial results are substantially different, the determination of materiality may also change.

23. If the auditor concludes that a lower materiality level than that initially determined is appropriate, the auditor reconsiders the related levels of tolerable error and appropriateness of the nature, timing and extent of audit procedures.

24. The auditor should consider whether the overall audit strategy and audit plan need to be revised if the nature of identified misstatements and the circumstances of their occurrence are indicative that other misstatements may exist that, when aggregated with identified misstatements, could be material.

25. The auditor cannot assume that a misstatement is an isolated occurrence. Evidence that other misstatements may exist include, for example, where the auditor identifies that a misstatement arose from a breakdown in internal control or from inappropriate assumptions or valuation methods that have been widely applied by the entity. In such circumstances the auditor evaluates whether the overall audit strategy and audit plan, and consequently the nature, timing and extent of further audit procedures, need to be reconsidered to reduce audit risk to an acceptably low level. The auditor also considers whether misstatements reflect on the adequacy of the financial records maintained by the entity, or are indicative of internal control weaknesses, and the implications thereof, if any, for the auditor’s reporting responsibilities.

26. If the aggregate of the misstatements that the auditor has identified approaches the materiality level, the auditor considers whether it is likely that undetected misstatements, when taken with the aggregate identified misstatements, could exceed the materiality level and, if so, reconsiders the nature and extent of further audit procedures.

**Communication of Misstatements to Management**

27. The auditor should communicate all known and likely misstatements identified during the audit, other than those that the auditor believes are clearly trivial, to the appropriate level of management on a timely basis.

28. Communication of misstatements to the appropriate level of management on a timely basis is important as it enables management to evaluate whether the items are misstatements, or to inform the auditor if they disagree, and to take action as necessary. The determination of which level of management is the appropriate one is a matter of professional judgment and is affected by such factors as the nature, size and frequency of the misstatement.

---

5 This is not another expression for not material. Matters which are “clearly trivial” will be of a wholly different (smaller) order of magnitude than the materiality levels used in the audit, and will be matters that are clearly inconsequential, whether taken individually or in aggregate and whether judged by any criteria of size, nature or circumstances. Further, whenever there is any uncertainty about whether one or more items are “clearly trivial” (in accordance with this definition), the auditor presumes that the matter is not “clearly trivial.”
29. National laws may prevent the auditor from communicating certain misstatements to management, or others, within the entity. For example, national laws may specifically prohibit a communication, or other action, that might prejudice an investigation by an appropriate authority into an actual, or suspected, illegal act. In such circumstances the auditor ordinarily seeks legal advice.

30. When communicating details of misstatements the auditor distinguishes between:

   (a) Known misstatements, separately identifying:

      (i) Misstatements of fact

      These are specific misstatements identified during the audit including, for example, those arising from mistakes in gathering or processing data and the oversight or misinterpretation of facts; and

      (ii) Misstatements involving subjective decisions

      These arise from differences between management’s and the auditor’s judgments concerning accounting estimates (e.g. because an estimate included in the financial statements by management is outside of the reasonable range of outcomes the auditor has determined), or the selection and application of accounting policies, that the auditor considers to be misstatements; and

   (b) Likely misstatements

      These are misstatements that the auditor considers likely to exist based on an extrapolation from audit evidence obtained. For example, the amount obtained by projecting known misstatements identified in an audit sample to the entire population from which the sample was drawn.

31. The auditor should request management to correct all known misstatements, other than those that the auditor believes are clearly trivial. Where the auditor evaluates the amount of likely misstatement in a class of transactions, account balance or disclosure as material, either individually or in aggregate with other misstatements, the auditor should request management to examine the class of transactions, account balance or disclosure in order to identify and correct misstatements therein.

32. After management has examined a class of transactions, account balance or disclosure and corrected misstatements that are found, the auditor performs further audit procedures to reevaluate the amount of likely misstatement. The auditor discusses with management the consequences for the auditor’s report if management does not examine the class of transactions, account balance or disclosure to identify and correct misstatements found.

33. If management refuses to correct some or all of the misstatements communicated to it by the auditor, or identified when management examined a class of transactions, account balance or disclosure, the auditor obtains an understanding of management’s reasons for not making the corrections and takes that into account when considering the qualitative aspects of the entity’s accounting practices (see paragraph 39).
Evaluating the Effect of Uncorrected Misstatements

34. The auditor should evaluate whether uncorrected misstatements that have been identified during the audit are material, individually or in aggregate. In making this evaluation, the auditor should consider the size and nature of the misstatements, both in relation to particular classes of transactions, account balances and disclosures and the financial statements as a whole, and the particular circumstances of their occurrence.

35. Before considering the aggregate effect of identified uncorrected misstatements, the auditor considers each misstatement separately:

(a) To evaluate its effect in relation to the relevant individual classes of transactions, account balances or disclosures;

(b) To evaluate whether, in considering the effect of the individual misstatement on the financial statements as a whole, it is appropriate to offset misstatements. For example, it may be inappropriate to offset misstatements of items that are disclosed separately in the financial statements;

(c) To evaluate the effect of misstatements related to prior periods.

36. The circumstances related to some misstatements may cause the auditor to evaluate them as material, individually or when considered together with other identified misstatements, even if they are of a lower level than the auditor had determined to be material when establishing the overall audit strategy. Circumstances that may affect the evaluation include the extent to which the misstatement:

• Affects compliance with regulatory requirements;

• Affects compliance with debt covenants or other contractual requirements;

• Masks a change in earnings or other trends, especially in the context of general economic and industry conditions;

• Affects ratios used to evaluate the entity’s financial position, results of operations or cash flows;

• Affects segment information presented in the financial statements (e.g. the significance of the matter to a segment or other portion of the entity's business that has been identified as playing a significant role in the entity's operations or profitability);

• Has the effect of increasing management compensation, for example, by ensuring that the requirements for the award of bonuses or other incentives are satisfied;

• Is a misclassification between particular account balances (e.g. misclassification between operating and non-operating income or recurring and non-recurring income items; a misclassification between restricted and unrestricted resources in a not-for-profit entity; or a misclassification between balance sheet items that may not affect income);

• Is significant relative to the auditor’s understanding of users’ expectations. For example, where particular levels of forecast earnings have previously been communicated to users by management;
• Relates to items involving particular parties (e.g. whether external parties to the transaction are related to members of the entity’s management);

• Is an omission of information not specifically required by the applicable financial reporting framework but which, in the judgment of the auditor, is important to the users’ understanding of the financial position, financial performance or cash flows of the entity;

• Affects other information that will be communicated in documents containing the audited financial statements (e.g. information to be included in a “Management Discussion and Analysis” or an “Operating and Financial Review”) that may affect the expectations of the users of the financial statements.

The circumstances listed above are only examples; not all of these circumstances are likely to be present in all audits, nor is the list necessarily complete. The existence of any circumstances such as these does not necessarily lead to a conclusion that the misstatement is material.

37. If the auditor believes that a misstatement is, or may be, the result of fraud then, even if the effect of the misstatement is not material to the financial statements, the auditor considers the implications of the misstatement in relation to other aspects of the audit as described in ISA 240.

38. In evaluating whether the financial statements as a whole are free of material misstatement, the auditor also considers whether information obtained during the audit indicates that qualitative aspects of the entity’s accounting practices have resulted in a material misstatement in the financial statements.

39. In preparing the financial statements, there are a number of judgments management makes in relation to the amounts and disclosures in those financial statements. During the audit, the auditor is alert for the possibility that management’s judgments may be biased and that the cumulative effect of such a lack of neutrality, together with uncorrected misstatements that have been identified during the audit, may cause the financial statements as a whole to be materially misstated. Indicators of a lack of neutrality in management’s judgments that the auditor takes into account when considering whether the financial statements as a whole are materially misstated include:

• The selective correction of misstatements brought to management’s attention during the course of the audit (e.g. the correction of misstatements with the effect of increasing reported earnings, but not the correction of misstatements that have the effect of decreasing reported earnings).

• Possible management bias in the making of accounting estimates (e.g. when management’s selection of accounting estimates appears to lack neutrality, including, for example, where estimates consistently lie at one end of the reasonable ranges of outcomes the auditor has determined, or when management changes the relative location of an accounting estimate within the reasonable range of outcomes from period to period) – See [proposed revised] ISA 540, “The Audit of Accounting Estimates and Related Disclosures (Excluding Those Involving Fair Value Measurements and Disclosures)” for further guidance.
Evaluating the Overall Effect of Audit Findings on the Auditor’s Report

40. If the auditor concludes that, or is unable to conclude whether, the financial statements are materially misstated, the auditor should consider the implications for the auditor’s report on the financial statements.

41. [Proposed] ISA 701, “Modifications to the Independent Auditor’s Report,” provides guidance on circumstances when the independent auditor’s report should be modified and the form and the content of the modifications to the auditor’s report in those circumstances.

Communications With Those Charged With Governance

42. Standards and guidance in respect of communications about materiality and misstatements to those charged with governance are set out in [proposed revised] ISA 260, “Communication of Audit Matters With Those Charged With governance.”

Documentation

43. The auditor should document:
   (a) The levels of materiality and tolerable error, including any changes thereof, used in risk assessment procedures and in determining the nature, timing and extent of the further audit procedures and in evaluating the results of the audit procedures, and the basis on which those levels were determined;
   (b) Summaries of corrected and uncorrected misstatements related to known and likely misstatements; and
   (c) The auditor’s conclusion as to whether uncorrected misstatements individually or in aggregate, do or do not cause the financial statements to be materially misstated, and the basis for that conclusion.

44. Misstatements are documented in a manner that allows the auditor to:
   (a) Separately consider the effects of:
      (i) Known misstatements, distinguishing between misstatements of fact and misstatements involving subjective decisions; and
      (ii) Likely misstatements;
   (b) Consider the effect of aggregate misstatements on the financial statements; and
   (c) Assess the effect of misstatements on particular groups of accounts, segment information, ratios, trends and compliance with legal, regulatory and contractual requirements (e.g. debt covenants).

Effective Date

45. This ISA is effective for audits of financial statements for periods commencing on or after [date].

Public Sector Perspective

1. In evaluating whether a misstatement is material, the public sector auditor should consider any legislation or regulation which may impact that evaluation.
2. In the public sector, issues such as public interest and ensuring effective legislative oversight should be considered when assessing whether an item is material by virtue of its nature. This is particularly so for items that relate to compliance with regulation, legislation or other authority.
