Ministerial Statement

Overall, the 2018/19 year-end results are strong. They demonstrate the Coalition Government is delivering both increased investment to address our long-term infrastructure and social deficits, together with continued delivery of responsible fiscal management.

The results show the operating balance before gains and losses (OBEGAL) surplus increasing and the Crown’s net worth growing. Net core Crown debt as a percentage of GDP has decreased to 19.2% – below both the previous year’s forecast and the Budget 2019 forecast.

These results demonstrate the continuing strength in the economy, with nominal GDP growing by 3.6% for the year ended 30 June 2019. Core Crown tax revenue rose from the previous year with all major tax types increasing. 2018/19 saw more people in employment, increases in average wages, additional domestic consumption and higher individual and corporate profits. The Treasury notes that some of the strength in tax revenue was partly due to the improvements in the recognition of tax revenue, enabled by the transition of the administration of income tax to START (Simplified Tax and Revenue Technology).

Both nominal private and general government consumption expanded by 5.0% in the year while residential investment increased by 7.9%. Nominal business investment grew by 2.9%. Expenditure as a percentage of GDP was 29.0%, in line with The Treasury’s Budget 2019 forecast of 29.1%. Core Crown expenditure rose 8.0% from the previous year, largely due to the Government’s increased investment in health and education, and continued expenditure on superannuation.

The operating balance before gains and losses (OBEGAL) reached a surplus of $7.5 billion, an increase of $2.0 billion when compared to 2017/18. This is $4.0 billion ahead of the OBEGAL position forecast at Budget 2019, and the largest surplus since 2008. The variation from the forecast is largely due to one-off factors that are not likely to continue over time, such as the $2.6 billion from the revaluation of rail assets.

Losses from the valuation of the Crown’s long-term liabilities (ACC and Government Superannuation Fund) arose from changes in assumptions used to value these liabilities. This resulted in losses on non-financial instruments of $14.1 billion for the year. Investment gains of $4.4 billion (primarily in NZSF and ACC) reflected strong market performance. When these gains and losses are combined with the OBEGAL result, the total Crown operating balance was a deficit of $2.3 billion. The operating balance can fluctuate between years, due to its sensitivity to market conditions, such as equity markets and discount rates.

The Crown’s assets increased by $25.8 billion to reach $365.8 billion at 30 June. Total Crown liabilities increased by $15.1 billion to $219.4 billion. Net worth attributable to the Crown increased by $10.1 billion to $139.7 billion, reflecting upward valuation of the Crown’s physical assets, partly offset by the operating balance deficit.

The Government’s investment programme meant capital spending exceeded net cash from the core Crown’s operations, resulting in the core Crown recording a residual cash deficit of $0.7 billion. This led to net core Crown debt of $57.7 billion, $0.2 billion higher than at 2017/18. In GDP terms, net core Crown debt fell from 19.9% in 2017/18 to 19.2% this year.

All together these accounts represent a sound and resilient position, as recognised by international observers and ratings agencies. As a country we are well positioned to deal with a slowing global economy in the tail end of the economic cycle. The government will deliver our investments to deal with the long-standing issues in our economy and society. We are delivering new infrastructure investment, lifting productivity, mitigating and adapting to climate change, improving child wellbeing and addressing the other social deficits this Government inherited.

Hon Grant Robertson
Minister of Finance
30 September 2019
Statement of Responsibility

These financial statements have been prepared by the Treasury in accordance with the provisions of the Public Finance Act 1989. The financial statements comply with New Zealand generally accepted accounting practice and with Public Benefit Entity Accounting Standards (PBE standards) for the public sector.

The Treasury is responsible for establishing and maintaining a system of internal control designed to provide reasonable assurance that the transactions recorded are within statutory authority and properly record the use of all public financial resources by the Government Reporting Entity. To the best of my knowledge, this system of internal control has operated adequately throughout the reporting period.

Caralee McLiesh
Secretary to the Treasury
30 September 2019

I accept responsibility for the integrity of these financial statements, the information they contain and their compliance with the Public Finance Act 1989.

In my opinion, these financial statements fairly reflect the financial position of the Crown as at 30 June 2019 and its operations for the year ended on that date.

Hon Grant Robertson
Minister of Finance
30 September 2019
Commentary on the Financial Statements
Fiscal Overview

Operating revenue
Ensure a progressive taxation system that is fair, balanced, and promotes the long-term sustainability and productivity of the economy.

Operating expenses
Maintain its expenditure to within the recent historical range of spending as a ratio of GDP. Ensure expenditure is phased, controlled, and directed to maximise its benefits, in particular prioritising investments to address the long-term financial and sustainability challenges facing New Zealand.

Operating balance (before gains and losses)
Deliver a sustainable operating surplus (before gains and losses) across an economic cycle.

Net worth
Strengthen net worth consistent with the debt and operating balance objectives.

Debt
Maintain total debt at prudent levels. Reduce the level of net core Crown debt to 20% of GDP within five years of taking office, and maintain it at prudent levels thereafter.

Fiscal Strategy
The difference between total Crown revenue and expenses gives us the operating balance before gains and losses (OBEGAL)

$199.3b
- $111.4b = $77.9b

Revenue
$111.4b
- $66.5b (Core Crown tax revenue (28.0% of GDP))
- $32.3b (Other revenue)

Expenses
$111.4b
+ $111.4b (OBEGAL (excluding minority interests))
- $7.5b (OBEGAL + ($1.5b))

Gains and losses
$0.4 (net surpluses from accounts and JVs)
- $10.1b (debt and losses)
- ($2.3b) (operating balance deficit (excluding minority interests))

Non-residual cash items
$199.3b
- $77.9b = $121.4b

Capital items
$77.9b
- ($1.5b) = $76.4b

Residual cash items
$121.4b
- $76.4b = $45.0b

Net worth
$126.3b
- $23.0b = $103.3b

Assets
$365.8b
- $219.4b = $146.4b

Liabilities
$219.4b
- $76.4b = $143.0b

Net core Crown debt
$57.5b
- ($0.7b) = $56.8b

Gross sovereign issued debt
$90.9b
- $33.2b = $57.7b

Core Crown financial assets
$33.2b
- $3.3b = $30.0b

2019 Financial Results
Numbers may not add due to rounding.
### Fiscal Overview

#### Operating revenue
Ensure a progressive taxation system that is fair, balanced, and promotes the long-term sustainability and productivity of the economy.

#### Operating expenses
Maintain its expenditure to within the recent historical range of spending as a ratio of GDP. Ensure expenditure is phased, controlled, and directed to maximise its benefits, in particular prioritising investments to address the long-term financial and sustainability challenges facing New Zealand.

#### Operating balance (before gains and losses)
Deliver a sustainable operating surplus (before gains and losses) across an economic cycle.

#### Net worth
Strengthen net worth consistent with the debt and operating balance objectives.

#### Debt
Maintain total debt at prudent levels. Reduce the level of net core Crown debt to 20% of GDP within five years of taking office, and maintain it at prudent levels thereafter.

At a Glance

The Government’s fiscal position has continued to strengthen this year with a surplus in the operating balance before gains and losses (OBEGAL), net core Crown debt reduced as a share of the economy and net worth increased in nominal terms.

- Core Crown tax revenue was $6.2 billion more than last year and was higher than the Budget 2019 forecast by $1.8 billion (page 11).
- Core Crown expenses were $6.4 billion higher than last year, but $0.3 billion less than Budget 2019 forecast (page 13).
- Core Crown residual cash was a deficit of $0.7 billion, compared to last year’s residual cash surplus of $1.3 billion. This was a result of higher capital cash flows than the operating cash flows (page 18).
- Gross debt decreased nominally by $3.6 billion to $84.4 billion from the prior year, and decreased as a percentage of GDP to 28.1% (page 20).
- Net core Crown debt increased in nominal terms by $0.2 billion largely as a result of the residual cash deficit in the current year, but continued to decrease as a percentage of GDP (to 19.2%) (page 18).
- Outside of the core Crown, State-owned enterprises and Crown entities’ contribution to OBEGAL was higher than last year by $1.8 billion (page 16).
- The OBEGAL surplus of $7.5 billion was $2.0 billion higher than last year (page 16). However, the level of this year’s surplus is partly owing to one-off positive items. For example, the $2.6 billion positive impact from the KiwiRail impairment reversal.
- The total Crown operating balance (excluding minority interests) was a deficit of $2.3 billion largely a result of total Crown net losses of $10.1 billion arising from changes in long-term liability valuation assumptions (page 17).
- Net worth increased by $10.7 billion. This is largely owing to uplifts on the property, plant and equipment, partially offset by the operating balance deficit (page 21).

1 Core Crown tax revenue is higher than total Crown tax revenue owing to eliminations.
2 Gross sovereign-issued debt excluding Reserve Bank settlement cash and Reserve Bank bills.
3 Net core Crown debt excluding the New Zealand Superannuation Fund (NZS Fund) and advances.
4 Excluding minority interests.
A comparison of the year end results against Budget 2019 is included on pages 25 to 27.

These financial statements\(^1\) contain the audited results for the financial year ended 30 June 2019. The results are compared against previous years and against forecasts for the 2018/19 year:

- **Budget 2018** refers to the *2018 Budget Economic and Fiscal Update* published in May 2018, and
- **Budget 2019** refers to the *2019 Budget Economic and Fiscal Update* published in May 2019.

The financial statements of the Government received an unmodified auditor’s opinion for the year ended 30 June 2019.

This commentary should be read in conjunction with the financial statements on pages 42 to 140.

---

\(^1\) The financial statements of the Government of New Zealand refer to both core Crown and total Crown results. Core Crown is comprised of Ministers of the Crown, Departments, Offices of Parliament, the NZS Fund and the Reserve Bank. Total Crown is comprised of the core Crown, State-owned Enterprises (including mixed ownership model companies) and Crown entities.
Summary

_Growth in the economy has resulted in an increase in core Crown tax revenue..._

Nominal GDP grew by 3.6% in the year to reach $300.0 billion while real GDP increased 2.6%.

Real activity was supported by population growth with New Zealand’s population growing 1.6% in the year to date. Both nominal private and general government consumption expanded by 5.0% while residential investment increased by 7.9%. Increased consumer spending has been supported by higher wage growth with the average hourly earnings increasing 3.5% in the year.

In addition, higher corporate profits and individuals income was partly driven by an increase in business investment of 2.9%.

The above economic conditions have contributed to an increase in core Crown tax revenue, which is up $6.2 billion from last year to $86.5 billion. Growth in core Crown tax revenue in 2018/19 was greater than GDP growth, primarily owing to system changes impacting how tax revenue is calculated.

Other core Crown revenue increased by $0.6 billion to $7.2 billion.

... while spending decisions have driven an increase in core Crown expenses...

As a share of the economy, core Crown expenses increased to 29.0% of GDP (27.8% of GDP in 2018); in nominal terms, core Crown expenses increased by $6.4 billion (8.0%) to $87.0 billion.

The largest drivers of growth in nominal core Crown expenditure were the Government’s 100-Day Plan, Budget 2018 and Budget 2019 decisions. At the time of announcement, these decisions increased core Crown expenses in 2018/19 by around $4.7 billion. In addition, expenditure on social assistance and the transport sector made up most of the remaining increase in core Crown expenses.

The increase in core Crown expenditure was the largest year-on-year increase since 2011.

...there are some large positive one-off items this year...

A portion of the strength in tax revenue is from the transition to the new processes and system used to calculate tax revenue. Refer to page 12 for more information.

Also, total expenses have been partially offset by the reversal of KiwiRail’s previous impairment expense of $2.6 billion. This increase resulted from a change in the valuation approach of the rail network from a commercial basis to a public benefit basis. Refer to the box on page 15.
... which have increased the OPEGAL surplus...

The OPEGAL surplus of $7.5 billion for 2018/19 increased by $2.0 billion from last year. However, the level of this year’s surplus is owing to some large one-off positive items. For example, excluding the $2.6 billion positive impact from KiwiRail, the current year’s surplus is lower than the previous year.

... however net losses more than offset the OPEGAL surplus.

Overall, total net losses for the year were $10.1 billion, largely owing to $14.1 billion of valuation losses in relation to long-term liability valuations for Accident Compensation Corporation (ACC) and the Government Superannuation Fund (GSF). This compares to valuation losses of $2.4 billion last year.

The valuation losses were partially offset by investment gains of $4.4 billion in 2018/19, mostly from New Zealand Superannuation Fund (NZS Fund) and ACC recording gains from their investment activities of $1.9 billion and $1.5 billion respectively.

When these net losses are combined with the OPEGAL surplus, the operating balance was a deficit of $2.3 billion.

The Crown’s operating balance is particularly sensitive to changes in some key assumptions used to value assets and liabilities. For example, this year a decrease in discount rates added $10.8 billion to the ACC liability. More details of balance sheet sensitivities can be found on page 24.

These one-off items do not flow into the cash available to the Crown...

The one-off items mentioned above are non-cash in nature, therefore, they do not impact the level of cash available for the Crown. Cash from core Crown operating activities of $6.0 billion has been generated, $1.2 billion less than last year.

... and core Crown capital spending exceeds cash from operations...

Capital spending of $6.7 billion was $0.8 billion higher than last year. The core Crown capital spending largely consisted of purchases of physical assets of $3.0 billion, investment in Crown entities of $2.7 billion and the Government’s contributions to NZS Fund of $1.0 billion.

... resulting in a core Crown cash deficit, increasing net core Crown debt...

Taking into account both operating and capital activities of the Crown, there is a cash shortfall (residual cash deficit) this year of $0.7 billion.

Net core Crown debt of $57.7 billion increased by $0.2 billion from last year. As a percentage of GDP, net core Crown debt has continued to fall, from 19.9% in 2017/18 to 19.2% in 2018/19.
... while the revaluation of physical assets increased net worth.

Alongside the operating balance deficit of $2.3 billion, revaluation uplifts of physical assets increased by $12.5 billion. There was also a one-off increase in the student loan valuation of $0.6 billion. As a result, net worth increased by $10.7 billion to $146.3 billion.

Total assets grew by $25.8 billion to $365.8 billion, while liabilities increased by $15.1 billion to $219.4 billion.

Increases in property, plant and equipment and financial assets such as NZS Fund investments contributed to the growth in assets while an increase in long-term liabilities was the main driver of the increased liability.
**Revenue**

Total Crown revenue was $119.3 billion, an increase of $9.3 billion from last year largely owing to increased core Crown tax revenue.

**Core Crown Tax Revenue**

Core Crown tax revenue was $86.5 billion, up $6.2 billion (7.8%) from the year before. The increase in core Crown tax revenue was broadly a result of more people in employment, increases in average wages, additional domestic spending, and higher corporate and individual profits. In addition, some of the strength was driven by the recent transition to the new Simplified Tax and Revenue Technology (START) system, implemented in April 2019 by the Inland Revenue Department that is used to calculate tax revenue. For more details, refer to the box page 12.

Most major tax types increased over the year with four tax types making up most of the increase (Table 3):

- **Source deductions** increased by $2.2 billion (7.0%). This increase was owing to growth in the number of people in employment, and the effect of rising average tax rates.

- **Corporate tax revenue** increased by $1.8 billion (13.0%), mainly owing to profit growth and changes to the way the new START system calculates tax revenue.

- **Goods and Services Tax (GST)** was $1.0 billion (5.0%) higher than last year, with most of the growth coming from domestic consumption, which was up 5.0% on the previous year.

- **Other individuals tax** was $0.5 billion (10.3%) higher than last year, mainly owing to income growth, and the correction of some Portfolio Investment Rates (charged on the investment returns of KiwiSaver accounts and managed funds) as a result of transitioning to Inland Revenue Department’s new system.

Commentary on the Financial Statements

Revenue (continued)

Core Crown tax revenue recognition process change

For financial reporting purposes, tax revenue is recognised when taxable income is earned by a taxpayer and it can be reliably measured. The recognition of tax revenue requires a degree of estimation. Over recent years, the Inland Revenue Department has been working to improve the accuracy of this estimation. Actual tax revenue is not known until the tax returns for the period have been filed. This usually happens sometime after the publication of the financial statements. For example, the final calculation of the income tax for a 31 March 2019 taxpayer may not be due until April 2020.

In April 2019, the administration of income tax (mainly corporate and individuals tax) moved to Inland Revenue Department’s new system, START (Simplified Tax and Revenue Technology). Other tax types (eg, GST) transitioned to START in previous years, but income tax is the most complex to estimate for reporting purposes. START has improved the way tax revenue is recognised as estimates are based on the most recently-available data for each individual and corporate taxpayer. The previous process relied on the forecast of provisional tax revenue. This change in process has resulted in bringing forward the recognition of some tax revenue for the 2018/19 year (cash has not changed).

The fundamental change in the approach means that it is not practical to estimate the amount of tax revenue brought forward this year from transitioning to START.

The key judgements and assumptions underpinning tax revenue estimates are discussed in note 2 (page 61) of the financial statements.

Other Revenue

Total Crown other revenue was $32.8 billion, an increase of $3.1 billion from the previous year. Other revenue includes fees and levies (eg, ACC levies), revenue from operations of Crown entities and State-owned enterprises (SOEs), interest revenue and dividend revenue.

Core Crown other revenue increased by $0.6 billion to $7.2 billion. A portion of this increase was owing to revenue from the New Zealand Emissions Trading Scheme (ETS) of $0.2 billion. This increase was owing to more carbon units being surrendered to the Crown and an increase in the price of these surrendered units. The balance of the increase reflects small movements across various entities.

The SOE and Crown entity sectors (including inter-segment eliminations) recorded revenue of $25.7 billion, an increase of $2.5 billion from the prior year. This increase related largely to sales of goods and services in the SOE sector and an increase in Earthquake Commission’s (EQC) insurance revenue owing to increased levy revenue and higher reinsurance income.
Expenses

Total Crown expenses were $111.4 billion in the current year, $7.4 billion more than last year. Most of the increase occurred within the core Crown segment ($6.4 billion). The increase in Crown entities and SOEs (including eliminations) was $3.6 billion, but this is offset by a reversal of KiwiRail’s previous impairment expenses of $2.6 billion, resulting in a net increase of $1.0 billion since last year. Refer to page 15 for the details on KiwiRail’s impairment expenses.

Core Crown Expenses

The core Crown expenses increase of $6.4 billion is the largest year on year increase since 2011. The expenditure, as a share of the economy was higher than the previous year at 29.0% of GDP (Figure 9).

The largest drivers of growth in core Crown expenditure were the Government’s 100-Day Plan, Budget 2018 and Budget 2019 decisions.

On announcement, the combination of these decisions were expected to increase core Crown expenses, by around $4.7 billion in 2018/19.

Source: The Treasury
The budget decisions with the biggest financial impact related to social security and welfare. This was mainly funding for the Families Package. Decisions impacting health expenses were the second largest financial impact, increasing by around $1.0 billion from 2017/18.

In addition:

- New Zealand Superannuation costs were higher than last year by $0.9 billion. This was owing to an increase in recipient numbers from an average of around 741,300 in 2017/18, to 767,000 in 2018/19 and increased payment rates.

- Transport expenses increased by $0.3 billion from the prior year, owing to an increase in state highway maintenance.

Figure 10 shows the composition of core Crown expenses by key areas of Government spending. The three spending areas of social security and welfare, health and education expenses make up 70% of all core Crown spending.

Other core Crown expenses (18%) includes other areas of spending (eg, transport, economic, defence, and environmental protection and finance costs) and these levels of spending remained consistent with spending in the prior year.

Other Expenses

The SOE and Crown entity sectors (including inter-segment eliminations) recorded net expenses of $24.4 billion. Excluding the $2.6 billion one-off reversal of KiwiRail’s impairment expenses, the expenditure was $27.0 billion, and an increase of $3.6 billion or 15% from 2017/18.

The following key areas contributed to most of the $3.6 billion increase:

- DHB expenses were higher than the previous year as a result of increased cost of health services and additional personnel expenses from estimated liabilities under the Holidays Act 2003.

- Higher insurance expenses in ACC mostly reflecting additional claims.

- The SOE sector’s higher expenses were consistent with higher revenue, although the growth in expenses was at a lower rate compared to revenue growth.
Rail network

Background

The rail network comprises around 3,700 kilometres of track (excluding yards and sidings) and is used primarily for freight transport. In addition, it is also used by KiwiRail for long distance passenger transport and metro passenger services. Some tracks are dual purpose (i.e., used for both freight and metro), however there are a number of tracks which serve metro transport only (e.g., the Johnsonville line). The rail infrastructure earns revenue from freight and long distance passenger charges. In addition, network access charges are collected from regional authorities in relation to the metro services.

Since the restructuring of KiwiRail as a profit-oriented entity in 2012, the rail network infrastructure used for freight services (including dual use assets required for freight operations) has been valued at fair value, reflecting the recoverable amount that could be expected to be received from a third party in an orderly transaction. The portion of dual use assets not required for freight operations and metro only assets were reported in these financial statements at an optimised depreciated replacement cost basis, reflecting the community benefits of this investment rather than treating this portion as a cash generating asset at a whole-of-Government level. Those valuation approaches reflected the government purpose in holding the assets.

Change in valuation method

Following a review to consider the context of KiwiRail’s purpose within a multi modal transport system, the underlying assumption of the benefits of rail were reframed as: “Rail enables access and mobility, transporting people and goods to where they need to go, supporting productivity and business growth, reducing emissions, congestion and road deaths, and strengthening social and cultural connections between communities”. As a consequence, a valuation for the rail freight network that only reflected its cash generating potential was no longer appropriate.

These financial statements include the valuation of all the rail infrastructure using an Optimised Depreciated Replacement Cost method. To the extent that the assets deliver public benefits and would be replaced, a replacement cost approach is used, depreciated to reflect the extent the assets are through their useful lives. The valuation is ‘optimised’ by reporting components within the network that do not produce benefits, as surplus assets that are measured at their recoverable amount.

Fiscal impacts

The impact is to increase the value of the rail freight network to $6.3 billion compared to a value of $1.0 billion that would have been reported under the previous basis. Table 6 shows how the increase flows through these financial statements.

1 Other gains and losses includes the net surplus from associates and joint ventures/operations.

OBEAL (Operating Balance before Gains and Losses)

The OBEAL surplus of $7.5 billion is an improvement of $2.0 billion from last year.

Figure 11 shows the composition of OBEAL from the different reporting segments of the Government.

The core Crown segment is consistent with last year with an OBEAL surplus of $6.6 billion.

For the year ended 30 June 2019, the SOE segment reported a surplus of $3.2 billion, up $2.5 billion from last year largely owing to the change in rail freight network valuation methodology (refer to the box on page 15). In addition, increased revenue from SOEs outpaced the increase in operating expenditure.

The Crown entity segment reported a deficit of $1.5 billion, more than the previous year’s deficit of $0.8 billion. The primary driver of this relates to higher DHB deficits, and increased ACC insurance expenditure of $1.0 billion.
Operating Balance (continued)

Operating Balance

When the net losses ($10.1 billion) and the net surplus from associates and joint ventures ($0.3 billion) for the year are combined with the OBEGAL surplus, this resulted in a total Crown operating balance deficit of $2.3 billion. This year’s deficit of $2.3 billion compares to last year’s operating balance surplus of $8.4 billion, a $10.7 billion change.

Total net losses for the year were $10.1 billion compared to the prior year’s gains of $2.4 billion.

Gains on financial instruments of $4.4 billion (compared to $5.3 billion last year), mainly reflect continued favourable investment performance (primarily in NZS Fund and ACC) and a gain of $0.7 billion on student loans owing to a decrease in the discount rate (used to value expected loan repayments in today’s dollars). The current year saw volatility in financial markets offset by favourable movements in exchange rates, resulting in investment gains being $0.9 billion lower than last year.

Losses on non-financial instruments of $14.3 billion (compared to $2.8 billion of losses last year) largely consisted of actuarial losses on the ACC and GSF long term liabilities. These losses were mainly owing to decreases in the discount rates used to value all outstanding claims in today’s dollars. Liabilities with long durations such as ACC and GSF are particularly sensitive to discount rate movements. If discount rates reduce, the liability in today’s dollar increases.

Figure 13 shows a comparison of the yield curve of forward discount rates used to value the ACC and GSF liabilities over the last four years.

</tbody>
</table>

1 Net debt is defined as net core Crown debt excluding the NZS Fund and advances.
2 Gross debt is defined as gross sovereign-issued debt excluding the Reserve Bank settlement cash and Reserve Bank bills.

Net Debt

Net debt has increased by $0.2 billion from $57.5 billion in 2017/18 to $57.7 billion in 2018/19. This is largely owing to a residual cash deficit of $0.7 billion, explained below. Partly offsetting the residual cash deficit was an increase in circulating currency of $0.4 billion, driven by public demand for currency. As a share of the economy, net debt continued to fall (19.2% of GDP versus 19.9% of GDP a year earlier).

Residual Cash

Net cash flows from core Crown capital spending for the year exceeded net operating cash flows, resulting in a residual cash deficit of $0.7 billion. This compares to a residual cash surplus of $1.3 billion last year. Table 9 summarises the key residual cash movements from last year to the current year.

- Tax receipts were $3.6 billion higher than last year, partly driven by the increases in core Crown revenue from economic growth and particularly, the labour market.
- Sovereign other receipts were $0.5 billion higher than last year mainly owing to more ETS participants taking the ‘fixed-price option’ where they can pay the Government $25 for each unit they are liable to surrender to meet their obligations.
- Operating payments (including interest) were $5.5 billion higher than last year, broadly in line with the increase in core Crown expenses.

Source: The Treasury
Capital spending for 2018/19 totalled $6.7 billion, an increase of $0.8 billion from the previous year. Capital spending included:

- Net purchase of physical assets of $3.0 billion, including $0.9 billion by the Ministry of Education in relation to school property, $0.7 billion for defence equipment, $0.4 billion for prisons, and $0.2 billion for hospitals.

- Net investments of $2.7 billion, the largest of which was the Crown’s $1.1 billion contributions to NZTA for state highways. Other investments included $0.3 billion in KiwiRail, $0.3 billion to Crown Infrastructure Partners Limited and $0.2 billion for DHBs.

- Net cash from advances (eg, Student loans) were a net outflow of $0.1 billion.

- Government contributions to the NZS Fund were $1.0 billion this year, an increase of $0.5 billion from the previous year.

Figure 16 analyses capital cash flows by sector excluding NZS Fund. This shows that 48% of capital spending ($2.8 billion) was within the transport and education sectors. The total spend in the transport sector was $1.8 billion (31%), largely for the state highway network. The education sector spent $1.0 billion (17%) purchasing physical assets for schools and upgrading existing property.
Debt (continued)

**Gross Debt**

Gross debt, which reflects the borrowings of the core Crown, decreased by $3.7 billion from $88.1 billion in 2017/18 to $84.4 billion this year (Figure 17). As a percentage of the economy, gross debt decreased by 2.3% to 28.1% of GDP (30.4% of GDP a year earlier).

The decrease in nominal gross debt was predominantly owing to the increase in repurchases and repaying bonds on maturity outpacing the issuance of Government bonds. In addition, derivatives in loss decreased as a result of market movements, particularly in relation to exchange rate movements.

**The Crown’s borrowing programme**

The total level of borrowing outstanding (denominated in Government Bonds and Treasury Bills) as at 30 June 2019 was $4.3 billion lower than at the end of the previous year. The proceeds from bond issuance during the year contributed to funding the March 2019 bond maturity and beginning repurchases of the April 2020 bond. Repurchasing the April 2020 bond prior to maturity assists in smoothing the Crown’s cash profile, reducing risk, and minimising any residual market impacts associated with the maturity of this bond.

Net Worth

Net worth is the difference between the Crown’s total assets (what the government owns) and liabilities (what the government owes). This difference primarily consists of the accumulation of past operating surpluses and deficits (referred to as taxpayers’ funds) and revaluation uplifts in the physical assets.

Net worth was $146.3 billion at 30 June 2019, an increase of $10.7 billion from a year earlier. This was largely owing to revaluation uplifts of the Crown’s assets (eg, the rail and state highway networks). As a share of the economy, net worth grew 1.9% from 46.9% of GDP in 2017/18 to 48.8% of GDP in the current year.

Total Crown Balance Sheet

Total Crown assets were $365.8 billion at 30 June 2019, a $25.8 billion increase from last year. This growth was largely in property, plant and equipment (PPE) of $19.0 billion, while financial assets grew by $5.8 billion and other assets by $1.0 billion.

Total Crown liabilities were $219.4 billion, an increase of $15.1 billion from the previous year. This is largely owing to an increase of $13.3 billion in ACC insurance liabilities mainly arising from to a decrease in discount rates.

</table>
Financial Assets

Financial assets at $163.3 billion were $5.8 billion higher than last year.

The following key areas contributed to the increase:

- The financial asset portfolio managed by NZS Fund and ACC grew reflecting investment performance, as discussed earlier. The primary purpose of these assets is to help pay for ACC claims and fund future New Zealand superannuation costs.

- Growth in Kiwi Group Holdings loans and advances of $2.1 billion.

- An increase in student loans of $1.4 billion. This is owing to a one-off increase of $0.6 billion as a result of a new accounting standard and changes in the valuation assumptions, particularly discount rates.

- Offsetting the above is a decrease in financial assets that are included as part of the calculation of net core Crown debt of $4.7 billion to fund the Crown’s borrowing programme and residual cash deficit.

Property, Plant and Equipment

The $19.0 billion increase in PPE was across a number of classes such as state highways, the rail network, housing, and electricity generation assets. The increase is mainly from additions and revaluation changes.

As seen in Figure 19, the largest uplifts in PPE related to the following asset classes:

- The value of state highways (including land) increased by $5.5 billion, mainly reflecting the continued valuation improvements, the development of new state highway assets and improvements to existing state highway network.

- The rail network increased by $5.2 billion mainly owing to the network now being valued as a public benefit asset (detailed on page 15 – Rail network box).

- The housing portfolio managed by Housing New Zealand Corporation increased by $1.7 billion of which $1.2 billion relates to an increase in houses, with the remainder of the increase owing to revaluation uplifts at 30 June 2019.

- Electricity generation assets increased by $1.4 billion mainly due to changes in the assumptions used in the valuations of these assets.
Borrowings

Total borrowings represents the borrowings undertaken by the core Crown, Crown entities and SOEs. Borrowings at $110.5 billion was $5.2 billion less than last year.

The overall decrease is driven by a combination of factors as seen in Figure 20:

- Government bonds decreased by $5.5 billion owing to changes in the Crown’s borrowing programme (discussed on page 20).
- Derivatives in loss decreased by $1.1 billion as a result of market movements, particularly movements in exchange rates (mentioned in the gross debt narrative above).
- Borrowings by Crown entities increased by $1.4 billion to fund capital projects by NZTA and Housing New Zealand. This is partly offset by a decrease of small movements across various entities.
- Kiwi Group Holdings borrowings (eg, customer deposit held) increased by $2.1 billion, which offsets the increase in Kiwi Group Holdings advances (eg, mortgages) discussed on page 22.

Insurance and Retirement Liabilities

ACC’s insurance liability increased this year by $13.3 billion from $43.3 billion to $56.6 billion. GSF liabilities also increased by $2.2 billion from $11.0 billion to $13.2 billion. The increases were owing to actuarial valuation changes driven largely by a decrease in the discount rates and changes in inflation assumptions.
Sensitivities and Risks to the Crown Balance Sheet

Many of the assets and liabilities on the Crown’s balance sheet are measured at “fair value” in order to disclose current estimates of what the Crown owns and owes. Fair value can be calculated using comparable market prices, but where these are not available, values can be estimates based on certain assumptions. While the measurement at fair value is more relevant for decision making purposes, it can be volatile, resulting in fluctuations in the value of the assets and liabilities with changes in the underlying assumptions. Below is a summary of some of the key sensitivities to the valuation of the Crown’s major assets and liabilities.

Interest rates, share prices and exchange rates

Financial assets were $163.3 billion at 30 June 2019, a significant proportion of the Crown’s balance sheet and increasing by $69.9 billion over the last 10 years. Entities like NZS Fund and ACC hold investments to make financial returns, and those asset values are dependent on market prices, interest rates and exchange rates, which can all be volatile. Table 13 shows the sensitivity of the financial assets to changes in these variables.

Discount rates and inflation rates

The Crown has two significant liabilities that have long durations. Both the ACC insurance and GSF retirement liabilities are valued by actuaries and are based on present valuing estimated future cash flows, some up to 80 years into the future. Inflation rates are used to help estimate future cash flows while discount rates are used to determine the value of those future cash flows in today’s dollars. Changes in these assumptions can have significant impacts on the valuation because the cash flows are so large and over such long periods (eg, ACC’s cash flows of $87.1 billion are discounted to $53.3 billion). Table 14 shows the impact that a 1% change in inflation and discount rates would have on these liabilities (and the gain or loss as a result of the change). For example, this year, a change in the discount rate for ACC’s short term cash flow duration decreased by 1.09%, which contributed to a large actuarial loss flowing through to the Crown’s operating balance.

Changes in other estimates

Outside of market factors, valuations are subject to a number of judgements and estimates. In general, as time goes on, better information becomes available and initial estimates are updated to reflect current information. New and updated information is a source of valuation volatility, especially if changes in assumptions are significant one-off adjustments in any given year. Some examples of this include:

- Student loans: assumptions around the expectations of student incomes and repayment rates affects the value of these loans, with changes being reported as gains or losses.
- Property, plant and equipment asset revaluations: revaluations of these assets, using a combination of market data and assumptions, led to a $12.5 billion increase, mainly on the rail network (refer to the box on page 15) and state highway networks.

Other risks to the balance sheet

In addition to those items on the balance sheet there are a number of liabilities or assets that may arise in the future but are not yet included; either because they are dependent on an uncertain future event occurring (eg, outcome of litigation) or the liability or asset cannot be measured reliably. If these contingencies crystallise, there will be associated impacts on the operating balance. Refer to note 25 for a list of these areas as at 30 June 2019.

¹ Favourable variances against forecast have a positive sign and unfavourable variances against forecast have a negative sign.

Core Crown Tax Revenue

Core Crown tax revenue was $1.8 billion (2.1%) higher than expected in Budget 2019, with the largest differences being as follows:

- Other individual tax and corporate tax revenue were $1.1 billion (23.1%) and $0.4 billion (2.7%) above forecast. This is mainly owing to expected growth in profits and the new simplified tax and revenue system implemented by Inland Revenue.

- Source deduction revenue was $0.2 billion (0.6%) above forecast. Labour market data released in early August show that employment growth and wage growth were both above forecast through the June quarter, likely contributing to the favourable forecast variance.

Commentary on the Financial Statements

Year End Results Compared to Budget 2019 (continued)

Core Crown Expenses

Core Crown expenses were $0.3 billion (0.3%) lower than expected. Excluding the top-down adjustment of $0.8 billion core Crown expenses were $1.1 billion ($1.3%) lower than expected.

The lower than forecast result was largely owing to expenditure now expected to be spent in the 2019/20 fiscal year and lower than anticipated demand for some services. The most significant variances were in the transport, education, and primary industries sectors.

OBEGAL

The OBEGAL surplus was $4.0 billion higher than Budget 2019 forecast. The variance against Budget 2019 relates to the favourable variances in core Crown revenue and core Crown expenses. In addition, SOEs results were $2.7 billion higher than forecast, largely owing to the change in the valuation method of the rail freight network owing to assumptions around its purpose. This valuation change resulted in the reversal of previous years’ impairment expenses of $2.6 billion. However, the higher than forecast Crown entities deficits ($0.8 billion) partially offsets the favourable SOE segment’s results.

Operating Balance

The total Crown operating balance deficit of $2.3 billion was $2.0 billion higher than the deficit forecast in Budget 2019. Although the OBEGAL surplus was $4.0 billion higher than expected, this was more than offset by actuarial losses. Increased actuarial losses from forecast of $9.4 billion was partially offset by increased gains of $2.4 billion on the Crown’s investment portfolios primarily managed by NZS Fund and ACC. The actuarial losses were owing to updated discount rates at 30 June 2019 which were lower than the 31 January rates used at Budget 2019, and changes in the inflation assumptions.

Residual Cash

The residual cash deficit was $2.1 billion less than the deficit forecast at Budget 2019, as a result of lower than forecast operating payments of $1.2 billion and higher than forecast core Crown tax receipts of $0.5 billion. Capital payments were in line with the forecast.

Core Crown operating payments were lower than forecast, driven from timing delays and demand for services.

The increase in tax receipts was driven by source deductions and corporate tax receipts which were $0.2 billion and $0.4 billion respectively above forecast.

In addition, receipts from the ETS were $0.4 billion higher than forecast as a result of more ETS participants taking the fixed-price option where they can pay the Government $25 for each unit they are liable to surrender to meet their obligations.

Net Debt

Net debt at $57.7 billion (19.2% of GDP) was $2.6 billion below forecast, mainly driven by the lower residual cash of $2.1 billion compared to forecast. As capital spending exceeds the cash flows from operating activities, this indicates that some capital spending is continuing to be funded through borrowings. In addition to the $2.1 billion residual cash variance, higher circulating currency driven by public demand for currency, and gains and losses on financial assets and financial liabilities each contributed $0.2 billion to the net core Crown debt variance from forecast.

Gross Debt

Gross debt at $84.4 billion (28.1% of GDP) was $1.2 billion higher than forecast.
Year End Results Compared to Budget 2019 (continued)

Total Borrowings
Total borrowings at 30 June 2019 were $110.5 billion and were $1.6 billion lower than the Budget 2019 forecast.

Net Worth
Net worth was $10.1 billion higher than the Budget 2019 forecast, mainly owing to an upwards revaluation of physical assets of $12.5 billion, partially offset by the operating balance deficit of $2.3 billion. Revaluations usually occur at 30 June and are not forecast. The largest revaluations were to the rail freight and state highway networks.

Independent Audit Report of the Controller and Auditor-General
TO THE READERS OF THE FINANCIAL STATEMENTS OF THE GOVERNMENT OF NEW ZEALAND FOR THE YEAR ENDED 30 JUNE 2019

Opinion

I have audited the financial statements of the Government of New Zealand (the financial statements of the Government) for the year ended 30 June 2019 using my staff, resources, and appointed auditors and their staff. The financial statements of the Government on pages 42 to 152 comprise:

- the annual financial statements that include the statement of financial position as at 30 June 2019, the statement of financial performance, analysis of expenses by functional classification, statement of comprehensive revenue and expense, statement of changes in net worth, and statement of cash flows for the year ended on that date, a statement of segments, and notes to the financial statements that include accounting policies, borrowings as at 30 June 2019, and other explanatory information;
- a statement of unappropriated expenditure for the year ended 30 June 2019;
- a statement of expenses or capital expenditure incurred in emergencies for the year ended 30 June 2019; and
- a statement of trust money administered by departments for the year ended 30 June 2019.

In my opinion, the financial statements of the Government on pages 42 to 152:

- present fairly, in all material respects, the Government’s:
  - financial position as at 30 June 2019;
  - financial performance and cash flows for the year ended on that date;
  - borrowings as at 30 June 2019;
  - unappropriated expenditure for the year ended 30 June 2019;
  - expenses or capital expenditure incurred in emergencies for the year ended 30 June 2019; and
  - trust money administered by departments for the year ended 30 June 2019;
- comply with generally accepted accounting practice in New Zealand, in accordance with Public Benefit Entity accounting standards.

My audit was completed on 30 September 2019. This is the date on which my opinion is expressed.

The basis for my opinion is explained below and I outline the key audit matters addressed in my audit. I outline the responsibilities of the Treasury and the Minister of Finance and my responsibilities for the financial statements of the Government. I also comment on other information and explain my independence.

Basis for opinion

I carried out my audit in accordance with The Auditor-General’s Auditing Standards, which incorporate the Professional and Ethical Standards and the International Standards on Auditing (New Zealand) issued by the New Zealand Auditing and Assurance Standards Board. My responsibilities under those standards are further described in the Auditor’s responsibilities for the audit of the financial statements of the Government section of this report.

I have fulfilled my responsibilities in accordance with The Auditor-General’s Auditing Standards.

I believe that the audit evidence I have obtained is sufficient and appropriate to provide a basis for my opinion.
Key audit matters

Key audit matters are those matters that, in my professional judgement, were of most significance in my audit of the financial statements of the Government for the current year. In applying my professional judgement to determine key audit matters, I considered those matters that are complex, have a high degree of uncertainty, or are important to the public because of their size or nature. I have included the entitlements under the Holidays Act 2003 as a key audit matter because of the significant uncertainties associated with the obligations to remediate issues under the Act. There is also understandably, much public interest in this matter because it affects many current and former public servants.

The key audit matters addressed in my audit of the financial statements of the Government as a whole, and in forming my opinion thereon, are as follows.

<table>
<thead>
<tr>
<th>Recognising tax revenue</th>
<th>How we addressed this matter</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Government recognised tax revenue of $85.7 billion for the year ended 30 June 2019. Of that amount $56.4 billion was direct income tax, primarily from individuals and companies.</td>
<td>We obtained an understanding of the systems, processes, and controls for the receipt and review of provisional and final tax returns, tax assessments, and tax revenue receipts. This included understanding Inland Revenue’s new IT system.</td>
</tr>
<tr>
<td>As outlined in Note 2, direct income tax from companies and other persons is subject to significant assumptions and judgements because of the timing differences between the reporting date and when taxpayers file tax returns. To record direct income tax revenue, judgement is applied to estimating: - the amount of tax revenue to be collected from provisional taxpayers who have not yet filed their final tax return; - the amount of tax revenue where payments have been received but no provisional or final tax return has been filed; and - the amount of tax revenue to be collected from, or refunded to, taxpayers who are not subject to provisional tax.</td>
<td>We reviewed the assumptions and judgements applied in the new process for estimating direct income tax revenue. We assessed controls in place over significant reconciliation processes. We tested the underlying data used in the various tax revenue estimation models to ensure that it was relevant and was used appropriately. We did this by reviewing evidence to support key assumptions. We also tested the sensitivity of key assumptions. I am satisfied that the assumptions and judgements applied in estimating direct income tax revenue use the best information available, and are reasonable and supportable.</td>
</tr>
<tr>
<td>During the year, a new IT system was implemented by Inland Revenue, which changed the process for estimating direct income tax revenue. It is now based on individual taxpayers, rather than macro-economic cash flow forecasts. The change in process for estimating direct income tax revenue means that some different assumptions and judgements have had to be applied this year.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Valuing property, plant, and equipment</th>
<th>How we addressed this matter</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Government owns significant physical assets totalling $178.0 billion. The valuation of some of these assets requires significant judgement. There are uncertainties inherent in the valuation of these assets, the quality of data available, and the benefits these assets provide. I have identified some specific assets where such judgements are evident.</td>
<td>We obtained an understanding of how the state highway network is valued, the significant estimates and assumptions used, and their reasonableness. This involved confirming the competence, capabilities, and objectivity of the valuer, challenging the valuer’s key assumptions, and assessing the valuation procedures, including the information extracted from databases. We also considered whether there were any limitations placed on the valuer and the appropriateness of centrally calculated rates that were applied to the valuation.</td>
</tr>
<tr>
<td>State highway network As outlined in Note 16, the state highway network (excluding land) has been valued at $37.2 billion at 30 June 2019 by an independent external valuer. Due to the unique nature of the state highway network, the value of the assets cannot be measured with precision. Significant estimates and assumptions have been applied to the valuation, which include assumptions about: quantities and rates used in the construction of state highway network components, the remaining life of the assets, and the unit costs to apply. Changes to the underlying estimates and assumptions can cause a material movement in the state highway valuation.</td>
<td>We also carried out audit procedures to confirm that key controls were operating over the systems and processes used to record cost and other asset information about the state highway network.</td>

</tr>
</tbody>
</table>

There continue to be uncertainties associated with the valuation of the state highway network. As part of the continuing valuation improvement programme, the costs relating to the formation component have been updated. Work continues on improving the data quality that underpins the valuation.

Some of the costs associated with road construction (for example, traffic management) in urban areas have been assessed as a significant part of the network that may be undervalued. An allowance to recognise these costs has been included since 2014 where a reliable estimate can be made. This year a unit rate was determined for these costs and included in the valuation.

Rail network

As outlined in Note 16, the rail network has been valued at $6.4 billion at 30 June 2019. In arriving at this value, the entire rail network (used for both freight and metro transport) has been valued on the basis of its public benefit nature.

In previous years, the freight part of the network has been valued on a commercial basis. The extent to which the Government views the freight part of the network as commercial has been open to debate for a number of years.

The Government is currently reviewing rail, to define its purpose, determine the appropriate structure and capital requirements, and determine how to fund it in future.

This review is ongoing and it recognises the challenges in making investment decisions, given the duality of commercial “for profit” activities that align with a State-owned enterprise’s commercial mandate, and other “public benefit” activities that deliver social benefits rather than commercial returns. It also recognises the challenges of integrating relatively short-term funding commitments with prudent investment decisions for long-life assets such as rail infrastructure.

Cabinet received the first of three review reports in May 2019. The paper noted that all rail, including freight, contributes to national and regional economic growth and reduces emissions and congestion, reduces road deaths and injuries, facilitates wider social benefits, and provides resilience and connection between communities.

Cabinet agreed in principle to a resilient and reliable rail system to deliver the outcomes for transport and wider benefits the Government seeks, and budget decisions were made on this basis.

As a consequence of that agreement, it is no longer appropriate for the Government to value the rail freight network on a commercial basis.

Therefore, the rail network assets are recorded at Optimised Depreciated Replacement Cost in these financial statements, in keeping with Public Benefit Entity accounting standards.

We considered the evidence to support the public benefit nature of the rail network. This evidence included reviewing:
- the first Cabinet paper about the rail review;
- Budget announcements
- strategy documents; and
- forecast results.

Although the rail review is still underway, it is sufficiently advanced and provided enough evidence to support valuing the rail network on the basis of its public benefit nature.

The evidence showed that the Government intends to seek wider social benefits from its investment in rail.

Based on Cabinet decisions and associated budget announcements, I am satisfied that the judgement to value the rail network on a public benefit basis in the Government’s financial statements is appropriate.

We obtained an understanding of how the rail network is valued, the significant estimates and assumptions used, and the reasonableness of them. This involved confirming the competence, capabilities, and objectivity of the valuer, challenging the valuer’s key assumptions, and assessing the valuation procedures, including the information extracted from databases.

We considered whether there were any limitations placed on the valuer and the appropriateness of centrally calculated rates that were applied to the valuation.

We also carried out audit procedures to confirm that key controls were operating over the systems and processes used to record cost and other asset information related to the rail network.

We ensured that the revaluation movements and reversals of previous impairments were correctly accounted for.

I am satisfied that the value of the rail network at 30 June 2019 is reasonable and consistent with valuation practices, and that the adjustments to reflect the change in the valuation are appropriate.

### Valuing insurance and superannuation liabilities

**Government Superannuation Fund’s unfunded liability**

As outlined in Note 20, the Government’s liability for public servants’ superannuation entitlements for past and current members of the Government Superannuation Fund has been valued at $13.2 billion at 30 June 2019 by an independent actuary.

The present value of the unfunded liability is also sensitive to the estimated return on the Fund’s assets, expected rates of salary increases for public servants who are members of the Fund, and estimated inflation and discount rates. The Fund’s assets are exposed to share price risks arising from its holding of equity instruments. Equity instruments are reported at fair value. Movements in share prices therefore directly translate into movements in the value of the share investment portfolio.

The sensitivity of critical assumptions and judgements is analysed in Note 20. This sensitivity analysis indicates that assumptions are closely linked, cannot be viewed in isolation, and changes in assumptions can have a large effect on the value of the liability.

We obtained an understanding of how the Government’s liability for public servants’ superannuation entitlements is valued. This involved confirming the competence, capabilities, and objectivity of the actuary, as well as testing the actuary’s valuation procedures. We engaged our own actuary to review the assumptions, judgements, and procedures used to value the liability.

We tested key controls that ensure the completeness and accuracy of membership data that was used in the actuary’s valuation.

We evaluated the appropriateness of key assumptions used in estimating the return on assets owned by the Fund and compared the expected rates of salary increases against external benchmarks.

I am satisfied that the Government’s reported liability for public servants’ superannuation entitlements at 30 June 2019 is reasonable, and that the disclosures outline the sensitivities of the valuation to changes in assumptions.

### Valuing financial assets and liabilities

As outlined in Note 26, as at 30 June 2019, the Government had financial assets of $145.1 billion (of which $89.6 billion was valued at fair value and $55.5 billion was valued at amortised cost) and financial liabilities of $128.7 billion (of which $8.4 billion was valued at fair value and $120.3 billion was valued at amortised cost).

Financial assets and liabilities measured at fair value include derivatives (which have a principal value of $222.2 billion), marketable securities, and share investments.

Where quoted market prices are not available to determine the value of financial assets and liabilities, fair value must be estimated. This is done by applying a valuation approach that is most appropriate for the asset or liability, such as using valuation models. Inputs into the models will use market data when available; otherwise inputs are derived from non-market data, which requires judgement.

The fair value of financial assets and financial liabilities that are valued using non-observable inputs are valued at $15.4 billion and $0.2 billion respectively.

We obtained an understanding of the valuation techniques, controls, and inputs used to determine the fair value of financial assets and liabilities.

We also carried out a range of audit procedures that reflected the nature of the financial assets and liabilities being valued, the valuation techniques adopted, and the uncertainties that existed in determining their fair values. These audit procedures included:

- testing the internal controls in place over data relating to financial assets and liabilities that have been entered into financial and treasury systems;
- obtaining an understanding of the controls and valuation approaches applied where a fund manager carries out the valuation;
- comparing the fair value of financial assets and liabilities to independent information and investigating any significant variances; and
- assessing the appropriateness of the inputs used for valuing financial assets and liabilities where the fair value was dependent on non-observable inputs.

I am satisfied that the fair values of financial assets and liabilities at 30 June 2019 are reasonable and that the disclosures outline the significant judgements.
As outlined in Note 25, a number of entities have started or completed a review of current and historical payroll calculations to ensure compliance with the Holidays Act 2003 and other relevant legislation.

Where possible, provision has been made in the financial statements of the Government for obligations arising from those reviews and where settlement has not been made in the current or previous financial years.

To the extent that an obligation cannot reasonably be quantified at 30 June 2019, an unquantified contingent liability has been disclosed. Entities continue to calculate the potential liability required to remediate the issues associated with these entitlements. In the case of certain sectors, in particular for District Health Boards (DHBs), there are complexities and the calculation of the liability is taking longer than expected to resolve. Entities in these sectors employ many people and the liabilities to settle these obligations remain uncertain.

As outlined in Note 21, DHBs have recognised provisions. However, the Government has noted that the indicative potential liability could be within a range of $550 million to $650 million. This is based on selecting a small, non-statistical sample of former and current employees, applying a number of assumptions, agreed to by the sector and then calculating an indicative liability by extrapolating the result over the known population. A significant amount of work is still required to finalise the liability, and therefore, there remains a high level of uncertainty over this liability which could fall outside the range of $550 million to $650 million.

For those entities most significantly affected, we obtained an understanding of the progress made in resolving the payroll calculation issues and we assessed the reasonableness of the approach to the financial reporting of these issues.

We carried out a range of procedures to audit the liabilities recognised, including:
- reviewing processes followed for valuing the liabilities and testing a sample of transactions,
- ensuring the completeness of the data used in the valuation of the liability,
- assessing the competence, capabilities, and objectivity of independent experts who were involved in the valuation,
- challenging critical assumptions and judgements made in estimating the liabilities; and
- reviewing the disclosures made.

I am satisfied that the liabilities recognised for entitlements are materially correct and that, in those cases where a liability cannot be reliably measured, the disclosures are appropriate.

Responsibilities of the Treasury and the Minister of Finance for the financial statements of the Government

The Treasury is responsible for preparing financial statements of the Government that:

- comply with generally accepted accounting practice in New Zealand, in accordance with Public Benefit Entity accounting standards;
- present fairly the Government’s financial position, financial performance, and cash flows; and
- present fairly the Government’s:
  - borrowings;
  - unappropriated expenditure;
  - expenses or capital expenditure incurred in emergencies; and
  - trust money administered by departments.

The Minister of Finance is responsible for forming an opinion that the financial statements of the Government present fairly the financial position and financial performance of the Government.

The responsibilities of the Treasury and the Minister of Finance arise from the Public Finance Act 1989.

The Treasury is also responsible for such internal control as it determines is necessary to enable the preparation of financial statements of the Government that are free from material misstatement, whether due to fraud or error. The Treasury is also responsible for the publication of the financial statements of the Government, whether in printed or electronic form.

In carrying out their respective responsibilities for the financial statements of the Government, the Treasury and the Minister of Finance are responsible for assessing the Government’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting.
Auditor’s responsibilities for the audit of the financial statements of the Government

My objectives are to obtain reasonable assurance about whether the financial statements of the Government as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes my opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with The Auditor-General’s Auditing Standards will always detect a material misstatement. Misstatements are differences or omissions of amounts or disclosures, and can arise from fraud or error. Misstatements are considered material if, individually or in the aggregate, they could reasonably be expected to influence the decisions readers make based on the financial statements of the Government.

For the budget information reported in the financial statements of the Government, my procedures were limited to checking that the amounts agree to the Government’s relevant published budgets.

I did not evaluate the security and controls over the publication, whether in printed or electronic form, of the financial statements of the Government.

As part of an audit in accordance with The Auditor-General’s Auditing Standards, I exercise professional judgement and maintain professional scepticism throughout the audit. Also:

- I identify and assess the risks of material misstatement of the financial statements of the Government, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for my opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, because fraud can involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- I obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control used by the Treasury to prepare the financial statements of the Government.

- I evaluate the appropriateness of accounting policies used, and the reasonableness of accounting estimates and related disclosures made by the Treasury.

- I conclude on the appropriateness of using the going concern basis of accounting that has been used by the Treasury to prepare the financial statements of the Government, up to the date of my auditor’s report, based on the audit evidence I have obtained.

- I evaluate the overall presentation, structure, and content of the financial statements of the Government, including the disclosures, and whether the financial statements of the Government represent the underlying transactions and events in a manner that achieves fair presentation.

As part of my audit, I obtain information from my staff and appointed auditors of the organisations that are consolidated into the financial statements of the Government, including information about:

- elimination of transactions between the organisations that are consolidated into the financial statements of the Government;

- application by those organisations of appropriate accounting policies and Treasury instructions to prepare the financial statements of the Government; and

- the risks of material misstatement of the financial statements of those organisations that may affect the financial statements of the Government.

I communicate with the Treasury, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal controls that I identify during my audit.

From the matters communicated with the Treasury, I determine those matters that were of most significance in my audit of the financial statements of the Government for the current year and are therefore the key audit matters described in this report.

I am responsible for expressing an independent opinion on the financial statements of the Government and reporting that opinion to you based on my audit. My responsibility arises from the Public Audit Act 2001.
Other information

The Treasury is responsible for the other information. The other information comprises the information included on pages 1 to 162, but does not include the financial statements of the Government and my auditor’s report thereon.

My opinion on the financial statements of the Government does not cover the other information and I do not express any form of audit opinion or assurance conclusion on that information.

In connection with my audit of the financial statements of the Government, my responsibility is to read the other information. In doing so, I consider whether the other information is materially inconsistent with the financial statements of the Government or my knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on my work, I conclude that there is a material misstatement of this other information, I am required to report that fact. I have nothing to report in this regard.

Independence

While carrying out this audit, my staff and appointed auditors and their staff complied with the Auditor-General’s independence requirements, which incorporate the independence requirements of Professional and Ethical Standard 1 (Revised) Code of Ethics for Assurance Practitioners issued by the New Zealand Auditing and Assurance Standards Board and the International Ethics Standards Board for Accountants’ Code of Ethics for Professional Accountants (IESBA Code).

As an Officer of Parliament, I am constitutionally and operationally independent of the Government. The Auditor-General was, before starting his term as Auditor-General on 2 July 2018, the Deputy Director-General for the Ministry for Primary Industries. As Deputy Auditor-General, I have dealt with all matters relating to the Ministry for Primary Industries. Other than this matter, and in exercising my functions and powers under the Public Audit Act 2001 as the auditor of public entities, I have no relationship with or interests in the Government.

Greg Schollum

Below is an analysis of core Crown expenses by functional classification. Core Crown expenses include expenses incurred by Ministers, Departments, Offices of Parliament, the NZ Superannuation Fund and the Reserve Bank, but not Crown entities and State-owned Enterprises. Details of unappropriated expenditure can be found on pages 141 to 148.

Notes to the Financial Statements

Note 1: Basis of Reporting

Statement of compliance

These financial statements have been prepared in accordance with the Public Finance Act 1989 and with New Zealand Generally Accepted Accounting Practice (NZ GAAP) as defined in the Financial Reporting Act 2013.

For the purposes of these financial statements, the Government reporting entity has been designated as a public benefit entity (PBE). PBEs are reporting entities whose primary objective is to provide goods or services for community or social benefit and where any equity has been provided with a view to supporting that primary objective rather than for a financial return to equity holders.

These financial statements have therefore been prepared in accordance with Public Sector PBE Accounting Standards (PBE Standards) – Tier 1. These standards are based on International Public Sector Accounting Standards (IPSAS).

These financial statements were authorised for issue by the Minister of Finance on 30 September 2019.

Reporting period

The reporting period for these financial statements is for the year ended 30 June 2019.

Where necessary, the financial information for State-owned Enterprises and Crown entities that have a balance date other than 30 June has been adjusted for any transactions or events that have occurred since their most recent balance date and that are significant for the Financial Statements of the Government. Such entities are primarily in the education sector.

Basis of preparation

These financial statements have been prepared on the basis of historical cost modified by the revaluation of certain assets and liabilities, and prepared on an accrual basis, unless otherwise specified (for example, the Statement of Cash Flows).

The financial statements are presented in New Zealand dollars rounded to the nearest million, unless separately identified.

The accounting policies included in these financial statements are the significant accounting policies for the Financial Statements of the Government and appear in grey shaded boxes. A full list of Crown accounting policies can be found at http://www.treasury.govt.nz/publications/guidance/reporting/accounting.

Comparatives

When presentation or classification of items in the financial statements are amended or accounting policies are changed voluntarily, comparative figures have been restated to ensure consistency with the current period unless it is impracticable to do so.

Comparatives referred to as Budget 2018 were 2019 forecasts published in the 2018 Budget Economic and Fiscal Update, while Budget 2019 were 2019 forecasts published in the 2019 Budget Economic and Fiscal Update. These forecasts include budget adjustments for new unallocated spending during the year (both operating and capital) and top-down adjustments which reduce the bias for forecast expenditure by departments to reflect maximum spending limits instead of forecast estimates.
Note 1: Basis of Reporting (continued)

Forecast new capital spending is an amount provided in the forecasts to represent the impact on the financial position and cash flows of capital initiatives expected to be introduced over the forecast period. Forecast new operating spending is an amount included in the forecasts to provide for the operating balance impact of policy initiatives, changes to demographics, and other forecasting changes expected to occur over the forecast period. The top-down adjustment is an adjustment to expenditure forecasts to reflect the extent to which departments use appropriations (upper spending limits) when preparing their forecasts. As appropriations apply to the core Crown only, no adjustment is required to State-owned Enterprises or Crown entity forecasts.

Segment analysis

The Government reporting entity is not required to provide segment reporting as it is a public benefit entity. Nevertheless, information is presented for material institutional components and major economic activities undertaken by the Government reporting entity. The three major institutional components of the Crown are:

- Core Crown: This group, which includes Ministers, government departments, Offices of Parliament, the Reserve Bank of New Zealand and the New Zealand Superannuation Fund, most closely represents the budget sector and provides information that is useful for fiscal analysis purposes. Investments in Crown entities and State-owned Enterprises (SOE) are reported at historic cost in this segment with no impairment. This ensures losses in those entities are reflected in the appropriate segment.

- Crown entities: This group includes entities governed by the Crown Entities Act 2004. These entities have separate legal form and specified governance frameworks (including the degree to which each Crown entity is required to give effect to, or be independent of, government policy).

- State-owned Enterprises: This group includes entities governed by the State-owned Enterprises Act 1986, and (for the purposes of these statements) also includes Air New Zealand Limited, Mercury NZ Limited, Meridian Energy Limited and Genesis Energy Limited. This group represents entities that undertake commercial activity.

Functional analysis is also provided of a number of financial statements items. This functional analysis is drawn from the Classification of the Functions of Government as developed by the Organisation for Economic Co-operation and Development (OECD) and published by the United Nations Statistical Division.

Accounting Standards issued and not yet effective and not early adopted

Standards and amendments to standards, issued but not yet effective that have not been early adopted, and that are relevant to these Financial Statements are:

Financial Instruments

In March 2019, PBE IPSAS 41 Financial Instruments was issued. This new standard will supersede PBE IFRS 9: Financial Instruments and is effective for reporting periods beginning on or after 1 Jan 2022. This new standard is based on IPSAS 41 Financial Instruments, prepared by the IPSASB, and is substantially converged with IFRS 9 Financial Instruments prepared by the IASB. As a consequence of the identical, or almost identical, requirements in PBE IFRS 9 and PBE IPSAS 41, any impact on these financial statements from PBE IPSAS 41 Financial Instruments is likely to be minimal.

These financial statements early adopted PBE IFRS 9: Financial Instruments. That standard introduced a number of changes to the recognition and measurement of financial instruments, including new classification and measurement requirements for financial assets, new hedging requirements and a new impairment model for financial assets. Its main impact in these financial statements has been on the measurement of student loans (refer note 27).

PBE IFRS 9: Financial Instruments was issued in January 2017 because of concerns that once NZ IFRS 9 Financial Instruments (the relevant accounting standard for profit oriented entities) became effective, significant differences between the IFRS-based standard and the IPSAS-based standard on financial instruments would adversely impact the compliance costs for groups such as the Government that include both public benefit entities (PBEs) and for-profit entities, and on the understandability of those group financial statements. These differences would be problematic until the IPSAS-based standard on financial instruments was updated to reflect the changes in the IFRS-based standard.
Note 1: Basis of Reporting (continued)

Consolidated Financial Statements

In January 2017 a suite of accounting standards was issued dealing with consolidation and group reporting issues that are effective for annual periods beginning on or after 1 January 2019, with earlier application permitted. These standards include PBE IPSAS 35 Consolidated Financial Statements, PBE IPSAS 36 Investments in Associates and Joint Ventures, PBE IPSAS 37 Joint Arrangements and PBE IPSAS 38 Disclosure of Interests in Other Entities. The Crown intend to adopt these standards in the 2019/20 Financial Statements of the Government.

The analysis to date of these standards against the entities in which the Government has an interest, suggests any significant impact on which entities are consolidated in the financial statements is unlikely. The New Zealand Superannuation Fund will likely be consolidated as an investment entity rather than on the current line-by-line basis. As a consequence, any controlling interests it has in entities it has invested in will be reported on a fair value basis.

Employee Benefits

PBE IPSAS 39 Employee Benefits issued in January 2017 (updating the existing standard PBE IPSAS 25 Employee Benefits) is effective for annual periods beginning on or after 1 January 2019, with earlier application permitted. The Crown intends to adopt it in the 2019/20 Financial Statements of the Government.

The new standard will have an impact on the way the Government Superannuation Fund defined benefit pension scheme is presented in the financial statements with actuarial gains/losses being presented in the Statement of Comprehensive Revenue and Expense rather than as a gain or loss in the Statement of Financial Performance (refer to note 10 for values). Improved clarity over the scope of employee benefits may mean the recognition of other responsibilities of the Crown, such as veterans’ benefits.

Other Accounting Standards

A number of accounting standards have been issued for profit-oriented entities and/or not-for-profit entities (eg, charities) but not for public sector entities. They have therefore affected, or will affect separate reporting by those entities, but are not yet applicable, nor available for adoption by the Government. They are, however, under active consideration by public sector accounting standard setters. These standards include:

- NZ IFRS 15 Revenue from Contracts with Customers that became effective for profit entities for reporting periods beginning on or after 1 Jan 2018. This standard revised principles to be applied in reporting information about the nature, amount, timing and uncertainty of revenue and cash flows arising from a contract with a customer.

- NZ IFRS 16 Leases that became effective for profit-oriented entities effective for reporting periods beginning on or after 1 Jan 2019. This standard replaces the operating lease/financing lease distinction with a requirement that for leases of more than one year, the lessee is now required to report a right-of-use asset at fair value, which amortises over the term of the arrangement, and a financial liability for the lease obligation, on which interest is paid, and which is settled over the term of the lease.

NZ IFRS 17 Insurance Contracts and PBE IFRS 17 Insurance Contracts effective for profit-oriented entities and not-for-profit entities for reporting periods beginning on or after 1 January 2021 and 1 January 2022 respectively. This standard establishes revised principles for the recognition, measurement, presentation and disclosure of insurance contracts.

For-profit entities within the Government reporting entity (eg, SOEs) will need to adopt these NZIFRSs for their separate financial statements when effective, but must report for these financial statements using the Crown accounting policies based on PBE standards.
**Note 1: Basis of Reporting (continued)**

**Government Reporting Entity as at 30 June 2019**

*Reporting entity*

The Government reporting entity as defined in section 2(1) of the Public Finance Act 1989 means:

- the Sovereign in right of New Zealand, and
- the legislative, executive, and judicial branches of the Government of New Zealand.

The description "Consolidated Financial Statements of the Government reporting entity" and the description "Financial Statements of the Government" have the same meaning and can be used interchangeably.

*Basis of combination*

These financial statements combine the following entities using the acquisition method of combination:

<table>
<thead>
<tr>
<th>Core Crown entities</th>
<th>Other entities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ministers of the Crown</td>
<td>State-owned Enterprises</td>
</tr>
<tr>
<td>Government departments</td>
<td>Crown entities (excluding tertiary education institutions)</td>
</tr>
<tr>
<td>Offices of Parliament</td>
<td>Air New Zealand Limited</td>
</tr>
<tr>
<td>the Reserve Bank of New Zealand</td>
<td>Regenerate Christchurch</td>
</tr>
<tr>
<td>New Zealand Superannuation Fund</td>
<td>Education Council of Aotearoa New Zealand</td>
</tr>
<tr>
<td></td>
<td>Organisations listed in Schedule 4 and 4A <em>(Non-listed companies in which the Crown is majority or sole shareholder)</em> of the Public Finance Act 1989</td>
</tr>
<tr>
<td></td>
<td>Organisations listed in Schedule 5 <em>(Mixed ownership model companies)</em> of the Public Finance Act 1989</td>
</tr>
<tr>
<td></td>
<td>Legal entities listed in Schedule 6 <em>(Legal entities created by Treaty of Waitangi Settlement Acts)</em> of the Public Finance Act 1989</td>
</tr>
</tbody>
</table>

The Crown has a full residual interest in all the above entities with the exception of Air New Zealand Limited, Tāmaki Redevelopment Company Limited (listed in Schedule 4A of the Public Finance Act 1989), Regenerate Christchurch, City Rail Link Limited and the entities listed in Schedule 5 of the Public Finance Act 1989 (Mixed Ownership Model Companies).

Corresponding assets, liabilities, revenue and expenses, are added together line by line. Transactions and balances between these sub-entities are eliminated on combination. Where necessary, adjustments are made to the financial statements of controlled entities to bring the accounting policies into line with those used by the Government reporting entity.

Tertiary education institutions are equity-accounted for the reasons explained in note 17.

City Rail Link Limited is reported as a jointly controlled entity as a consequence of the agreements with Auckland Council in these financial statements for the period ended 30 June 2019 and is also equity accounted. This treatment recognises our share of these entities’ net assets, including asset revaluation movements, surpluses and deficits.
Note 1: Basis of Reporting (continued)

The following tables list the entities within each institutional component.

### Core Crown Segment

#### Departments
- Crown Law Office
- Department of Conservation
- Department of Corrections
- Department of Internal Affairs
- Department of the Prime Minister and Cabinet
- Education Review Office
- Government Communications Security Bureau
- Inland Revenue Department
- Land Information New Zealand
- Ministry for Culture and Heritage
- Ministry for Pacific Peoples
- Ministry for Primary Industries
- Ministry for the Environment
- Ministry for Women
- Ministry of Business, Innovation, and Employment
- Ministry of Defence
- Ministry of Education
- Ministry of Foreign Affairs and Trade
- Ministry of Health
- Ministry of Housing and Urban Development
- Ministry of Justice (Includes Te Arawhiti – Office for the Māori Crown Relations as a departmental agency)
- Ministry of Māori Development
- Ministry of Social Development
- Ministry of Transport
- New Zealand Customs Service
- New Zealand Defence Force
- New Zealand Police
- New Zealand Security Intelligence Service
- Office of the Clerk of the House of Representatives
- Oranga Tamariki, Ministry for Children
- Parliamentary Counsel Office
- Parliamentary Service

Note 2: Key Assumptions and Judgements

These financial statements reflect the Government’s financial position (service potential and financial capacity) as at 30 June 2019, and the financial results of operations and cash flows for the year ended on that date. Underpinning these financial statements are a number of judgements, estimations and assumptions. These include assumptions and judgements about the future, in particular, the service benefits and future cash flows in relation to existing assets and liabilities.

Key assumptions

The assumptions in these financial statements are based on the best information available at the time of their preparation. Given the inherent uncertainty of predicting the future, actual events are likely to differ from these assumptions, which may have a material impact on the results reported in these financial statements. Key assumptions are discussed below.

<table>
<thead>
<tr>
<th>Assumption</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foreign exchange rates</td>
<td>That foreign currency denominated financial assets and liabilities will be able to be translated to New Zealand dollars at the exchange rate prevailing at balance date.</td>
</tr>
<tr>
<td>Share prices</td>
<td>That listed share investments, which consist of approximately 95% of the Government’s total share investments, can be realised at quoted market prices at balance date.</td>
</tr>
<tr>
<td>Interest rates</td>
<td>That current market yield curves provide an appropriate basis for determining the value of the majority of marketable securities and borrowings.</td>
</tr>
<tr>
<td>Carbon price</td>
<td>That the carbon price, determined by the Ministry for the Environment based on the quoted New Zealand Unit spot price at the end of the reporting date as published by OM Financial Limited on their CommTrade Carbon website, reflects the value of units that will be surrendered to the Crown.</td>
</tr>
<tr>
<td>Property prices</td>
<td>That current property prices, determined using market evidence, provide the most relevant basis on which to value land and buildings owned by the Crown (unless it is a specialised asset where optimised depreciated replacement cost will be used).</td>
</tr>
<tr>
<td>Depreciation rates</td>
<td>That the economic useful life of assets (used to determine depreciation rates) will equate to the estimates determined using a combination of engineering and historical evidence.</td>
</tr>
<tr>
<td>Student loans</td>
<td>That the discount rate, consumer price index adjustment, future salary inflation rate and interest rate for overseas borrowers are appropriate for the valuation of student loans.</td>
</tr>
<tr>
<td>Asset Purpose</td>
<td>Assets that are held for commercial purposes are subject to a commercially recoverable amount test (the higher of the income that can be generated from the asset, or the proceeds from its sale). Assets that are held for public benefit purposes are generally valued at optimised depreciated replacement cost. Optimisation means that surplus assets are identified. If not surplus, it can be assumed the asset will be replaced, and therefore the asset value is not reduced below its optimised depreciated replacement cost. If surplus, the asset will be valued at its net selling price.</td>
</tr>
</tbody>
</table>

The Rail Freight Network illustrates the impact of the asset purpose assumption. Treated as a for-profit asset since 2012, this asset had a carrying value of $186 million as at 30 June 2018 based on the amount of cash that could be generated or recovered from it. Following a review to consider the context of rail’s purpose within a multi modal transport system, the underlying assumption of the benefits of rail were framed as: Rail enables access and mobility, transporting people and goods to where they need to go, supporting productivity and business growth, reducing emissions, congestion and road deaths, and strengthening social and cultural connections between communities. As a consequence, a valuation limited to its cash generating potential was no longer appropriate. In this year’s financial statements, the rail freight network is valued using an optimised depreciated replacement cost methodology at $5,428 million. For further information, see note 16.
Note 2: Key Assumptions and Judgements (continued)

A number of long-term assets and liabilities are valued by estimating future cash flows which are then discounted to present value. Some of the cash flows, in particular those relating to long-term liabilities (eg, ACC and GSF obligations) use assumptions to predict cash flows as far as 80 years into the future. Therefore, changes in a number of economic variables can have a significant impact on the Government’s financial position and performance. The most significant of these are:

<table>
<thead>
<tr>
<th>Economic variable</th>
<th>Assumptions and Methodology</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inflation rates</td>
<td>Inflation rate assumptions are used to help estimate future cash flows, as prices are expected to increase through time. The consumer price index (CPI) is most commonly used to indicate the inflation rate. However, some costs (referred to as superimposed inflation) are assumed to increase faster than the rate of inflation due to factors such as innovation in medical treatment.</td>
</tr>
<tr>
<td>Discount rates (time value of money)</td>
<td>Discount rates are used to determine the value of future cash flows in today’s dollar values. The Treasury sets a risk free discount rate for accounting valuation purposes. In the near term discount rates are based on market data and then smoothed to a single long-term risk-free interest rate of 4.30%. A full description of the evidence and methodology used to determine this rate can be found at: <a href="http://www.treasury.govt.nz/publications/guidance/reporting/accounting/discountrates">http://www.treasury.govt.nz/publications/guidance/reporting/accounting/discountrates</a></td>
</tr>
</tbody>
</table>
| Amount and duration of future cash flows | Judgements around the amount and duration of future cash flows are critical for valuations. Some examples of this are:  
  • the length of rehabilitation from injuries for the ACC obligation  
  • mortality rates for the GSF obligation  
  • repayment rates of student loans.  
These assumptions are largely based on extrapolating historical experience. As time goes on, better information becomes available and estimates are updated to reflect more current information. |

**Sensitivity of key assumptions**

The tables below outline the sensitivity of the key assumptions discussed above on the significant valuations included in the statement of financial position. They do not include second or third-order effects on forecast revenues and expenses. A negative impact on the Operating Balance is designated by the use of brackets.

The value of financial assets and financial liabilities are particularly sensitive to changes in market prices and account for a significant portion of the financial position. At 30 June 2019 financial assets totalled $145.0 billion (2018: $142.5 billion) while financial liabilities totalled $128.2 billion (2018: $131.4 billion).

<table>
<thead>
<tr>
<th>Impact on operating balance</th>
<th>2019 $m</th>
<th>2018 $m</th>
</tr>
</thead>
<tbody>
<tr>
<td>NZ dollar exchange rate strengthens by 10%</td>
<td>(1,353)</td>
<td>(846)</td>

<td>118</td>
<td>120</td>
</tr>
</tbody>
</table>

In relation to assumptions concerning property prices, land and buildings account for 54% (2018: 57%) of total property, plant and equipment and 63% (2018: 67%) of the asset revaluation reserve. A significant decline in property prices would not impact the operating balance but would reduce net worth.
### Note 2: Key Assumptions and Judgements (continued)

Long term liabilities such as the ACC liability $56.6 billion (2018: $43.3 billion) and the GSF retirement plan $13.2 billion (2018: $11.0 billion) are particularly sensitive to the assumptions associated with estimating discounted cash flows. The table below outlines the sensitivity of those liabilities to key assumptions:

Note 2: Key Assumptions and Judgements (continued)

Areas of significant estimation

These financial statements include estimated amounts that have a number of uncertainties (discussed below).

<table>
<thead>
<tr>
<th>Key estimation</th>
<th>Basis of estimation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recognition of tax revenue and associated</td>
<td>The New Zealand tax system is predicated on self-assessment where taxpayers are expected to understand the tax laws and comply with them. This has an impact on the completeness of tax revenues when taxpayers fail to comply with tax laws, for example, if they do not report all of their income.</td>
</tr>
<tr>
<td>receivables</td>
<td></td>
</tr>
<tr>
<td>Income tax</td>
<td>Income tax revenue is recognised on an accruals basis in the period the taxable event occurs. It is deemed to accrue evenly over the period to which it relates.</td>
</tr>
<tr>
<td></td>
<td>Where income tax returns have not been filed for the relevant period, accrued income tax revenue receivable or payable has been estimated based on current provisional assessments or prior year provisional or terminal assessments. The outcome of income tax revenue and refunds is not known with certainty until income tax returns for the period have been filed. This usually occurs sometime after the publication of these financial statements.</td>
</tr>
<tr>
<td></td>
<td>The measurement of the tax revenue accruals requires significant estimates. Key features of the estimation used include:</td>
</tr>
<tr>
<td></td>
<td>• Where taxpayers subject to the provisional tax regime have not yet filed a terminal tax assessment for the period, provisional tax assessments are accrued based on the provisional tax method adopted by the taxpayer.</td>
</tr>
<tr>
<td></td>
<td>• Where taxpayers have made payments to Inland Revenue but have not submitted a provisional tax assessment for the period or where the payment is more than the provisional tax assessment submitted, their credit balance is accrued as revenue.</td>
</tr>
<tr>
<td></td>
<td>• For taxpayers not subject to provisional tax, an estimate is made of the tax revenues receivable and refundable based on prior year returns.</td>
</tr>
</tbody>
</table>

Change in estimations

Over recent years, Inland Revenue (IR) have been working to improve the processes used to recognise income tax revenue through IR’s business transformation programme. This year further refinements were achieved as a result of the administration of income tax moving to IR’s new system, START (Simplified Tax and Revenue Technology). The improvements from START include a new process for the estimation of income tax with income tax now estimated for all taxpayers every month based on their provisional tax method. Previously income tax was recognised based on provisional tax due and forecast provisional tax payments. This process change has had the effect of bringing forward the recognition of some tax revenue for the 2018/19 fiscal year. The Budget 2019 fiscal forecasts assumed a transitional adjustment, increasing tax revenue by $0.6 billion in the 2018/19 fiscal year. Due to the fundamental differences between the models, it is not practical to estimate the effect of the change on current and future years.
Note 2: Key Assumptions and Judgements (continued)

<table>
<thead>
<tr>
<th>Key estimation</th>
<th>Basis of estimation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electricity generation assets</td>
<td>These financial statements report the value of electricity generation assets at $17.2 billion (2018: $15.9 billion). The assets are made up mainly of hydro, thermal stations and wind farms owned by three electricity generation mixed ownership model entities. There are a range of reasonable judgements and assumptions that could be used in estimating the fair value of these assets. These judgements and assumptions predominantly relate to future revenue streams (eg, wholesale electricity prices, generation volumes) and operating expenses, as well as the discount rate used to calculate the present value of those revenues and expenses. The assumptions and sensitivity analysis of these are set out in note 16. These key assumptions are subject to significant uncertainties driven by unobservable market data, such as growth expectations within various sectors of the economy, planned capital projects and varying risk factors. These assumptions interact dynamically with each other. For example, wholesale electricity prices can affect the amount of generation volumes and operating costs.</td>
</tr>
<tr>
<td>State Highway network (excluding land)</td>
<td>These financial statements report the value of the state highway network at $37.2 billion (2018: $31.7 billion). There are necessarily significant assumptions and judgements required in determining the replacement values assigned to different components (pavement, formation, bridges, etc) of the state highway network, the appropriate overhead cost factors to apply and the life of component assets for depreciation. These assumptions and sensitivity analysis are set out in note 16.</td>
</tr>
</tbody>
</table>

Other uncertainties

In addition to those items in the statement of financial position there are a number of liabilities or assets that may arise in the future but are not currently recognised. This is because they are dependent on uncertain future events occurring or the liability/asset cannot be measured reliably. If these contingencies crystallise, there will be an associated impact on the operating balance and net worth of the Crown. These contingencies are reported in note 25 of these financial statements.

Risk management

The Crown’s financial position at balance date is exposed to risks through possible changes in the key assumptions and judgements described above that could materially impact on the value of the Crown’s assets and liabilities.

The Crown’s current risk management framework generally involves holding individual government reporting entities responsible for managing the risks that they individually face, subject to legislation and central guidance such as the Public Finance Act 1989 and Treasury Instructions. Government-wide financial resilience is supported through relatively low debt levels, a strong financial position and effective budgeting.

With respect to its financial portfolios, the Government’s financial instrument holdings expose it primarily to the financial risks of changes in interest rates, foreign exchange rates, risk of default and liquidity risk. These risks are managed at portfolio level consistent with the policy purpose of the portfolio and risk management objectives. Detailed information on the exposure to market risk and policies for managing this risk are available in the separate financial statements prepared by the entities who manage each portfolio.

The Government’s exposure to market risk reflects the combination of these portfolio management practices. These practices include use of Value-at-Risk (VaR) limits and stop-loss limits to manage risk. While the Treasury and the Reserve Bank’s activities collectively manage the core Crown’s exposure to foreign exchange, there is no other centralised management of market or other risk.

There has been no significant change from the previous year to the manner in which the Government reporting entities that manage the Government’s portfolios, manage and measure risks.

Derivative financial instruments are often used across the portfolios to manage exposure to interest rate, and foreign currency risk. Refer to pages 131 and 132 for further derivative information.

\(^1\) Includes customs excise-equivalent duty.

More detailed unaudited information on tax revenue and receipts can be found at www.treasury.govt.nz/government/revenue/taxoutturn

The Government provides many services and benefits that do not give rise to revenue. Further, payment of tax does not of itself entitle a taxpayer to an equivalent value of services or benefits. Such revenue is received through the exercise of the sovereign power of the Crown in Parliament.
Note 3: Sovereign Revenue (continued)

Tax revenue is recognised when a tax recognition point has occurred and the tax revenue can be reliably measured as described in the table below.

<table>
<thead>
<tr>
<th>Revenue type</th>
<th>Revenue recognition point</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

Revenue from the supply of goods and services to third parties is measured at the fair value of consideration received.

Revenue from the supply of goods is recognised when the significant risks and rewards of ownership have been transferred to the buyer. Revenue from the supply of services is recognised on a straight-line basis over the specified period for the services unless an alternative pattern of recognition better represents the stage of completion of the transaction.

---

1 Student loans are advanced on an interest-free basis and repayments are income-contingent, therefore they are discounted to reflect their fair value. The interest unwind reflects the increase in value as the period to repayment reduces (refer note 15). Valuation of student loans changed with the adoption of PBE IFRS 9. Effective from 1 July 2018 these are measured at fair value through the operating balance (FVTOB) (see note 27 for more details), and the interest unwind has been calculated using the market discount rate at the beginning of the year (refer note 15). In 2018, when student loans were classified as amortised cost, the interest unwind was calculated using the effective interest method based on the interest rates allocated in the year loans were drawn down.

2 Financial assets classified as held for trading category was removed by PBE IFRS 9. For more details please refer to note 27.
Note 5: Investment Income/ (Expense) (continued)

Interest revenue and expense on financial assets and financial liabilities classified at amortised cost is accrued using the effective interest method. The effective interest rate discounts estimated future cash receipts/payments through the expected life of the financial instrument’s net carrying amount. The method applies this rate to the principal outstanding to determine interest revenue or expense each period. This means interest is allocated at a constant rate of return over the expected life of the financial instrument based on the estimated cash flows.

Interest revenue on financial assets classified as fair value through the operating balance is recognised as it accrues.

The interest unwind on student loans reflects the increase in value of the loans as the period to repayment reduces. Student loans are classified as fair value through the operating balance and the interest unwind is calculated using the market discount rate at the beginning of the year.

Gains and losses may be reported in the Statement of Financial Performance when assets and liabilities are revalued in certain circumstances as described in the accounting policies for those assets and liabilities. For the purposes of reporting the operating balance before gains and losses (OBEGAL) these gains and losses are excluded from total revenue and total expenses; and presented elsewhere in the Statement of Financial Performance.

Rental revenue is recognised in the statement of financial performance on a straight-line basis over the term of the lease. Lease incentives granted are recognised evenly over the term of the lease as a reduction in total rental revenue.

Dividend revenue from investments is recognised when the Government’s rights as a shareholder to receive payment have been established.

1 Rental revenue has been restated for Budget 2018 to eliminate the income related rent subsidy between government reporting entities consistent with the approach taken in Budget 2019 and June actuals.

</tbody>
</table>

Welfare benefits and entitlements, including New Zealand Superannuation, are recognised as an expense in the period when an application for a benefit has been received and the eligibility criteria have been met.

¹ The income related rent subsidy has been restated for Budget 2018 to eliminate the subsidies between government reporting entities, consistent with the approach taken in Budget 2019 and June actuals.
Note 8: Personnel Expenses

Employee entitlements to salaries and wages, annual leave, long service leave, retiring leave and other similar benefits are recognised as an expense in the statement of financial performance when they accrue to employees. Employee entitlements to be settled within 12 months are reported at the amount expected to be paid. The liability for long-term employee entitlements is reported as the present value of the estimated future cash outflows.

Obligations for contributions to defined contribution retirement plans are recognised in the statement of financial performance as they fall due. Obligations for defined benefit retirement plans are recorded at the latest actuarial value of the Crown liability. All movements in the liability, including actuarial gains and losses, are recognised in full in the statement of financial performance in the period in which they occur.

Termination expenses are recognised in the statement of financial performance only when there is a demonstrable commitment to either terminate employment prior to normal retirement date or as the expense arises as a result of an offer to encourage voluntary redundancy. Termination expenses settled within 12 months are reported at the amount expected to be paid, otherwise they are reported as the present value of the estimated future cash outflows.

Key management personnel compensation was $10 million (2018: $11 million). This reflects salaries, benefits and allowances. Key management personnel are the 27 Ministers of the Crown who are members of the Executive Council (including the Prime Minister) as at 30 June 2019 (2018: 28).

The Ministers’ remuneration and other benefits are set out by the Remuneration Authority under the Members of Parliament (Remuneration and Services) Act 2013. Members of Parliament, including members of the Executive, have access to other non-cash entitlements as determined by the Speaker of the House of Representatives. Details of these entitlements (eg, travel discounts) can be found on the New Zealand Parliament website (www.parliament.govt.nz).

Note 9: Other Operating Expenses (continued)

Where grants and subsidies are at the Government’s discretion until payment, the expense is recognised when the payment is made. Otherwise, the expense is recognised when the specified criteria for the grant or subsidy have been fulfilled and notice has been given to the government.

Operating leases, where the lessor substantially retains the risks and rewards of ownership, are recognised in a systematic manner over the term of the lease. Leasehold improvements are capitalised and the cost is amortised over the unexpired period of the lease or the estimated useful life of the improvements, whichever is shorter. Lease incentives received are recognised evenly over the term of the lease as a reduction in rental expense.

Other operating expenses relate to those expenses incurred in the course of undertaking the functions and activities of entities included in the financial statements of the Government, excluding those expenses separately identified in the statement of financial performance and other notes.

Audit fees paid to the Controller and Auditor-General

Audit fees paid to the Controller and Auditor-General for the audit of the financial statements of the Government and its reporting entities were $46.5 million (2018: $42.0 million). These fees include $0.3 million (2018: $0.2 million) for the audit of these financial statements. Other fees for assurance and related services paid to the Controller and Auditor-General were $0.7 million (2018: $1.5 million). As the Controller and Auditor-General is part of the Government reporting entity, these fees are eliminated on consolidation.

Note 10: Net Gains and Losses on Non-Financial Instruments

The ACC and GSF liabilities are valued by an independent actuary (refer notes 11 and 20). Actuarial gains/(losses) represent differences between actual results and what the actuary had assumed when previously calculating the liability and the effect of changes in actuarial assumptions (experience adjustments).

Note 11: Insurance

At 30 June 2019 and 30 June 2018 the total amount paid or payable for damage in relation to the Canterbury earthquakes was reassessed and is now expected to be lower than previously expected. This reduction is recognised as a credit in the claims expense for Southern Response.
Note 11: Insurance (continued)

| 2019 Forecast at Budget |  | Actual 30 June |  |  |
|-------------------------|-----------------|-----------------|-----------------|
|                         | 2018 $m | 2019 $m | 2019 $m | 2018 $m |
| Insurance liability by entity | | | | |
| ACC liability | 44,285 | 48,441 | 56,611 | 43,314 |
| EQC property damage liability | 411 | 986 | 1,342 | 1,453 |
| Southern Response liability | - | 186 | 216 | 401 |
| Other (incl. Inter-segment eliminations) | 36 | 181 | 195 | 126 |
| Total insurance liabilities | 44,732 | 49,794 | 58,364 | 45,294 |

By component

| | Outstanding claims liability | 54,834 | 42,351 |
| | Unearned premium liability | 2,295 | 2,134 |
| | Unearned premium liability deficiency | 1,235 | 809 |
| Total insurance liabilities | 58,364 | 45,294 |

By maturity

| | Expected to be settled within one year | 8,996 | 6,920 |
| | Expected to be outstanding for more than one year | 49,368 | 38,374 |
| Total insurance liabilities | 58,364 | 45,294 |

Assets arising from insurance obligations are:

| | Receivables for premiums | 3,475 | 2,381 |
| | Reinsurance claim recoveries | 635 | 236 |

The future cost of outstanding insurance claims liabilities are valued based on the latest actuarial information. The liability includes estimated payments associated with claims reported and accepted, claims incurred but not reported, claims that may be re-opened, and the costs of managing these claims. Movements of the claims liabilities are reflected in the statement of financial performance. Financial assets backing these liabilities are designated at fair value through the operating balance.

Further information on these liabilities may also be found in the annual reports of each of these entities and on their respective websites. The objectives, policies and procedures for managing these risks are set out in the governing statutes and policy documents of each entity.

All assets held by the three insurance entities are considered available to back present and future claims obligations. There are no deferred acquisition costs (eg, marketing costs) in respect of insurance obligations at the reporting date. In addition each of these entities is backed by a guarantee from the Crown.

The outstanding claims liability is the present value of the central estimate of expected payments for claims incurred plus a risk margin. The unearned premium liability represents premiums received to provide insurance cover after 30 June 2019. The unearned premium liability deficiency is the extent that the unearned premium liability is insufficient to cover expected future claims (ie, payments for future accidents within the period covered by the premiums received).

The remainder of this note provides detailed analysis of the ACC insurance expense and liability. ACC’s insurance obligations arise primarily from the accident compensation scheme provision of no fault personal injury cover for all New Zealand citizens, residents and temporary visitors to New Zealand.

Analysis of ACC insurance liability

An independent actuarial estimate by Taylor Fry, consulting actuaries, has been made of the future expenditure relating to accidents that occurred prior to balance date, whether or not the claims have been reported to or accepted by ACC. The actuaries are satisfied with the nature, sufficiency and accuracy of the data used to determine the outstanding claims liability.

Note 11: Insurance (continued)

Key Assumptions

The key assumptions and the methodology applied in the valuation of the outstanding ACC claims obligation are as follows:

(i) Risk-free discount rates

The projected cash flows were discounted using a series of forward discount rates at the balance date derived from the yield curve for New Zealand government bonds. The equivalent single effective discount rate taking into account ACC's projected future cash flow patterns is a short term discount rate of 2.42% (2018: 3.51%) and a long term discount rate of 4.30% beyond 53 years (2018: 4.75% beyond 39 years).

(ii) Risk margin

The outstanding claims liability includes a risk margin that relates to the inherent uncertainty in the central estimate of the present value of expected future payments. The overall risk margin is intended to achieve a 75% probability of sufficiency in meeting the actual amount of liability to which it relates.

(iii) Inflation and indexation

ACC claims and costs are subject to inflation. Some costs are assumed to increase faster than the general rate of inflation (referred to as superimposed inflation) due to factors such as innovation in medical treatment.

(iv) Rehabilitation rate

Assumptions for rehabilitation rate were set with reference to past observed experience with allowance for expectations of the future that is believed to be reasonable under the circumstances.

(v) Liability adequacy test

An unearned premium liability deficiency is recognised when the amount of the present value of expected future claim cash outflows, plus a risk margin, exceeds the unearned premium liability.
Note 11: Insurance (continued)

Summary of assumptions

Average weighted term to settlement from reporting date
- 30 June 2019: 16 years
- 30 June 2019 (Next Year): 16 years
- 30 June 2018: 8 months
- 30 June 2018 (Next Year): 8 months

Weighted average risk margin
- 30 June 2019: 13.0%
- 30 June 2019 (Next Year): 13.0%
- 30 June 2018: 75.0%
- 30 June 2018 (Next Year): 75.0%

Probability of adequacy of liability
- 30 June 2019: 75.0%
- 30 June 2019 (Next Year): 75.0%
- 30 June 2018: 13.0%
- 30 June 2018 (Next Year): 13.0%

Weighted average risk margin for liability adequacy test
- 30 June 2019: 13.0%
- 30 June 2019 (Next Year): 13.0%
- 30 June 2018: 75.0%
- 30 June 2018 (Next Year): 75.0%

Probability of adequacy of liability to cover unearned premiums
- 30 June 2019: 75.0%
- 30 June 2019 (Next Year): 75.0%
- 30 June 2018: 13.0%
- 30 June 2018 (Next Year): 13.0%

Risk-free discount rate
- 30 June 2019: 1.3%
- 30 June 2019 (Next Year): 1.0% to 4.3%
- 30 June 2018: 1.8% to 4.8%

Inflation rates (excluding superimposed inflation):

Weekly compensation
- 30 June 2019: 2.0%
- 30 June 2019 (Next Year): 1.9% to 2.2%
- 30 June 2018: 1.9%
- 30 June 2018 (Next Year): 1.9% to 2.2%

Impairment benefits
- 30 June 2019: 1.5%
- 30 June 2019 (Next Year): 1.7% to 2.0%
- 30 June 2018: 1.9%
- 30 June 2018 (Next Year): 1.7% to 2.0%

Social rehabilitation benefits (serious and non serious injury)
- 30 June 2019: 1.9%
- 30 June 2019 (Next Year): 1.9% to 2.2%
- 30 June 2018: 2.2%
- 30 June 2018 (Next Year): 2.2%

Hospital rehabilitation benefits
- 30 June 2019: 1.9%
- 30 June 2019 (Next Year): 1.9% to 2.2%
- 30 June 2018: 1.9%
- 30 June 2018 (Next Year): 1.9%

Medical costs
- 30 June 2019: 1.9%
- 30 June 2019 (Next Year): 1.9% to 2.2%
- 30 June 2018: 1.9%
- 30 June 2018 (Next Year): 1.9%

Superimposed inflation:

Social rehabilitation benefits (serious injury care)
- 30 June 2019: 1.4%
- 30 June 2019 (Next Year): 0.0% to 0.2%
- 30 June 2018: 2.0%
- 30 June 2018 (Next Year): 0.0% to 0.3%

Social rehabilitation benefits (serious injury capital expenditure)
- 30 June 2019: 0.7%
- 30 June 2019 (Next Year): 0.8% to 3.2%
- 30 June 2018: 0.7%
- 30 June 2018 (Next Year): 0.8% to 3.2%

Hospital rehabilitation benefits
- 30 June 2019: 3.0%
- 30 June 2019 (Next Year): 3.0%
- 30 June 2018: 3.0%
- 30 June 2018 (Next Year): 3.0%

Medical costs (GPs)
- 30 June 2019: 2.0%
- 30 June 2019 (Next Year): 2.0%
- 30 June 2018: 3.0%
- 30 June 2018 (Next Year): 3.0%

Medical costs (Radiology)
- 30 June 2019: 2.0%
- 30 June 2019 (Next Year): 2.0%
- 30 June 2018: 2.0%
- 30 June 2018 (Next Year): 2.0%

Medical costs (Physiotherapists)
- 30 June 2019: 2.0%
- 30 June 2019 (Next Year): 2.0%
- 30 June 2018: 2.0%
- 30 June 2018 (Next Year): 2.0%

Medical costs others (specialists)
- 30 June 2019: 2.0%
- 30 June 2019 (Next Year): 2.0%
- 30 June 2018: 2.5%
- 30 June 2018 (Next Year): 2.5%
## Note 11: Insurance (continued)

### Sensitivity Analysis

The present value of the ACC claims obligation is sensitive to underlying assumptions such as the discount rate, inflation rates and expected medical costs. These assumptions are closely linked. For example, a change to the discount rate may have implications on the inflation rate used. Therefore, when calculating the present value of claims it is unlikely that an assumption will change in isolation.

If the assumptions described above were to change in isolation, this would impact the measurement of the ACC claims obligation as per the table below:

### Undiscounted outstanding claims liability

The reported outstanding claims liability (before risk margin) of $47,191 million (2018: $35,952 million) represents the net present value of estimated cash flows associated with this obligation. The following table represents the timing of future undiscounted cash flows for claims to 30 June 2019. These estimated cash flows include the effects of assumed future inflation.

**Undiscounted outstanding claims liability**

87,054 83,021
Note 12: Receivables

Receivables arising from sovereign revenue will be initially recognised at fair value. These receivables are subsequently adjusted for penalties and interest as they are charged, and as they are tested for impairment. Interest and penalties charged on tax receivables are presented as tax revenue in the statement of financial performance. Reinsurance receivables on paid claims and outstanding claims, are recognised as revenue in the statement of financial performance.

Receivables from taxes, levies and fines (and any penalties associated with these activities) as well as social benefit receivables which do not arise out of a contract are collectively referred to as sovereign receivables.

In determining the recoverability of a tax or other sovereign receivables, the Government uses information about the extent to which the tax or levy payer is contesting the assessment and experience of the outcomes of such disputes, from lateness of payment, and other information obtained from credit collection actions taken. Due to the size of the tax base, the concentration of credit risk is limited and this is not a risk that is actively managed.

The Government does not hold any collateral or any other credit enhancements over receivables.

Tax receivables, ACC levy receivables and social benefit receivables are considered to be short term, so their carrying value represents a reasonable approximation of their fair value.

Other levies, fines and penalty receivables comprise debtor portfolios administered by Ministry of Justice (ie, court fines) and Inland Revenue (ie, child support). These receivables are recorded at fair value, which on initial recognition represent the face value of the amount owed to the Crown, adjusted to reflect the amount expected to be recoverable. For the current year the initial adjustment from face value to fair value of these receivables was $230 million (2018: $201 million), with $161 million (2018: $137 million) of the adjustment relating to child support debt administered by Inland Revenue.

Social benefit receivables comprise benefit overpayments, advances on benefits and recoverable special needs grants primarily administered by the Ministry of Social Development.

Trade and other receivables are relatively short term, with $4,406 million (2018: $5,668 million) expected to be settled in the next year. Their carrying amount provides a reasonable approximation of their fair value.
Note 12: Receivables (continued)

The Inland Revenue Department (IRD) administers the majority of the tax receivable portfolio. The recoverable amount of the portfolio is calculated by forecasting the expected repayments based on analysis of historical debt data, deducting an estimate of service costs and then discounting at the current market rate of 5.0% (2018: 5.0%).

If the recoverable amount of the portfolio is less than the carrying amount, the carrying amount is reduced to the recoverable amount. Alternatively, if the recoverable amount is more, the carrying amount is increased.

Tax receivables are classified as past due when any outstanding tax is not paid by the taxpayer's due date. IRD has debt management policies and procedures to actively manage the collection of past due debt.

Marketable securities comprise bonds, commercial paper, debentures and similar tradable financial assets held by the Government for the purposes of realising capital gains or interest revenue. Long-term deposits are instruments with maturities greater than three months that are not traded in an active market.

Further information is provided on these financial assets in note 26.
Note 14: Share Investments

Share investments are reported at fair value. The fair value of listed share investments is based on quoted market prices. The fair value of unlisted share investments is determined from the initial cost of the investment and adjusted for performance of the business and changes in equity market conditions since purchase.

Further information is provided on these financial assets in note 26.

Note 15: Advances

Kiwi Group Holdings loans and advances are measured at amortised cost. The fair value of Kiwi Group Holdings loans and advances is $20,448 million (2018: $18,350 million). This fair value is based on a discounted cash flow model with reference to market interest rates, prepayment rates and estimated credit losses.

Kiwi Group Holdings loans and advances include a provision for expected credit losses of $40 million.
Notes to the Financial Statements

Note 15: Advances (continued)

Amounts recognised in the statement of financial performance in respect to student loans are as follows:

Total student loans: 9,217 10,085

By maturity

- Expected to be repaid within one year: 1,398 1,333
- Expected to be outstanding for more than one year: 9,333 7,968

Total student loans: 10,731 9,301

Movement During the Year

- Opening balance: 9,301 9,197
- Impact of adoption NZ PBE IFRS 9: 27 628 -
- Net new lending (including fees): 1,361 1,336
- Initial write-down to fair value: (563) (594)
- Repayments made during the year: (1,371) (1,348)
- Interest unwind: 5 394 604
- Movement in impairment during the year: - 106
- Unwind of administration costs: 36 -
- Experience/actuarial adjustments:
  - Projected repayments: 211 -
  - Change in discount rates: 734 -

Closing balance student loans: 10,731 9,301

Student loans are recognised initially by writing the amount lent down to fair value. Subsequently student loans are measured at fair value through the operating balance.

Fair value is the amount for which the loans could be exchanged between knowledgeable, willing parties on an arm’s-length basis.

Fair value on initial recognition of student loans is determined by projecting forward estimated repayments from borrowers under the scheme and discounting them back at an appropriate discount rate.

Amended PBE IFRS 9 accounting standard changes the student loan measurement from amortised cost to fair value, leading to gains and losses now being recognised, rather than impairment expenses.
Note 15: Advances (continued)

The student loan scheme is intended to provide a cost effective means of enabling a wide range of people to access tertiary education, gaining knowledge and skills that enhance the economic and social wellbeing of New Zealand. No interest on loans to New Zealand residents is charged and there are no repayments required from those with very low incomes. Loans of those who die or become bankrupt are written off.

The Crown has early adopted PBE IFRS 9: Financial Instruments from 1 July 2018. As loan repayments are contingent on the income of borrowers, student loans do not meet the PBE IFRS 9 criteria for measurement at amortised cost and therefore, are now subsequently measured at fair value through the operating balance. Under the previous standard, PBE IPSAS 29, Student loans were deemed to be loans and receivables valued at amortised cost using the effective interest rate method, adjusted for impairments.

Advances and taxpayers’ funds have increased by $628 million at 1 July 2018 for the reclassification from amortised cost to fair value. The increase relates to a change in the discount rate used to present value expected repayments. Under fair value, the entire loan book is be revalued using current market discount rates at each balance date. Previously, under amortised cost, market discount rates were applied for each year of lending and locked in for the duration of the loan. Refer to note 27 for further details.

The valuation of student loans is performed each year using actuarial and predictive models which reflect current student loan policy and macroeconomic assumptions. As such, the carrying value is sensitive to changes in a number of underlying assumptions, including future income levels, repayment behaviour and macroeconomic factors such as inflation and discount rates.

The table below outlines the sensitivity of student loans fair value to discount rates

Through everyday operations of the student loan scheme the Government is exposed to the risk that borrowers will default on their obligation to repay their loans or die before their loan is repaid. The student loan scheme does not require borrowers to provide any collateral or security to support their borrowings. As the total sum advanced is widely dispersed over a large number of borrowers, the scheme does not have any material concentrations of credit risk. The credit risk is reduced by collection of repayments through the tax system.

The Student Loan Scheme Annual Report contains more information on the student loan scheme. This can be found at: http://www.educationcounts.govt.nz/publications/series/student_loan_scheme_annual_reports

Comparatives have been restated for specified cultural and heritage assets to align the treatment of accumulated depreciation on revaluation with the Crown’s accounting policy.
Note 16: Property, Plant and Equipment (continued)

Items of Property, Plant and Equipment (PPE) are initially recorded at cost. Cost may include transfers from net worth of any gains or losses on qualifying cash flow hedges of foreign currency purchases of PPE. Where an asset is acquired for nil or nominal consideration the asset is recognised initially at fair value, where fair value can be reliably determined, as revenue in the statement of financial performance.

Generally, Government borrowings are not directly attributable to individual assets. Therefore, borrowing costs incurred during the period, including any that could be allocated as a cost of completing and preparing assets for their intended use are expensed rather than capitalised.

Subsequent to initial recognition, classes of PPE are accounted for as set out below.

Revaluations are carried out for a number of classes of PPE to reflect the service potential or economic benefit obtained through control of the asset. Revaluation is based on the fair value of the asset, with changes reported by class of asset.

Classes of PPE that are revalued are revalued at least every five years or whenever the carrying amount differs materially to fair value.

Items of PPE are revalued to fair value for the highest and best use of the item on the basis of the market value of the item, or on the basis of market evidence, such as discounted cash flow calculations. If no market evidence of fair value exists, an optimised depreciated replacement cost approach is used as the best proxy for fair value. Where an item of PPE is recorded at its optimised depreciated replacement cost, this cost is based on the estimated present cost of constructing the existing item of PPE by the most appropriate method of construction, less allowances for physical deterioration and optimisation for obsolescence and relevant surplus capacity. Where an item of PPE is recorded at its optimised depreciated replacement cost, the cost does not include any borrowing costs.

When an item of PPE is revalued, any accumulated depreciation at the date of revaluation is eliminated against the gross carrying amount of the asset and the net amount restated to the revalued amount of the asset.

Unrealised gains and losses arising from changes in the value of PPE are recognised as at balance date. To the extent that a gain reverses a loss previously charged to the statement of financial performance for the asset class, the gain is credited to the statement of financial performance. Otherwise, gains are added to an asset revaluation reserve for that class of asset. To the extent that there is a balance in the asset revaluation reserve for the asset class, any loss is deducted from that reserve. Otherwise, losses are reported in the statement of financial performance.

Depreciation is charged on a straight-line basis at rates calculated to allocate the cost or valuation of an item of PPE, less any estimated residual value, over its remaining useful life.

</tr>
</tbody>
</table>

Under Section 55 of the Public Finance Act 1989, borrowing by the Crown is a charge on the revenue of the Crown equally and rateably. Therefore, no PPE owned by the Crown has been pledged as security for liabilities. Government-owned PPE is, however, subject to a significant number of legislative and policy restrictions with respect to its use and disposal. PPE owned by State-owned Enterprises and mixed ownership companies has been pledged to secure borrowings and finance lease obligations of $3,691 million (2018: $3,761 million).

Accounting policy

State highways are recorded on an ODRC basis representing the cost of replacing the network asset in its current condition. The valuation reflects the estimated present cost of constructing the existing asset by the most appropriate method of construction, reduced by allowances for the age and condition of the asset (depreciation). The estimated current cost is expected to change over time.

Estimated useful lives

- Formation – Permanent
- Pavement structure (subbase) – Permanent
- Pavement structure (base course) – 50 years
- Pavement surface – 9 to 14 years
- Bridges 90 to 100 years

Valuation information

<td>A full valuation is completed annually where the majority of assets are indexed. The latest valuation was completed as at 30 June 2019.</td>
</tr>
</tbody>
</table>

WSP Opus, an independent valuer, determined the valuation of the state highway as at 30 June 2019 by assigning replacement costs to the components of the state highway reported in the Road Assessment and Maintenance Management (RAMM) database and other databases as at 30 June 2018. The net capital expenditure for the year to 30 June 2019 was added to this data. The costs assigned are adjusted depending on the region and the type of terrain. The replacement cost is also adjusted for depreciation to reflect the current age and condition of the physical components. The major components of the state highway network and the optimised depreciated replacement cost of those components are shown in the table above.

State highway net revaluations increased by $3.5 billion in 2018/19. This was driven by NZTA’s continuing valuation improvement programme and changes in estimates and assumptions including updates by an independent cost estimator (BondCM). The two most significant areas of uplift are:

- unit prices applied to formation costs were reviewed and some carriageways were reclassified to more appropriate formation terrain types for recently completed projects. This resulted in an uplift of $1.8 billion, and
- the inclusion of a unit rate for brownfield costs applied to the overhead rate resulted in an uplift of $1.2 billion.
Note 16: Property, Plant and Equipment (continued)

Significant estimates and assumptions have been applied to the valuation, which include assumptions on: quantities used in the construction of state highway components, the unit cost to apply and the life of the assets. Changes to these underlying estimates and assumptions can cause a material movement in the valuation and are reviewed on a periodic basis. The main assumptions affecting the state highway valuation are:

<td>$3,237</td>
</tr>
<tr>
<td>Motorway ramps ($/m2)</td>
<td>$4,967</td>
<td>$4,686</td>
</tr>
</tbody>
</table>

The range of costs in the above table reflect regional variation and the differing costs of construction depending on terrain.

In addition, assumptions are made about the completeness of the RAMM database. These assumptions are used in determining additional items to be added so the complete network is valued. RAMM also contains assumptions to ensure appropriate allocation of all assets by region and terrain type, and on matters such as base course depth, subbase depth, shoulder formation, base course and retaining walls.

The following sensitivity analysis represents possible impacts on the state highway network valuation based on changes to estimates:

<table>
<thead>
<tr>
<th>Movement</th>
<th>2019 ($m)</th>
<th>2018 ($m)</th>
</tr>
</thead>
<tbody>
<tr>
<td>External professional fees from 12% to 13.15% (2018: from 12% to 22%)²</td>
<td>188</td>

</tr>
<tr>
<td>Preliminary &amp; general costs from 34.3% to 37.7%</td>
<td>931</td>
<td>788</td>
</tr>
<tr>
<td>Formation unit costs increase or decrease by 10%</td>
<td>1,288/(1,288)</td>
<td>1,064/(1,064)</td>
</tr>
<tr>
<td>Unit costs of bridges, culverts, pavements, railings and barriers increase or decrease by 10%</td>
<td>1,613/(1,613)</td>
<td>1,522/(1,522)</td>
</tr>
<tr>
<td>Brownfield costs increase or decrease by 10% (new sensitivity in 2018/19)</td>
<td>124/(124)</td>
<td>N/A³</td>
</tr>
</tbody>
</table>

WSP Opus has performed simulation analysis on the valuation to quantify the range of valuation outcomes that could occur as a result of changes in the different valuation inputs.

WSP Opus has concluded that the overall valuation is between -7.5% to +10% of the current value (-$2.8 billion to +$3.7 billion).

² The 2018/19 sensitivity range was updated to reflect a more expected change in the assumption
³ This is a new sensitivity in 2018/19. 2018/19 was the first year an overhead rate has been applied for brownfield costs.

</tbody>
</table>

There are a number of key assumptions used to value electricity generation assets. These judgements and assumptions predominantly relate to future revenue streams (eg, wholesale electricity prices, generation volumes) and operating expenses, as well as the discount rate used to calculate the present value of those revenues and expenses.

The following tables provide information on each of the entities’ key assumptions as disclosed in the individual annual reports of the individual electricity generation companies (part of the State-owned Enterprises segment). The electricity price path assumptions, stated below, for each electricity generation company are substantially the same. However, the Meridian Energy and Mercury NZ assumption is conveyed in real terms while Genesis Energy’s assumption is in nominal terms.

There are a range of reasonable judgements and assumptions that could be used in estimating the fair value of these assets. These key assumptions are subject to significant uncertainties driven by unobservable market data, such as growth expectations within various sectors of the economy, planned capital projects and varying risk factors. These assumptions interact dynamically with each other. For example, wholesale electricity prices can affect the amount of generation volumes and operating costs.

Accounting policy

The Rail Network is recorded on an ODRC basis representing the cost of replacing the network asset in its current condition. This is a change from the approach in previous years (see explanation below). The valuation reflects the estimated present cost of constructing the existing asset by the most appropriate method of construction, reduced by allowances for the age and condition of the asset (depreciation). The estimated current cost is expected to change over time.

</tbody>
</table>

The rail network comprises around 3,700 kilometres of track (excluding yards and sidings) and is used primarily for freight transport. In addition to freight, the network is used by KiwiRail for long distance passenger transport and access is provided to two regional authorities, Greater Wellington Regional Council and Auckland Transport for metro passenger services. Some tracks are dual purpose (ie, used for both freight and metro), however there are a number of tracks which serve metro transport only (eg, the Johnsonville line). The rail infrastructure earns revenue from freight and long distance passenger charges. In addition, network access charges are collected from the two regional authorities in relation to the metro services.

Since the restructuring of KiwiRail as a profit-oriented entity in 2012, the rail network infrastructure used for freight services (including dual use assets required for freight operations) has been measured at fair value, reflecting the recoverable amount that could be expected to be received from a third party in an orderly transaction. The portion of dual use assets not required for freight operations and metro only assets were reported in these financial statements at an optimised depreciated replacement cost basis, as the community benefits enabled by this investment do not provide a return at the whole-of-Government level.

Last year’s financial statements reported that the Government had initiated a Review of Rail, recognising the challenges in making investment decisions, marrying the duality of commercial “for profit” activities that align with an SOE's commercial mandate with other “public benefit” activities that deliver social benefits rather than commercial returns, and integrating relatively short-term funding commitments with prudent investment decisions for long-life assets such as rail infrastructure. The findings of the Review of Rail were reported to Ministers in May 2019, who noted that all rail, including freight, contributes to national and regional economic growth and reduces emissions and congestion, reduces road deaths and injuries, facilitates wider social benefits, and provides resilience and connection between communities. The report also noted the necessity of continued commercial disciplines and focus of KiwiRail to support efficiency in asset management, and to drive commercial returns from the provision of freight, property and tourism operations. Cabinet agreed in principle to a resilient and reliable rail system to deliver on the outcomes for transport and wider benefits the Government seeks, and budget decisions were taken on that basis.

As a consequence it is no longer appropriate at the whole-of-government level to reflect the rail freight network as a cash generating asset (ie, at its recoverable amount) given the wider reasons for the Crown’s investment in the rail infrastructure. This changed view at a whole-of-government level does not affect the treatment of the assets in the financial statements of KiwiRail itself, as it remains a profit-oriented entity.

The impact is to increase the value to $6.3 billion, compared to a value of $1.0 billion that would be reported on the previous basis. In 2012, when the previous approach was adopted, an impairment expense of $1.4 billion was recorded in OBEGAL. Of the $5.2 billion increase in valuation this year, the accounting treatment reinstating the ODRC approach resulted in a $2.3 billion increase to the revaluation reserves and a $2.6 million reversal of impairment expense in the Statement of Financial Performance which includes the loss of $1.4 billion recorded in 2012. The Statement of Financial Performance impact is disclosed in note 9.

The assets in a public private partnership (PPP) are recognised as assets of the Government. As the assets are progressively constructed, the Government recognises work-in-progress at cost. At the same time a financial liability of the same value is also recognised. When the assets are fully constructed, the total asset cost and the matching financial liability reflect the value of the future compensation to be provided to the private-sector partner for the assets.

Details on individual PPP’s can be found in the annual reports of individual agencies (Ministry of Education, New Zealand Transport Agency and the Department of Corrections).
Note 17: Equity Accounted Investments

NZ GAAP determines the combination bases for entities that make up the Government reporting entity and is used by public benefit entities to determine whether they control another entity.

The Treasury’s view is that because the Government cannot determine the operating and financing policies of tertiary education institutions, but does have a number of powers in relation to these entities, it is appropriate to treat them as associates. City Rail Link and Kaingaroa Timberlands Partnership are joint operations or ventures that the Government jointly controls with its joint venture partners.

Tertiary Education Institutions (TEIs)

TEIs are Crown entities, and the Government has a number of legislative powers with respect to them in the interests of public accountability and has some significant reserve controls in the event of an institution facing financial risk. However, the Government does not determine the operating and financing policies of TEIs, if they are not at financial risk, but rather is committed to safeguarding their academic freedom and autonomy. By so doing, the Government obtains the benefits of an effective tertiary education sector. Their relationship to the Crown is managed by a plan agreed between them and the Tertiary Education Commission.

Summarised financial information in respect of TEIs is set out below:

### 2019 Forecast at Budget | Budget | 2018 | 2019

City Rail Link Limited

City Rail Link Limited (CRL) is a jointly controlled Crown entity company, co-funded by the Crown and Auckland Council, for the purpose of designing and constructing of the Auckland City Rail Link (an underground rail line between the city centre and the existing western line). Following a cost reforecast, and a scope change to futureproof for forecast patronage growth, the expected costs of the project are $4.4 billion, which will be confirmed once all the contracts are finalised. The Government's share of costs is $2.2 billion.

The Crown also recognises a 50% share of capital commitments held by CRL of $152 million (2018: $128 million).

New Zealand Local Government Funding Agency (NZLGFA) (included in Other)

The Government holds $5 million of the $25 million paid-up capital of NZLGFA.

For the year ended 30 June 2019, NZLGFA recognised revenue of $361 million (2018: $343 million) and a surplus of $11 million (2018: $12 million). NZLGFA's assets were $10,382 million (2018: $8,835 million) and liabilities were $10,308 million (2018: $8,771 million). The Crown’s share of the net assets is $15 million (2018: $13 million). The Crown is not a guarantor of the NZLGFA and has no share of any contingent liabilities of the NZLGFA.

</tbody>
</table>

Government entities have financial internal control procedures in place to ensure that accounts payable are settled accurately and on a timely basis. The carrying value is a reasonable approximation of the fair value for accounts payable, as they are typically short-term in nature.

Taxes repayable represent refunds due to the taxpayer as a result of assessments being filed. Refunds are issued to taxpayers once account and refund reviews are complete. The carrying value is a reasonable approximation of the fair value for taxes repayable.

1 The June 2018 actuals for accounts payable have been restated to include an amount previously categorised as a provision to align with the classification in June 2019.
Note 19: Borrowings

Government Bonds

Government bonds are measured at amortised cost.

The fair value of Government bonds measured at amortised cost is $66,454 million (2018: $67,289 million). This valuation is based on observable market prices.

New Zealand Government bonds are rated Aaa by Moody’s and AA+ by S&P and Fitch. The rating outlook is stable with Moody’s, S&P and Fitch.
Note 19: Borrowings (continued)

Kiwi Group Holdings customer deposits

Kiwi Group Holdings customer deposits are measured at amortised cost using the effective interest rate method. Amortisation and foreign exchange gains and losses are recognised in the Statement of Financial Performance as is any gain or loss when the liability is derecognised.

The fair value of Kiwi Group Holdings customer deposits measured at amortised cost is $18,255 million (2018: $16,172 million). For fixed term deposits by customers, fair values have been estimated using a discounted cash flow model with reference to market interest rates. For other deposits by customers, the carrying amount is a reasonable estimate of fair value.

Kiwi Group Holdings customer deposits exclude deposits held by other government reporting entities and will therefore differ from the total customer deposits reported by Kiwi Group Holdings.

Settlement deposits with Reserve Bank

Settlement deposits with the Reserve Bank represent the amount of money deposited with the Reserve Bank by commercial banks. They act as a liquidity mechanism used to settle wholesale obligations amongst the banks and provide the basis for settling most of the retail transactions that occur every working day between corporates and individuals.

Settlement deposits with the Reserve Bank are technically a form of borrowing by the Reserve Bank, where the liability is matched by a corresponding financial asset (reported as an element of marketable securities and deposits). Settlement deposits are reported at amortised cost, which is equivalent to the amount payable to depositors given the short term (ie, overnight) nature of these liabilities.

Settlement accounts are administered through the Exchange Settlement Account System (ESAS). ESAS account holders generally receive interest at the Official Cash Rate on their end-of-day balances. The Reserve Bank provides collateralised overnight borrowing facilities for banks, at an interest rate set at a margin over the Official Cash Rate.

Derivatives in loss

Derivative financial instruments are recognised both initially and subsequently at fair value. They are reported as either assets or liabilities depending on whether the derivative is in a net gain or net loss position respectively.

Treasury bills

Treasury bills are reported at amortised cost. As these are short-term sovereign-issued instruments, the carrying value is not materially affected by changes in Sovereign credit risk and the carrying value approximates the amount payable at maturity.

Other borrowings

<table>
<thead>
<tr>
<th>Actual</th>
<th>30 June 2019</th>

<td>5,160</td>
</tr>
<tr>
<td>Total other borrowings</td>
<td>19,575</td>
<td>18,815</td>
</tr>
</tbody>
</table>

Other borrowings held for trading or designated at fair value through the operating balance (to avoid an accounting mismatch) are measured at fair value. The movements in fair value are reported in the statement of financial performance, except for other borrowings designated as fair value where the changes in own credit risk are included in other comprehensive revenue and expenses.

All other borrowings are reported at amortised cost.

Other borrowings includes $3,066 million (2018: $3,090 million) of sovereign-guaranteed debt administered by the Reserve Bank and the Treasury.
Note 19: Borrowings (continued)

The fair value of other borrowings measured at amortised cost is $15,285 million (2018: $13,624 million). The fair value of financial liabilities with standard terms and conditions traded on active liquid markets was determined by reference to quoted market prices. Where such prices are not available, use is made of estimated discounted cash flow models with reference to market interest rates.

For those other borrowings measured at fair value, the value of these instruments will be affected by changes in interest rates due to credit risk and broader market influences.

<table>

</tr>
</tbody>
</table>

The table above identifies the difference between the carrying value and amount payable at maturity as well as the extent that fair value movements have resulted from changes in credit risk of the issuing entity. The carrying value can differ from the amount actually payable on maturity where the effect of discounting cash flows is material.

Of the other borrowings measured at fair value, $4,060 million (2018: $4,261 million) was designated as such to prevent an accounting mismatch because this debt and associated derivatives are managed as one integrated portfolio.

Note 20: Retirement Plan Liabilities

The Government operates a defined benefit superannuation plan for qualifying employees who are members of the Government Superannuation Fund (GSF). The members' entitlements are defined in the Government Superannuation Fund Act 1956. Contributing members make regular payments to GSF and in return, on retirement, receive a defined level of income. GSF has been closed to new members since 1 July 1992.

The GSF obligation has been calculated by GSF’s actuary as at 30 June 2019. A Projected Unit Credit Method, based on balance-date membership data, is used for the valuation. This method requires the benefits payable from the GSF in respect of past service to be estimated and then discounted back to the valuation date.
Note 20: Retirement Plan Liabilities (continued)

Amounts recognised in the statement of financial position in respect of GSF are as follows:

<table>

</tbody>
</table>

The Government expects to make a contribution of $711 million (2018: $727 million in the year ending 30 June 2019) to GSF in the year ending 30 June 2020. In addition to its obligations to past and present employees, because GSF is liable for income tax, the Crown will be required to make additional contributions equivalent to the tax on future investment income.
Note 20: Retirement Plan Liabilities (continued)

The principal assumptions used for the purposes of the GSF actuarial valuations are as follows:

Assumed inflation increases of 1.7% each year to year 18, then gradually increases, reaching 2.0% in year 52.

The defined benefit obligation increased in the year to 30 June 2019 by $2,134 million, mainly due to a decrease in the short and medium term discount rates over the last year.

The discount rate used to present value the pension cash flows associated with this obligation has a risk-free rate based on the market yield curve of New Zealand Government Bonds. Given the short-term nature of market data on Government Bonds in New Zealand, we also assume a single long-term equilibrium risk-free interest rate of 4.30% based on macroeconomic extrapolation. Discount rates are then smoothed over a minimum of 10 years from the end of the market yield curve to that long-term rate.

<td>1.7%</td>
<td>1.7%</td>
</tr>
</tbody>
</table>
Note 20: Retirement Plan (continued)

The major categories of GSF plan assets at 30 June are as follows:

<table>
<thead>
<tr>
<th></th>
<th>30 June 2019</th>
<th>30 June 2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equity instruments</td>
<td>3,053</td>
<td>3,023</td>
</tr>
<tr>
<td>Other debt instruments</td>
<td>419</td>
<td>599</td>
</tr>
<tr>
<td>Cash and short term investments</td>
<td>279</td>
<td>313</td>
</tr>
<tr>
<td>Property</td>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>Other</td>
<td>779</td>
<td>632</td>
</tr>
<tr>
<td><strong>Fair value of plan assets</strong></td>
<td><strong>4,531</strong></td>
<td><strong>4,570</strong></td>
</tr>
</tbody>
</table>

The expected rate of return on the plan assets of 5.0% (2018: 5.0%) has been calculated by taking the expected long-term returns from each asset class, reduced by tax (using the current rates of tax).

The actual return on plan assets for the year ended 30 June 2019 was 3.6%, or $161 million (2018: 11.1% or $466 million).

**Sensitivity Analysis**

The present value of the GSF obligation is sensitive to underlying assumptions such as the discount rate, inflation rates and expected salary increases. These assumptions are closely linked. For example, a change to the discount rate may have implications on the inflation rate used. Therefore, when calculating the present value of pension payments, it is unlikely that an assumption will change in isolation.

If the discount rate was to change in isolation, this would impact the measurement of GSF obligation as per the table below.

The plan’s assets are exposed to share price risks arising from its holding of equity instruments. Equity instruments are reported at fair value. Movements in share prices therefore directly translate into movements in the value of the share investment portfolio.

The sensitivity analysis below has been determined based on GSF’s exposure to share price risks at the reporting date.

Undiscounted defined benefit obligation

The reported GSF defined benefit obligation of $17,692 million (2018: $15,558 million) represents the net present value of estimated cash flows associated with this obligation. The following table represents the timing of future undiscounted cash flows for entitlements to 30 June 2019. These estimated cash flows include the effects of assumed future inflation.

Note 21: Provisions (continued)

Employee entitlements

The provision for employee entitlements represents annual leave, accrued long service leave, retiring leave and sick leave entitlements accrued by employees. Probability assumptions about continued future service affecting entitlements accrued as at reporting date have been made using previous employment data. For entitlements that vest over a period exceeding one year discount rates applied rise from 1.26% (2018: 1.78%) next year to 4.30% (2018: 4.75%) in later years.

This balance also includes a provision for compliance with the Holidays Act 2003. A number of entities have commenced or completed a review of calculations in recent years in order to ensure compliance with the legislation. Where possible, a provision has been made in these financial statements for obligations arising from those reviews or settlements that have been made in the current or previous years. These estimates and assumptions may differ to the actual results as further work is completed and could result in further adjustments to the carrying amount of the provision in the next financial year. While District Health Boards have recognised a Holidays Act 2003 provision, an indicative range for the final liability could be between $550 million and $650 million. To the extent that an obligation cannot reasonably be quantified at 30 June 2019, an unquantified contingent liability has been disclosed in note 25.

Emissions Trading Scheme

The Emissions Trading Scheme (ETS) was established to encourage a reduction in New Zealand's greenhouse gas emissions. The carbon price used to calculate the ETS provision at 30 June 2019 is NZ$23.15 (2018: NZ$21.10). The ETS provision represents the tradeable NZ units outstanding, that will be accepted by the Government as emitters honour the emissions obligations under the ETS. The carbon price used by the Ministry for the Environment is determined by the quoted NZU spot price at the end of the reporting date as published by OM Financial Limited on their website: https://commtrade.co.nz.

National Provident Fund guarantee

The Government has guaranteed superannuation schemes managed by the National Provident Fund (NPF). Included in the provision is the NPF's DBP Annuitants Scheme unfunded liability position of NZ$879 million (2018: NZ$835 million), represented by a gross estimated pension obligation of NZ$916 million (2018: NZ$871 million) with net investment assets valued at NZ$37 million (2018: NZ$36 million).

Aircraft lease return costs

Where a commitment exists to maintain aircraft held under operating lease arrangements, a provision is made during the lease term for the lease return obligations specified within those lease arrangements. The provision is based upon historical experience, manufacturers’ advice and, where appropriate, contractual obligations.

Firearms buy-back scheme

The Government announced a buy-back scheme for firearms, magazines and parts that were prohibited by the Arms (Prohibited Firearms, Magazines, and Parts) Amendment Act 2019. A provision of NZ$150 million has been recognised during the current fiscal year as an estimate of the Government’s obligation under this scheme (a possible range of between NZ$80 million and NZ$250 million). One of the uncertainties in determining the overall cost of the buy-back scheme is a limitation in data relating to firearms eligible under the scheme. Therefore, New Zealand Police have estimated the provision using key judgements and assumptions around the number of prohibited firearms that are likely to be surrendered and the conditions of these firearms. In forming a view on these critical assumptions, New Zealand Police have engaged with subject matter experts from the industry. Due to the buy-back scheme still being in its early stages and the data limitations to inform our estimate, there is a degree of uncertainty around what the ultimate cost for the Government will be under the scheme.

Other provisions

Other provisions are recognised where there is a present obligation as a result of a past event, where it is probable that this obligation will be settled and the liability can be reliably estimated. Other provisions include rehabilitation and restoration provisions.

Transactions with minority interests include items such as dividend payments and dividend reinvestments. Other minority interests consists of minority interests in New Zealand Superannuation Fund investments and the Kiwi Group Holdings capital notes issued.
Note 23: Capital Objectives and Fiscal Policy

The Government’s fiscal policy is pursued in accordance with the principles of responsible fiscal management set out in the Public Finance Act 1989:

- reducing total debt to prudent levels so as to provide a buffer against factors that may impact adversely on the level of total debt in the future by ensuring that, until those levels have been achieved, total operating expenses in each financial year are less than total operating revenues in the same financial year
- once prudent levels of total debt have been achieved, maintaining those levels by ensuring that, on average, over a reasonable period of time, total operating expenses do not exceed total operating revenues
- achieving and maintaining levels of total net worth that provide a buffer against factors that may impact adversely on total net worth in the future
- managing prudently the fiscal risks facing the Government
- when formulating revenue strategy, having regard to efficiency and fairness, including the predictability and stability of tax rates
- when formulating fiscal strategy, having regard to the interaction between fiscal policy and monetary policy
- when formulating fiscal strategy, having regard to its likely impact on present and future generations, and
- ensuring that the Crown’s resources are managed effectively and efficiently.

Further information on the Government’s fiscal strategy can be found in The Wellbeing Budget published with the Government’s budget.

The Government’s fiscal strategy is expressed through its long term objectives and short term intentions for fiscal policy.

**Long Term Fiscal Objectives - Fiscal Strategy Report 2019**

**Debt**

Maintain total debt at prudent levels.

The Government will reduce the level of net core Crown debt to 20 per cent of GDP within five years of taking office and maintain it at prudent levels thereafter. Prudent levels of net core Crown debt are within a range of 15 to 25 per cent of GDP (subject to any significant shocks to the economy).

**Operating balance**

The Government will deliver a sustainable operating surpluses (before gains and losses) across an economic cycle.

**Operating expenses**

The Government will maintain its expenditure to within the recent historical range of spending as a ratio of GDP.

The Government will take a prudent approach to ensure expenditure is phased, controlled and directed to maximise its benefits, in particular prioritising investments to address the long-term financial and sustainability challenges facing New Zealand.

**Operating revenues**

The Government will ensure a progressive taxation system that is fair, balanced and promotes the long-term sustainability and productivity of the economy.

**Net worth**

The Government will strengthen net worth consistent with the debt and operating balance objectives.

1 State highway project commitments have been calculated using a forecast of approved cash flows for each project, where that project is in the construction phase.

Committments are future expenses and liabilities to be incurred on contracts that have been entered into at balance date. Committments are classified as:

- **capital commitments**: aggregate amount of capital expenditure contracted for but not recognised as paid or provided for at balance date, and
- **lease commitments**: non-cancellable operating leases with a lease term exceeding one year.

Cancellation of commitments that have penalty or exit costs explicit in the agreement on exercising the option to cancel are reported at the value of those penalty or exit costs (ie, the minimum future payments).

Interest commitments on debts, commitments for funding, inventory and commitments relating to employment contracts are not separately reported as commitments.
Note 25: Contingent Liabilities and Contingent Assets

Contingent liabilities are:

- costs that the Crown will have to face if a particular event occurs, or
- present liabilities that are unable to be measured with sufficient reliability to be recorded in the financial statements (unquantifiable liabilities).

Typically, contingent liabilities consist of guarantees and indemnities, legal disputes and claims, and un-called capital. The contingent liabilities facing the Crown are a mixture of operating and balance sheet risks, and they can vary greatly in magnitude and likelihood of realisation.

In general, if a contingent liability was realised, or the amount becomes sufficiently reliable to record as a liability, it would reduce the operating balance and net worth and increase net core Crown debt. However, in the case of some contingencies (eg, un-called capital), the negative impact would be restricted to net core Crown debt.

Contingent assets are possible assets that have arisen from past events but the amount of the asset, or whether it will eventuate, will not be confirmed until a particular event occurs.

Contingent liabilities and contingent assets involving amounts of over $20 million are separately disclosed. Any quantifiable contingencies less than $20 million are included in the “other quantifiable” total. Some contingencies of the Crown are not able to be quantified; these unquantifiable contingent liabilities and contingent assets are disclosed as at 30 June 2019 where they are expected to be material but not remote. Where there is an obligation under New Zealand GAAP, amounts have been recognised in the financial statements.

### Contingent Liabilities

</tr>
</tbody>
</table>

By source:

- **Core Crown**: 9,175 9,297
- **Crown entities**: 392 17
- **State-owned Enterprises**: 191 203
- **Inter-segment eliminations**: (101) (117)

**Total quantifiable contingent liabilities**: 9,657 9,400

Contingent liabilities and contingent assets are reported at the point at which the contingency is evident or when a present liability is unable to be measured with sufficient reliability to be recorded in the financial statements (unquantifiable liability). Contingent liabilities, including unquantifiable liabilities, are disclosed if the possibility that they will crystallise is more than remote. Contingent assets are disclosed if it is probable that the benefits will be realised.
Note 25: Contingent Liabilities and Contingent Assets (continued)

a) Uncalled Capital

As part of the Crown’s commitment to a multilateral approach to ensure global financial and economic stability, New Zealand, as a member country of the organisations listed below, contributes capital by subscribing to shares in certain institutions. The capital (when called) is typically used to raise additional funding for loans to member countries, or in the case of the quota contributions to directly finance lending to members. For New Zealand and other donor countries, capital contributions comprise both “paid-in” capital and “callable capital or promissory notes”.

i) Asian Development Bank (ADB)

New Zealand was a founding-regional member of the ADB, whose aim is to accelerate economic development in developing countries in Asia and the South Pacific. New Zealand is a regional member but as a donor is not entitled to borrow from the Bank. Accordingly, New Zealand is in a similar position to a non-regional member, and contributes to the ADB’s resources only as required by ADB.

ii) IMF Promissory Notes

New Zealand’s subscription to the IMF is partly paid in cash and partly in promissory notes (being uncalled capital). The respective levels of called and uncalled capital change when calls are made by the IMF under the Financial Transactions plan to provide loan packages to borrowing countries. Even though promissory notes are technically “at call”, they are treated as contingent liabilities, as there are significant restrictions on the actual ability to call them, and there is no realistic estimate of either the amount or the timeframe of any call.

iii) International Bank for Reconstruction and Development (IBRD)

The IBRD is the main lending organisation of the World Bank Group. New Zealand, along with 188 other countries, is a member country and shareholder in the World Bank Group. The percentage of ownership is determined by the size of the economy and the amount of capital contributed to support the Bank’s borrowing activities among international capital markets. Accordingly, as New Zealand is a member, we contribute to the IBRD only as required by the IBRD.

iv) IMF arrangements to borrow

The Crown has agreed to make funds available to the IMF to support international financial systems in the event of a significant crisis. This is a contingent liability as it will depend upon uncertain trigger events occurring and the IMF calling the funds.

v) Asian Infrastructure Investment Bank (AIIB)

New Zealand was a founding-regional member of the AIIB. AIIB is a Chinese-initiated multilateral investment bank aimed at addressing the significant gap in infrastructure investment across Asia. The Crown has agreed to make funds available to the AIIB, the occurrence and amounts of which will depend upon uncertain trigger events and AIIB calling the funds.
Note 25: Contingent Liabilities and Contingent Assets (continued)

b) Guarantees and Indemnities

Guarantees are legally binding promises made by the Crown to assume responsibility for a debt, or performance of an obligation of another party, should that party default. Guarantees generally relate to the payment of money but may require the performance of services.

Indemnities are legally binding promises where the Crown undertakes to accept the risk of loss or damage that another party may suffer and to hold the other party harmless against loss caused by a specific stated event.

i) New Zealand Export Credit Office guarantees

The New Zealand Export Credit Office provides a range of guarantee products to assist New Zealand exporters manage risk and capitalise on trade opportunities around the globe. The obligations to third parties are guaranteed by the Crown and are intended to extend the capacity of facilities in the private sector.

ii) Air New Zealand letters of credit and performance bonds

The letters of credit are primarily given in relation to passenger charges and airport landing charges. Guarantees are also provided in respect of credit card obligations. The performance bonds are primarily given in respect of engineering contracts.

iii) Share of OECD employee benefits

The New Zealand Government is a member of the OECD and as a member has a proportional responsibility for the employee benefits obligations such as pension and healthcare recorded by the OECD. The OCED has increased its measurement of its obligation to €3.873 billion on the OECD Balance Sheet. $29 million represents New Zealand’s share of the unfunded portion of this balance. There is significant uncertainty as to when or if this responsibility will be triggered.
Note 25: Contingent Liabilities and Contingent Assets (continued)

c) Legal proceedings and disputes

The amounts under quantifiable contingent liabilities for legal proceedings and disputes are shown exclusive of any interest and costs that may be claimed if these cases were decided against the Crown. The amount shown is the maximum potential cost; it does not represent either an admission that the claim is valid or an estimation of the possible amount of any award against the Crown.

i) New Zealand Transport Agency – Contractual disputes

Legal proceedings and disputes represent the amounts claimed by plaintiffs relating to roading and other contract disputes. In February 2019, the Transport Agency received a claim for $352 million from the Wellington Gateway Partnership in relation to the Transmission Gully public–private partnership. The claim relates to the delays in the commencement of work. The amount above represents this claim and other contractual disputes.

ii) Legal tax proceedings

When a taxpayer disagrees with an assessment issued following the dispute process, the taxpayer may challenge that decision by filing proceedings with the Taxation Review Authority or the High Court. This contingent liability represents the maximum liability Inland Revenue has in respect of these cases.

iii) Kiwifruit vine disease Psa-V

A post-harvest operator, has filed a claim against the Ministry of Primary Industries alleging it is liable for damages they suffered from the kiwifruit vine disease, Psa-V. This plaintiff filed a notice of particulars of loss in September 2016, which quantifies its loss as $93 million. The Ministry defended the claim. On 27 June 2018 the High Court found that the Ministry did not owe a duty of care to Seeka. An appeal was heard in the Court of Appeal in the weeks 11 and 18 March 2019 and the Courts decision was reserved.

iv) Ministry of Health – Contractual disputes

The Fletcher Construction Company (Fletcher) filed a dispute against the Ministry for Grey Base hospital. Fletcher requested that mediation be conducted as the first phase of contract dispute resolution. Mediation was held 17 September 2019 between the Ministry and Fletcher, with both parties unable to come to resolution on disputed costs. The next likely stage for dispute resolution is arbitration. Fletcher is yet to file to commence this process.

v) Ministry of Education – Contractual disputes

Legal proceedings and disputes represent the amounts claimed by plaintiffs in relation to the performance of the Ministry of Education’s statutory role.

vi) Customs legal dispute

Customs assesses duty payable by taxpayers. Taxpayers may apply for refunds, drawbacks or remission of duty or may challenge the amount of duty assessed. Parties may challenge assessments or refusal of refund applications in the Customs Appeal Authority. Applications for refunds or duty claims challenged in the customs appeal authority are recorded as contingent liabilities. The liability is shown as the maximum liability the Crown faces.

### i) Unclaimed monies

Under the Unclaimed Money Act 1971, entities (eg, financial institutions, insurance companies) hand over money not claimed after six years to Inland Revenue. The funds are repaid to the entitled owner on proof of identification.

### ii) Air New Zealand partnership

The Air New Zealand Group has a partnership agreement with Pratt and Whitney in relation to the Christchurch Engine Centre (CEC), holding a 49% interest. By the nature of the agreement, joint and several liabilities exist between the two parties; the contingent liability represents Air New Zealand’s share of CEC’s liabilities.

### iii) Ministry for Primary Industries - Biosecurity Act compensation

Under section 162A of the Biosecurity Act 1993 compensation may be payable as a result of the exercise of powers to manage or eradicate organisms. Compensation is payable where there are verifiable losses as a result of the damage or destruction of a person’s property or restrictions on the movement of a person’s goods. The Ministry has been notified compensation will be sought for Bonamia Ostreae, Mycoplasma Bovis and post entry quarantine. These claims can be quantified but do not meet the tests for recognising a provision.
Note 25: Contingent Liabilities and Contingent Assets (continued)

Unquantifiable Contingent Liabilities

This part of the statement provides details of those contingent liabilities of the Crown which are not quantified, excluding those that are considered remote, reported by the following categories: *indemnities, legal disputes and other contingent liabilities*.

**Indemnities**

Indemnities are legally binding promises where the Crown undertakes to accept the risk of loss or damage that another party may suffer and to hold the other party harmless against loss caused by a specific stated event.

A number of these indemnities are provided to organisations within the Crown’s control. If these indemnities were to crystallise, the Crown would compensate the individual entity for the loss and there would likely be an adverse impact on core Crown expenses and core Crown net debt.

Note 25: Contingent Liabilities and Contingent Assets (continued)

Legal claims and proceedings

There are numerous legal actions that have been brought against the Crown. However, in the majority of these actions it is considered a remote possibility that the Crown would lose the case, or if the Crown were to lose it would be unlikely to have greater than a $20 million impact. Based on these factors, not all legal actions are individually disclosed. The claims that are disclosed individually, while they cannot be quantified, have the potential to exceed $20 million in costs.

\textit{i)} Accident Compensation Corporation (ACC) litigations

Litigation involving ACC arises almost exclusively from challenges to operational decisions made by ACC through the statutory review and appeal process. No accrual has been made for contingent liabilities which could arise, as these disputes are issue based and ACC’s active management of litigation means that it will be either settling or defending, depending on the merits of the issue in dispute. ACC’s Board believes the resolution of outstanding appeals will not have any material effect on the financial statements of ACC and therefore are not material for the Crown.

Cover is not available in the Treatment Injury Account for injuries arising as an ‘ordinary consequence’ of treatment. The term ‘ordinary consequence’ in legislation previously had no established legal or clinical meaning. In a case decided on 2 November 2018, the High Court found that ‘ordinary consequence’ means a consequence that has more than a 50% chance of occurring (ie, more likely than not). Therefore, any injury from treatment that has a 50% or less chance of occurring is not ‘ordinary’ and is covered. While ACC did not rely on any precise percentage in determining whether a consequence was ‘ordinary’, in broad terms if all relevant factors put the likelihood of injury at 10% or more, claims would commonly be declined on the grounds of ‘ordinary consequence’. ACC has appealed the High Court’s decision which is expected to be heard by the Court of Appeal in November 2019. ACC considers the High Court’s decision is inconsistent with Parliament’s intention when the treatment injury provisions were enacted.

\textit{ii)} Ministry for Primary Industries – Biosecurity Act compensation

Under section 162A of the Biosecurity Act 1993 compensation may be payable as a result of the exercise of powers to manage or eradicate organisms. Compensation is payable where there are verifiable losses as a result of the damage or destruction of a person’s property or restrictions on the movement of a person’s goods. The Ministry has been notified compensation will be sought for incursions including fruit fly, pea weevil, bonamia ostraea, myrtle rust, Mycoplasma bovis and the Post Entry Quarantine (PEQ) response. Due to the complexity and uncertainty of the amount of these claims the amounts are unquantified. To the extent that an obligation can be quantified, provision has been made in these accounts of $138 million as at 30 June 2019.

\textit{iii)} Kiwifruit vine disease Psa-V

Approximately 210 growers have filed a claim against the Ministry for Primary Industries alleging it is liable for damages they suffered from the kiwifruit vine disease, Psa-V. The plaintiffs have not quantified their losses, but have publicly claimed it is in the vicinity of $450 million, citing total industry losses of $885 million. The Ministry defended the claim. On 27 June 2018 the High Court found that the MPI owed a duty of care to Strathboss and claimants; an appeal was heard in the Court of Appeal in the weeks of 11 and 18 March 2019 and the Court’s decision was reserved.

The Ministry is still unable to quantify Strathboss’ claim because the extent of any loss will be dealt with at a second trial in the High Court. That trial will not occur, and the claim will not be quantified, unless all appeals are exhausted and the Crown remains liable.

\textit{iv)} Treaty of Waitangi claims

Under the Treaty of Waitangi Act 1975, any Māori may lodge certain claims relating to land or actions counter to the principles of the Treaty with the Waitangi Tribunal. Where the Tribunal finds a claim is well founded, it may recommend to the Crown that action be taken to compensate those affected. The Tribunal can make recommendations that are binding on the Crown with respect to land that has been transferred by the Crown to a SOE or tertiary institution, or is subject to the Crown Forest Assets Act 1989.

On occasion, Māori claimants pursue the resolution of particular claims against the Crown through higher courts. Failure to successfully defend such actions may result in a liability for historical Treaty grievances in excess of that currently anticipated.
Note 25: Contingent Liabilities and Contingent Assets (continued)

v) Canterbury insurance disputes

Southern Response Earthquake Services Limited (SRESL) from time to time receives notification of legal claims and disputes in relation to claim settlements as a commercial outcome of conducting its business.

A representative action proceeding was filed against SRESL on 29 May 2018. The financial statements make no allowance for the outcome of these proceedings, as the range of possible outcomes cannot be reliably quantified at this time. These claims are being defended because there are a wide range of potential outcomes, any estimate of a possible obligation resulting from this proceeding would be unreliable.

vi) Wakatu

Crown Law is acting for the Attorney-General on behalf of the Crown in right of New Zealand in Proprietors of Wakatu v Attorney-General (CIV-2010-485-181), in which it is claimed that the Crown breached trust, fiduciary and other equitable obligations relating to land transactions in the top of the South Island in the 1840s. The plaintiff seeks the return of land he says the Crown holds on trust for the successors of the original owners and compensation, or other relief, for alleged breach of trust, fiduciary and other equitable obligations. In February 2017, the Supreme Court held that the Crown owed a fiduciary duty in relation to the land transactions concerned, but remitted matters of breach, defences and remedy to the High Court for a further hearing or hearings. The matter is large and complex and could take up to a further 10 years to resolve.

Other unquantified contingent liabilities

i) Environmental liabilities

Under common law and various statutes, the Crown may have a responsibility to remedy adverse effects on the environment arising from Crown activities. Entities managing significant Crown properties have implemented systems to identify, monitor and assess potential contaminated sites.

In accordance with PBE IPSAS 19: Provisions, Contingent Liabilities and Contingent Assets any contaminated sites for which costs can be reliably measured have been included in the statement of financial position as provisions. Where costs cannot be reliably measured, they are disclosed as an unquantified contingent liability.

ii) Remediation of Per- and Poly-Fluoroalkyl Substances Contamination

Local and central government entities are investigating per- and poly-fluoroalkyl substances (PFAS) contamination from the historic use of specialised firefighting foam at sites on, and in the vicinity of, airports, New Zealand Defence Force bases, fuel storage facilities and other sites. Various government agencies have been undertaking a programme to review, investigate and develop a comprehensive approach to manage the impact of PFAS at sites around New Zealand. Once a response is agreed, it is possible the Crown may incur costs for the response to PFAS contamination, however these costs cannot be estimated without the agreed response being finalised, so an unquantified contingent liability has been disclosed.

iii) Treaty of Waitangi claims – settlement relativity payments

The Deeds of Settlement negotiated with Waikato-Tainui and Ngāi Tahu include a relativity mechanism. Now that the total redress amount for all historical Treaty settlements exceeds $1.0 billion in 1994 present-value terms, the mechanism provides that the Crown is liable to make payments to maintain the real value of Ngāi Tahu’s and Waikato-Tainui’s settlements as a proportion of all Treaty settlements. The agreed relativity proportions are 17% for Waikato-Tainui and approximately 16% for Ngāi Tahu. There is a risk that the timing and amount of the expense for the relativity payments may differ from that included in the fiscal forecasts. There is also uncertainty on how various disputes concerning the interpretation of the mechanism will be resolved.

iv) Holidays Act compliance

A number of entities have commenced or completed a review of calculations in recent year in order to ensure compliance with the Holidays Act 2003. Where possible, a provision has been made in these financial statements for obligations arising from those reviews that have been made in the current or previous years. To the extent that an obligation cannot reasonably be quantified at 30 June 2019, there is an unquantified contingency. Further work continues to be undertaken by entities to calculate the potential liability. For some entities, there are complexities and this issue is taking longer to resolve (eg, District Health Boards and Schools).
Note 25: Contingent Liabilities and Contingent Assets (continued)

v) Criminal Proceeds (Recovery) Act

The Ministry of Justice is responsible for administering the Criminal Proceeds (Recovery) Act 2009. The Act requires the Crown to give an undertaking as to damages or costs in relation to asset restraining orders. In the event that the Crown is found liable, payment may be required.

i) Tax disputes

A contingent asset is recognised when the Inland Revenue has advised a taxpayer of a proposed adjustment to their tax assessment. The taxpayer has the right to dispute this adjustment and a disputes resolution process can be entered into. The contingent asset is based on the likely cash collectable from the disputes process based on experience and similar prior cases, net of losses carried forward.

ii) New Zealand Defence Force Earthquake Insurance Recoveries (NZDF)

As at 30 June 2019, there are unquantifiable contingent assets in relation to claims with NZDF insurers for business interruption following the 2016 Kaikōura/Hurunui Earthquakes.

Unquantifiable Contingent Assets

NZDF Earthquake Insurance Recoveries

As at 30 June 2019, there are unquantified contingent assets relating to the claim with the Defence House landlord for damage to hard fixtures and fit-out for historic contributions to the landlord for build costs.
Note 26: Financial Instruments

The Government has devolved responsibility for the financial management of its financial portfolios to its sub-entities such as the Treasury, Reserve Bank, New Zealand Superannuation Fund, Inland Revenue, Kiwi Group Holdings Limited and ACC. The financial management objectives of each of these portfolios are influenced by the purpose and associated governance framework for which the portfolio is held. The purposes of a portfolio may cover:

- Funding purposes. Primarily financial assets and liabilities are held to finance the Government’s borrowing requirements and provide funds to Government entities. Examples include Government bonds and Treasury bills. Financing activity exposes the Government to financial risks from interest rates and global demand for New Zealand Government bonds.

- Social policy purposes. Primarily held to achieve social policy objectives. A large portion of the financial instruments for social policy purposes relates to student loans to support tertiary education policy. The associated risk for the Student Loan portfolio is that borrowers will default on their obligation.

- Investment purposes. Primarily held for the purpose of generating returns to assist in funding long-term obligations. The main investment portfolios are managed by ACC and the NZ Superannuation Fund. Associated risks include performance of the New Zealand and global markets.

- Central bank purposes. Primarily held for the Reserve Bank’s foreign reserve management and market operations. The main financial risks to which the Reserve Bank is exposed includes foreign exchange risks, liquidity risks and financial stability risks.

- Commercial purposes. Primarily held by entities that operate on a commercial basis, who will hold financial instruments arising from their normal business activity. The main examples are State owned enterprises (including the mixed ownership model companies). Associated risks include interest rates risks, foreign exchange risks and price risks.

These purposes are not mutually exclusive, with portfolios typically established for, or arising from, a public policy objective, such as pre-funding future superannuation expenses, but in doing so are managed to maximise economic returns consistent with the policy objective.

Reporting to Ministers on these portfolios is done on a portfolio-by-portfolio basis. Detailed risk management policy disclosure of Government reporting entities can be found in an individual entity’s Annual Report.

The institutional frameworks and policy objectives of these portfolios are reviewed periodically. Otherwise, reporting on the consolidated financial management and performance of these portfolios is done in the context of the interim and annual Financial Statements of the Government, the forecasts reported in the Half Year and Budget Economic and Fiscal Updates, and a more in-depth analysis of the Crown’s assets in regular Investment Statements.

This note provides the following details of the Crown’s financial instruments:

- Non-derivative financial instrument policies (pages 125 to 127)
- Classification of financial assets and financial liabilities (pages 128 to 129)
- Fair value measurement (page 130)
- Derivative disclosures (pages 131 to 132)
- Risk management (pages 132 to 136), and
- Sensitivity analysis (pages 136 to 137).
Note 26: Financial Instruments (continued)

Non-derivative financial assets

Financial assets are initially recognised at fair value and subsequently measured in accordance with the business model in which assets are managed and their contractual cash flow characteristics. Financial assets are measured at:

- amortised cost where the business model is to hold the financial assets in order to collect contractual cash flows and those cash flows represent solely payments of principal and interest
- fair value through other comprehensive revenue and expense ("FVCRE") where the business model is to both collect contractual cash flows and sell financial assets and the cash flows represent solely payments of principal and interest. Non-traded equity instruments can also be measured at fair value through other comprehensive revenue and expense, or
- fair value through operating balance ("FVTOB") if they are held for trading or if the cash flows of the asset do not solely represent payments of principal and interest. Financial assets may also be designated into this category if this accounting treatment results in more relevant information because it either significantly reduces an accounting mismatch with related liabilities or is part of a group of financial assets that is managed and evaluated on a fair value basis.

The maximum loss due to default on any financial asset is the carrying value reported in the statement of financial position.

<table>

</tr>
</tbody>
</table>

Financial assets measured at amortised cost are initially recognised at fair value plus transaction costs. They are subsequently measured at amortised cost using the effective interest method (refer interest revenue policy). If issued with durations of less than 12 months are recognised at their nominal value, unless the effect of discounting is material. Interest, impairment losses and foreign exchange gains and losses are recognised in the statement of financial performance.

Financial assets measured at fair value through other comprehensive revenue and expense (FVCRE) are initially recorded at fair value plus transaction costs. They are subsequently recorded at fair value with any resultant fair value gains or losses recognised in the statement of comprehensive revenue and expense, with some exceptions. Those exceptions are for impairment losses, any interest calculated using the effective interest method and, in the case of monetary items (such as debt securities), foreign exchange gains and losses resulting from translation differences due to changes in amortised cost of the asset. These latter items are recognised in the statement of financial performance. For non-monetary financial assets at FVCRE (eg, some equity instruments) the fair value movements recognised in the statement of comprehensive revenue and expense include any related foreign exchange component. Dividends related to these assets are recorded in the statement of financial performance. At de-recognition, the cumulative fair value gain or loss previously recognised in the statement of comprehensive revenue and expense, is recognised in tax payers funds for non-monetary financial assets and in the statement of financial performance for monetary financial assets.
An expected credit loss (ECL) model is used to recognise and calculate impairment losses for financial assets subsequently measured at amortised cost and debt instruments subsequently measured at FVCRE. Financial assets are to be assessed at each reporting date for any significant increase in the credit risk since initial recognition.

The simplified approach to providing for expected credit losses is applied to trade and other receivables and lease receivables. The simplified approach involves making a provision at an amount equal to lifetime expected credit losses. The allowance is assessed on a portfolio basis based on the number of days overdue, and taking into account the historical loss experience and incorporating any external and future information.

The general model prescribed is adopted for individual financial assets or groups of financial assets held at amortised cost or FVCRE, other than trade and other receivables and lease receivables. This model recognises impairment losses in line with the credit quality stage of the financial asset.

Impairment of financial assets that are individually significant are determined on an individual basis. Specific lifetime expected credit losses allowance is recognised for these assets under both the general and simplified impairment model.

Financial assets measured at fair value through the operating balance (FVTOB) are recorded at fair value with any realised and unrealised gains or losses recognised in the statement of financial performance. Gains or losses from interest, foreign exchange and other fair value movements are separately reported in the statement of financial performance. Transaction costs are expensed as they are incurred.

Financial assets classified at FVTOB are not assessed for impairment as their fair value reflects the credit quality of the instruments and changes in fair value are recognised in the statement of financial performance.

Cash and cash equivalents include cash on hand, cash in transit, bank accounts and deposits with an original maturity of no more than three months.

Fair values of quoted investments are based on market prices. Regular way purchases and sales of all financial assets are accounted for at trade date. If the market for a financial asset is not active, fair values for initial recognition and, where appropriate, subsequent measurement are established by using valuation techniques, as set out in the notes to the financial statements. At each balance date an assessment is made whether there is objective evidence that a financial asset or group of financial assets is impaired.
Note 26: Financial Instruments (continued)

Non-derivative financial liabilities

Financial liabilities are initially recognised at fair value and generally subsequently measured at amortised cost except of those measured at fair value through the operating balance.

Financial liabilities measured at fair value through the operating balance (FVTOB) comprise liabilities held-for-trading and financial liabilities irrevocably designated as FVTOB on initial recognition.

- A financial liability is classified as held-for-trading if it is incurred principally for the purpose of trading in the short term, or forms a part of a portfolio of financial instruments that are managed together and for which there is evidence of recent short-term profit-taking, or it is a derivative.

- Financial liabilities may be designated as FVTOB if this accounting treatment results in more relevant information because it either significantly reduces an accounting mismatch with a related asset or is part of a group of financial assets that is managed and evaluated on a fair value basis.

Financial liabilities held-for-trading and financial liabilities designated at FVTOB are recorded at fair value with any realised and unrealised gains or losses recognised in the statement of financial performance. Gains or losses from interest, foreign exchange and other fair value movements are separately reported in the statement of financial performance. For financial liabilities designated as measured at fair value, gains or losses relating to changes in the entity’s own credit risk are included in other comprehensive revenue and expense. Transaction costs are expensed as they are incurred.

Other financial liabilities are subsequently measured at amortised cost using the effective interest method. Financial liabilities entered into with durations of less than 12 months are recognised at their nominal value. Amortisation and, in the case of monetary items, foreign exchange gains and losses, are recognised in the statement of financial performance as is any gain or loss when the liability is derecognised.

Currency issued for circulation, including demonetised currency after 1 July 2004, is recognised at face value. Currency issued represents a liability in favour of the holder.
**Note 26: Financial Instruments (continued)**

### Classification of Financial Assets and Financial Liabilities

Financial instruments are measured at either fair value or amortised cost. Changes in the fair value of an instrument may be reported in the statement of financial performance or directly in other comprehensive revenue and expense depending on its measurement.

1 Available for sale and Held for trading categories were removed with PBE IFRS 9 implementation. Financial assets Held for Trading were reclassified to FVTOB. Fair value through the other comprehensive revenue and expenses category was introduced by PBE IFRS 9. Please refer to note 27 for more details.

As at 30 June 2019, the carrying value of financial assets that had been pledged as collateral was $1,601 million (2018: $2,418 million). These transactions are conducted under terms that are usual and normal to standard securities borrowing. The amount will fluctuate depending on the market values of derivatives held that are in a loss position at 30 June 2019 and that require collateral to be posted as per the terms. The increase in collateral pledged is largely as a result of securities pledged as collateral by the Reserve Bank and the New Zealand Superannuation Fund. For more information, refer to the individual entity’s annual report.

Fair Value Measurement

The following hierarchy details the basis for the valuation of financial assets and financial liabilities measured at fair value. This includes financial assets and financial liabilities measured at both fair value through the operating balance and fair value through other comprehensive revenue and expense. Fair value is the amount for which an asset could be exchanged or a liability settled, between knowledgeable, willing parties in an arm’s length transaction. Fair value may be determined using different methods depending on the type of asset or liability. Fair values are determined according to the following hierarchy:

- **Quoted Market Price** – Financial instruments with quoted prices for identical instruments in active markets (level 1).
- **Valuation Technique Using Observable Inputs** – Financial instruments with quoted prices for similar instruments in active markets or quoted prices for identical or similar instruments in inactive markets, and financial instruments valued using models where all significant inputs are observable (level 2).
- **Valuation Technique with Significant Non-observable Inputs** – Financial instruments valued using models where one or more significant inputs are not observable (level 3).

Note 26: Financial Instruments (continued)

Derivative

Derivative financial instruments are used across the portfolios to manage exposure to interest rate, foreign currency and electricity sector risk. These transactions do not generally involve any principal exchange at commencement, they are an agreement to change the characteristics of the underlying transactions. The credit exposure is therefore limited to the net market value movement resulting from changes in relevant interest rates, currencies or electricity price and volume.

### Derivatives

Derivative financial instruments are recognised both initially and subsequently at fair value. They are reported as either assets or liabilities depending on whether the derivative is in a net gain or net loss position respectively.

Recognition of the movements in the value of derivatives depends on whether the derivative is designated as a hedging instrument and, if so, the nature of the item being hedged (see Hedging section below).

Derivatives that are not designated for hedge accounting are classified as held-for-trading financial instruments with fair value gains or losses recognised in the statement of financial performance. Such derivatives may be entered into for risk management purposes, although not formally designated for hedge accounting, or for tactical trading.

Individual entities consolidated within the Government reporting entity apply hedge accounting after considering the costs and benefits of adopting hedge accounting, including:

1. whether an economic hedge exists and the effectiveness of that hedge
2. whether the hedge accounting qualifications could be met, and
3. the extent to which it would improve the relevance of reported results.

### Derivatives liquidity analysis

Derivative financial instruments are recognised both initially and subsequently at fair value. They are reported as either assets or liabilities depending on whether the derivative is in a net gain or net loss position respectively.
Note 26: Financial Instruments (continued)

Where a derivative qualifies as a hedge of variability in asset or liability cash flows (cash flow hedge), the effective portion of any gain or loss on the derivative is recognised in the statement of comprehensive revenue and expense and the ineffective portion is recognised in the statement of financial performance. Where the hedge of a forecast transaction subsequently results in the recognition of a non-financial asset or non-financial liability (eg, where the hedge relates to the purchase of an asset in a foreign currency), the amount recognised in the statement of comprehensive revenue and expense is included in the initial cost of the asset or liability. Otherwise, gains or losses recognised in the statement of comprehensive revenue and expense transfer to the statement of financial performance in the same period as when the hedged item affects the statement of financial performance (eg, when the forecast sale occurs). Effective portions of the hedge are recognised in the same area of the statement of financial performance as the hedged item.

When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in net worth at that time remains in net worth and is recognised when the forecast transaction is ultimately recognised in the statement of financial performance. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in the statement of comprehensive revenue and expense is transferred to the statement of financial performance.

Where a derivative qualifies as a hedge of the exposure to changes in fair value of an asset or liability (fair value hedge) any gain or loss on the derivative is recognised in the statement of financial performance together with any changes in the fair value of the hedged asset or liability. The carrying amount of the hedged item is adjusted by the fair value gain or loss on the hedged item in respect of the risk being hedged.

Derivatives liquidity analysis

The following table shows the undiscounted cash flows of derivatives based on the earliest date on which the Government reporting entities can be required to pay. Some derivatives are settled on a net basis and others on a gross basis.

Interest rate risk

The Government is exposed to interest rate risk as entities in the Government reporting entity borrow and invest funds at both fixed and floating interest rates. This risk is managed at the entity level in accordance with their capital objectives and risk management policies. These objectives and policies include maintaining an appropriate mix between fixed and floating rate borrowings.
**Note 26: Financial Instruments (continued)**

**Foreign currency risk**

The Government undertakes transactions denominated in foreign currencies, and therefore is exposed to exchange rate fluctuations. Exchange rate exposures are managed within approved policy parameters utilising derivatives such as forward exchange contracts and cross currency interest rate swaps. The carrying amounts of the Government’s foreign currency denominated financial assets and financial liabilities translated to NZD before and after the impact of derivatives are as follows:

Transactions in foreign currencies are initially translated at the foreign exchange rate at the date of the transaction. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the statement of financial performance, except when recognised in the statement of comprehensive revenue and expense when hedge accounting is applied.

Foreign exchange gains and losses arising from translating monetary items that form part of the net investment in a foreign operation are reported in a translation reserve in net worth and recognised in the statement of comprehensive revenue and expense.
Note 26: Financial Instruments (continued)

Credit risk

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the Government. The carrying value of financial assets equates to the maximum exposure to credit risk as at balance date. Credit risk is managed at the entity level in accordance with their capital objectives and risk management policies. These objectives and policies include limits to individual and industry counterparty exposure, collateral requirements, and counterparty credit ratings.

Of the financial assets held by the Government at 30 June 2019, the fair value of collateral held that could be sold or repurchased was $20,555 million (2018: $20,415 million). The majority of this relates to Kiwi Group Holdings, who can enforce their collateral in satisfying the debt in the event of the borrower failing to meet their contractual obligations.

Concentrations of credit exposure classified by credit rating, geography and industry of the counterparty are provided in the following tables.

Kiwi Group Holdings loans and advances consist mainly of residential lending. Therefore, these financial assets have been classified as non-rated and individuals for the purposes of credit risk.

Concentration of credit exposure by credit rating (using Standard & Poor’s ratings)

Note 26: Financial Instruments (continued)

At 30 June 2019, 15.4% (2018: 15.1%) of student loan borrowers were overseas. As the total advanced is widely dispersed over a large number of borrowers, the scheme does not have any material individual concentrations of credit risk.

Liquidity risk

Liquidity risk refers to the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities.

Liquidity risk is managed on an individual entity basis generally by maintaining adequate reserves, banking facilities and reserve borrowing facilities, by continuously monitoring forecast and actual cash flows.

The following table details the Government’s remaining contractual maturity for its financial liabilities. The table was compiled based on:

- the undiscounted cash flows of financial liabilities based on the earliest date on which the Government can be required to pay, and
- both interest and principal cash flows.

Financial Liabilities (excluding derivatives)

</tbody>
</table>
Note 26: Financial Instruments (continued)

The Government holds loan commitments of $4,225 million (2018: $3,213 million) which primarily all have contractual cash flows of less than five years.

In addition to the above financial liabilities, the Crown has entered into various financial guarantees and indemnities totalling $908 million (2018: $236 million) which expose the Crown to liquidity risk. These guarantees are classified as contingent liabilities and are set out in note 25. For all these guarantees, the earliest period which the Crown would be required to pay if the guarantees are called upon is less than one year.

The Government has access to financing facilities, of which the total unused amount at 30 June 2019 was $1,424 million (2018: $885 million). The Government expects to meet its obligations from operating cash flows, from the results of bond tenders, and proceeds of maturing financial assets.

In addition, the Crown purchases (or underwrites) KiwiBuild properties to help builders and property developers to build more affordable homes, in places where they are needed most. The underwrite creates a legal obligation to the Crown, in the event that the developer cannot sell the property after an agreed number of days after completion, the developer at their discretion can request the Crown to purchase the properties.

Sensitivity analysis

The sensitivity of the fair value of the Government’s financial assets and liabilities to changes in interest rates, New Zealand exchange rate and share prices are shown below. Any change would impact the operating balance and net worth of the Government. The 2018 sensitivity analysis for NZ interest rates has been restated due to a refinement of calculation by ACC.

</tbody>
</table>

Interest rate sensitivity

The effect on the operating balance is primarily from changes in interest revenue and interest expense on floating rate instruments and changes in the value of instruments measured at fair value through the operating balance. The Government does not have material exposure to foreign interest rates.

The sensitivity analysis has been determined based on the exposure to interest rates for both derivatives and non-derivative financial instruments at the balance sheet date. The effect of exposure to interest rates on the valuation of non-financial instruments, such as the ACC liability and GSF defined benefit plan, are provided in the relevant notes to the financial statements.

Movements in interest rates affect the financial results of the Government in the following manner:

- the resulting valuation changes for fixed interest instruments that are measured at fair value through the operating balance will affect the operating balance, while the valuation changes of fixed interest instruments designated as available-for-sale will affect equity reserves
- the resulting changes in interest expense and interest revenue on floating rate instruments will affect the operating balance, and
- where derivatives are designated as cash flow hedges of floating rate instruments, equity reserves will be affected by the resulting changes in the fair value of these derivatives.
Note 26: Financial Instruments (continued)

If interest rates had been 100 basis points higher/ (lower) at balance date and all other variables were held constant, the effect of financial instruments would increase/ (decrease) the Government’s financial results as outlined in the table above.

The Government’s sensitivity to interest rates has increased since last year. Interest rate sensitivity on financial instruments have a minor impact compared with other longer-dated obligations such as ACC outstanding claims liability and the GSF defined benefit obligations (refer note 11 and note 20 for sensitivity information for these long-term liabilities).

Foreign currency sensitivity

The sensitivity analysis does not include the impact on prices of goods and services purchased or sold in foreign currencies.

The Government’s sensitivity to foreign currency has increased during the current period. This change is largely in relation to financial instrument portfolios held by the Treasury, NZS Fund and ACC.

Equity market sensitivity

Share investments are reported at fair value. Movements in share prices therefore directly translate into movements in the value of the share investment portfolio.

The sensitivity analysis above has been determined based on the exposure of the NZS Fund and ACC to share price risks at the reporting date. These portfolios combined make up 99% of the Government’s total share investments (2018: 99%).

The Government’s sensitivity to share prices has increased from the prior year in line with an increase in the level of share investments held.

Note 27: Impact of Adoption of PBE IFRS 9: Financial Instruments

The Crown early adopted PBE IFRS 9 Financial Instruments with effect from 1 July 2018. This accounting standard replaces PBE IPSAS 29 Financial Instruments: Recognition and Measurement. This has ensured that the reporting of financial instruments changed simultaneously for the Government and all its sub-entities, whether public benefit entities or for profit entities under the New Zealand financial reporting framework, minimising differences between the two reporting frameworks. This note explains the nature and effect of the changes in accounting policies applied to these Financial Statements of Government due to the application of PBE IFRS 9.

The Crown adopted the transition arrangements option under PBE IFRS 9 in not restating financial instrument comparatives for classification, measurement and impairment.

In accordance with transition options under PBE IFRS 9 the Government has opted to continue to apply the hedge accounting requirements of PBE IPSAS 29. Therefore there have been no changes to the classification and measurement when accounting for hedges.

The following changes to accounting policies due to early adoption of PBE IFRS 9 have been applied to the Financial Statements of Government.

Classification and measurement of Financial Instruments under PBE IFRS 9

PBE IFRS 9 contains a classification and measurement approach for financial assets that reflects the business model in which assets are managed and their contractual cash flow characteristics. Financial assets are now measured at amortised cost only where the business model is to hold the financial assets in order to collect contractual cash flows and those cash flows represent solely payments of principal and interest.

Held to maturity and Available for sale financial assets categories were removed at the same time PBE IFRS 9 introduced the new measurement category “fair value through other comprehensive revenue and expense” (FVCRE). This measurement applies to financial assets where the business model is to both collect contractual cash flows and sell financial assets and the cash flows represent solely payments of principal and interest. Non-traded equity instruments can also be measured at fair value through other comprehensive revenue and expense.

Financial Assets at fair value through other operating balance under PBE IPSAS 29 had two sub categories: financial assets held for trading and those designated to the category at inception (generally to avoid an accounting mismatch). To line up the classification of financial assets with the PBE IFRS 9 the Crown decided to merge these two sub categories under a common measurement category being “Fair value through the operating balance” (FVTOB).
### Note 27: Impact of adoption of PBE IFRS 9: Financial Instruments (continued)

The following table summarises the classification and measurement changes by balance sheet asset category on 1 July 2018:

</table>
The main changes from adoption of PBE IFRS 9 are outlined below:

**Advances**

Student loans are deemed to be concessionary loans under PBE IFRS 9 as they are granted at below market terms (ie, interest free and repayments are income-contingent). As loan repayments are contingent on the income of borrowers, student loans do not meet the PBE IFRS 9 criteria for measurement at amortised cost and therefore, are now subsequently measured at FVTOB. Under PBE IPSAS 29 Student loans were deemed to be loans and receivables valued at amortised cost using the effective interest rate method, and adjusted for impairments.

Loans and taxpayers’ funds have increased by $628 million at 1 July 2018 for the reclassification from amortised cost to fair value (and if Budget 2018 numbers were restated this change would have increased student loans by $537 million). The increase relates to a change in the discount rate used to present value expected repayments. Under fair value, the entire loan book is be revalued using current market discount rates at each balance date. Previously, under amortised cost, market discount rates were applied for each year of lending and locked in for the duration of the loan.

**Marketable Securities**

Debt security instruments, previously measured at amortised cost, but now measured at fair value, increased in value by $33 million.

**Loans and Receivables**

Application of the expected credit loss model resulted in the earlier recognition of impairment losses and led to a decrease in trade and other receivables of $2 million on 1 July 2018.

**Reserves**

PBE IFRS 9 adoption has led to the creation of a “fair value through other comprehensive revenue and expenses reserve”. As a result, there were $66 million of movements from Taxpayers Funds to Other Reserves, mainly related to changes in the credit risk of financial instruments measured at FVCRE, which used to go through the operating balance.
Note 28: Related Parties

Related parties of the Government include key management personnel, and their close family members. Key management personnel are Ministers of the Crown, and their close family members are their spouses, children and dependants. Transactions between these related parties and a Government entity are disclosed in these financial statements only if they have taken place within a Minister's portfolio and they are not transactions entered into in the same capacity as an ordinary citizen.

Tertiary Education Institutions, joint ventures and the Government Superannuation Fund are also related parties of the Government due to the Government's influence over these entities. Transactions between these entities and Government entities are separately disclosed where material.

There are no other related parties as no other parties control the Government, and no other parties are controlled by the Government, other than those that are consolidated into the Financial Statements of the Government.

The Government comprises a large number of commonly controlled entities. Transactions between these entities are eliminated in these financial statements and therefore not separately disclosed.

Transactions where the financial results may have been affected by the existence of a related party relationship are disclosed in the financial statements.

Related party relationships are a normal feature of commerce. Therefore, the Government will transact with related parties as a matter of course.

Given the breadth of Government activities these related parties transact with the government sector in the same capacity as ordinary citizens. Such transactions include the payment of taxes and user charges (such as purchase of electricity), and the receipt of entitlements and services (such as access to education). These transactions have not been separately disclosed in this note.

Other transactions with these related parties can include the employment of Ministers’ spouses, children and dependants by a Government entity, including ministerial offices, departments, Crown entities and State-owned Enterprises, receipt of grants from, or the purchase or sale of goods and services to, a Government entity by Ministers, their spouses, children and dependants, or private-sector entities they own or jointly control. Such related party transactions will be disclosed if they have taken place within the Minister’s portfolio or if they involve lending or guaranteeing Ministers.

There were no related party transactions to be separately disclosed.

Note 29: Events Subsequent to Balance Date

Crown’s global settlement with the Christchurch City Council

On 23 September 2019, Cabinet approved the Global Settlement Agreement (GSA) with the Christchurch City Council (the Council). This agreement facilitates the sale and purchase and final ownership of certain assets (eg, the Bus Interchange) that are held by the Crown as at 30 June 2019.

As a result of the negotiations, the Crown will recognise a provision and expenses of just over $100 million for the expected loss on transfer of the assets covered by the GSA. The loss is not recognised in these financial statements because the commitment to transfer these assets only arises on the approval of the GSA, which occurred after balance date.

There will be on-going discussions with the Council on other aspects of the Greater Christchurch Regeneration programme that are not part of the GSA, which could potentially result in costs to the Government in the future.

Earthquake affected properties in Canterbury that were ‘over-cap’ and have subsequently been sold

On 15 August 2019 the New Zealand Government announced a Ministerial Directive that will allow owners of on-sold over-cap (cost of repairs exceeded $100,000 +GST) properties in Canterbury to apply for an ex-gratia Government payment to have their homes repaired and that this process will be facilitated by the Earthquake Commission. These customers have effectively purchased a property that requires additional remediation work, however, the Earthquake Commission has settled its liability and the homeowners are not able to access private insurance, ie, they have an uninsured gap between policy or Act entitlement, and the cost to repair their property. It is estimated that there are approximately 1,000 property owners in this position.

Other than those noted above, there have been no material events subsequent to balance date.
Statement of Unappropriated Expenditure
for the year ended 30 June 2019

Parliament’s approval for the incurring of expenses or capital expenditure is generally given either by means of an Appropriation Act or an Imprest Supply Act followed by an Appropriation Act.

Imprest Supply Acts authorise the Government to incur expenses and capital expenditure, in advance of the passing of an Appropriation Act, up to a specified amount. Cabinet rules require any use of imprest supply to be authorised by a specific Cabinet decision or in some instances by delegated authority to joint ministers. All expenses and capital expenditure incurred under an Imprest Supply Act must be subsequently approved by Parliament prior to the end of the financial year. If not approved by Parliament prior to the end of the financial year, then the expenditure must be validated in an Appropriation (Confirmation and Validation) Act.

Expenses or capital expenditure that is incurred without an appropriation or other authority (such as an Imprest Supply Act) or that is incurred under imprest supply but not included in an Appropriation (Supplementary Estimates) Act by the end of the financial year, is classed as “unappropriated expenditure” and remains so until it is subsequently validated by Parliament.

Unappropriated expenditure is subject to specific requirements in the Public Finance Act 1989:

- it must be disclosed in the annual financial statements of the Government, and of the relevant administering department, and
- it must be retrospectively validated by Parliament through the passing of an Appropriation (Confirmation and Validation) Act.

The following table describes the various types of unappropriated expenditure that can typically occur during the year. Categories (A) to (C) represent unappropriated expenses with authority, whilst categories (D) to (F) represent unappropriated expenditure without authority. All unappropriated expenditure is confirmed or validated via an Appropriation Bill in the following year.

<table>
<thead>
<tr>
<th>Category of unappropriated expenditure</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>National Disability Support Services</td>
<td>1,351,707</td>
<td>6,690</td>
</tr>
</tbody>
</table>

The Ministry of Health incurred expenses that were higher than appropriated, in the National Disability Support Services appropriation, mainly due to higher costs and growing demand.
### (D) Expenses and capital expenditure incurred in excess of appropriation and without prior Cabinet authority to use imprest supply

#### Ministry of Business, Innovation and Employment

<table>
<thead>
<tr>
<th>Vote Building and Housing</th>
<th>Non-Departmental Other Expenses</th>
<th>Housing Infrastructure Fund – Fair Value Write Down (MYA)</th>
<th>Authority at the time of breach</th>
<th>Amount without or exceeding appropriation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>$000</td>
<td>$000</td>
</tr>
</tbody>
</table>

Between 1 July and 30 September 2018, Ministry of Business, Innovation and Employment (MBIE) signed Housing Infrastructure Fund loan agreements to provide interest-free loan facilities of up to $539.400 million. The expense, in relation to the concession (interest free nature of the loans), was not recognised against the Housing Infrastructure Fund – Fair Value Write-Down appropriation until after the entire appropriation was transferred to the Ministry of Housing and Urban Development. Therefore, since no authority was retained by MBIE, the fair value write-down expense was incurred in excess of appropriation.

#### Ministry for the Environment

<table>
<thead>
<tr>
<th>Vote Environment</th>
<th>Non-Departmental Other Expenses</th>
<th>Waste Disposal Levy Disbursements to Territorial Local Authorities</th>

(D) Expenses and capital expenditure incurred in excess of appropriation and without prior Cabinet authority to use imprest supply

Due to a change in the technical accounting for the treatment of cost recoveries (primarily related to service housing and barracks) the New Zealand Defence Force (NZDF) has incurred costs that were higher than appropriations. In all previous financial years the NZDF had offset cost recoveries against the related expense. These cost recoveries are now treated as revenue, increasing the related expense to more than the total authority, resulting in unappropriated expenditure.

The NZDF has offset the cost recoveries against the related expense since the formation of the NZDF under the Defence Act 1990. Given the timespan, it is not possible to quantify the amount of unappropriated expenses prior to the 2014/15 financial year.
## Statement of Unappropriated Expenditure (continued)

</tbody>
</table>

(E) Expenses and capital expenditure incurred outside of scope of an appropriation and without prior Cabinet authority to use imprest supply

A small portion of payments from the Winter Energy Payment (WEP) appropriation were outside of its scope. These situations were: WEP being paid to clients who pay the maximum contribution to the cost of their residential care, and who receive a top up subsidy from a District Health Board; and where a client was overseas during the eligibility period, WEP was paid even when clients were overseas for longer than four weeks. The Social Securities Act 1964 has been amended by way of the Social Security (Winter Energy Payment) Amendment Act, to allow for payments in these situations, from 1 May 2019.

<tr>
<td></td>
<td>2014/15</td>
</tr>
</tbody>
</table>

The Ministry of Education operates insurance activities under the School Risk Management Scheme as per the Education Act 1989 section 78D. The expenses incurred as an insurer were outside of scope of the Primary Education and Secondary Education appropriations. These unappropriated expenses have been incurred since the scheme was started in 1991. Given the timespan, it is not possible to quantify the entire amount of unappropriated expenses prior to 2014/15. A new Non-Departmental Output Expense appropriation was established in April 2019.

(F) Expenses and capital expenditure incurred without appropriation and without prior Cabinet authority to use imprest supply

**Ministry of Health**

<table>
<thead>
<tr>
<th>Vote Health</th>
<th>Non-Departmental Other Expenses</th>
<th>Write off of Crown Investments</th>
<th>22,588</th>
</tr>
</thead>
</table>

The Ministry of Health had a number of health related capital investments reported as assets in prior years. In the current year an assessment of these investments found they needed to be written off. The total amount of these investments was $22,588,000. There was no appropriation authorising these write offs to occur resulting in unappropriated expenditure.
Statement of Expenses or Capital Expenditure Incurred in Emergencies

for the year ended 30 June 2019

Under section 25 of the Public Finance Act 1989, if a state of national emergency is declared under the Civil Defence Act 1983, Civil Defence Emergency Management Act 2002, or if the Government declares an emergency because of any situation that affects the public health or safety of New Zealand, the Minister of Finance may approve expenses or capital expenditure to meet such emergency or disaster whether or not an appropriation by Parliament is available for the purpose. Once expenses or capital expenditure have been incurred, the amounts that have not been appropriated must be disclosed in the annual financial statements of the Government for the financial year and sanctioned by Parliament in an Appropriation Act.

During the year there were no such emergency expenses or capital expenditure incurred.

Statement of Trust Money

for the year ended 30 June 2019

Trust money is defined by section 66 of the Public Finance Act 1989 as:

- Money that is deposited with the Crown pending the completion of a transaction or dispute and which may become repayable to the depositor or payable to the Crown or any other person.
- All money that is paid into Court for possible repayment to the payee or a third party, by virtue of any Act, rule or authority whatsoever.
- All money that is paid to the Crown in trust for any purpose.
- Money that belongs to or is due to any person and is collected by the Crown pursuant to any agreement between the Crown and that person.
- Unclaimed money that is due to or belongs to any person and is deposited with the Crown.

Trust money exists only where there is a trustee/beneficiary relationship. Money set aside by the Crown or department for a particular purpose will normally not be trust money as there is no directly identifiable beneficiary who has deposited the money with the Crown.

Trust money held by the Crown is managed separately from public money.

Under the Act, the Treasury has the responsibility to manage and invest trust money. The Treasury may appoint agents (including departments) to act on its behalf. Written Notices of Appointment to Manage and Invest Trust Money are issued in these cases. Section 68 of the Act establishes the constraints on the investment of trust money.

Additional Financial Information
Fiscal Indicator Analysis

for the year ended 30 June 2019

The purpose of the following fiscal indicator analysis is to provide a link between the financial statements (published on pages 42 to 140) and the fiscal indicators used to measure the Government’s performance against the fiscal objectives set out in the Fiscal Strategy Report.

The fiscal analysis comprises two statements: core Crown residual cash and debt.

Core Crown Residual Cash

The core Crown residual cash statement measures the core Crown cash surplus (or deficit), after operating and investing cash requirements are met, that is available for the Government to invest, repay, or, in the case of a deficit, fund in any given year.

Debt

The debt statement presents the calculation of both gross debt and core Crown net debt.

Gross debt is defined as gross-sovereign issued debt and represents debt issued by the sovereign (core Crown) and includes Government stock held by the NZS Fund, Accident Compensation Corporation, and the Earthquake Commission. Gross debt excludes Reserve Bank settlement cash and Reserve Bank bills as these are issued for liquidity management purposes.

Core Crown net debt represents gross debt less core Crown financial assets (excluding advances and financial assets held by the NZS Fund). Advances and financial assets held by the NZS Fund are excluded as these assets are less liquid and/or they are made for public policy reasons rather than for the purposes associated with government financing.

---

1 Core Crown borrowings in this instance includes unsettled purchases of securities (classified as accounts payable in the statement of financial position).

2 Gross Sovereign-Issued Debt (GSID) represents debt issued by the sovereign (the core Crown) and includes Government stock held by the New Zealand Superannuation Fund (NZS Fund), ACC and EQC.

3 Core Crown financial assets exclude receivables.

4 Net core Crown debt represents GSID less financial assets. This can provide information about the sustainability of the Government’s accounts, and is used by some international agencies when determining the creditworthiness of a country.

5 Adding back the NZS Fund assets provides the financial liabilities less financial assets of the core Crown, excluding those assets set aside to meet part of the future cost of New Zealand superannuation.

6 Net core Crown debt (excluding NZS Fund and advances) excludes financial assets which are held for public policy rather than treasury management purposes.

7 The Reserve Bank has used $1.6 billion of settlement cash to purchase reserves that were to have been funded by Government borrowing. Therefore, the impact of settlement cash on GSID is adjusted by this amount.
Information on State-owned Enterprises and Crown Entities

Accounting Policies

The Crown’s financial interest in State-owned Enterprises (SOEs) and Crown entities (CEs) is reported in accordance with the Crown’s accounting policies. Adjustments have been made to restate the financial position and financial performance of certain entities, as reported in their own financial statements, to a basis consistent with the Crown’s accounting policies.

With the exception of Tertiary Education Institutions (TEIs) the Crown has line-by-line combined all SOEs and CEs.

The Crown has equity accounted 100% of the net assets of TEIs on the basis that, in the event of disestablishment of a TEI (which is subject to a resolution of the House of Parliament), 100% of the net assets revert to the Crown in the absence of a decision to transfer the assets to a new or existing institution and, in the meantime, the Crown enjoys the benefits of the provision of a higher education to the public of New Zealand (refer note 17).

Mixed Ownership Companies

In addition to the core Crown’s direct investment in the mixed ownership companies (Air New Zealand, Genesis Energy, Meridian Energy and Mercury NZ) a number of Crown Financial Institutions (CFIs) have invested in the companies as part of their normal investment activities. These investments have the effect of reducing the overall minority interest.

<table>
<thead>
<tr>
<th>Company</th>
<th>% minority interest before CFI investment</th>
<th>% minority interest after CFI investment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air New Zealand</td>
<td>48.09%</td>

Glossary of Terms

Commercial sector
Consists of the assets and liabilities held by companies with commercial objectives, predominantly State-owned Enterprises.

Comparatives (Budget 2018 and Budget 2019)
Comparatives referred to as Budget 2018 were forecasts published in the 2018 Budget Economic and Fiscal Update while comparatives referred to as Budget 2018 were forecasts published in the 2019 Budget Economic and Fiscal Update.

Contingent assets
Revenue that the Crown will realise if a particular uncertain event occurs, or a present asset is unable to be measured with sufficient reliability to be recorded in the financial statements (unquantified contingent assets). Contingent assets typically comprise loans with specific events that trigger repayment and Inland Revenue pending assessments (where there is a proposed adjustment to a tax assessment).

Contingent liabilities
Costs that the Crown will have to face if a particular uncertain event occurs, or present liabilities that are unable to be measured with sufficient reliability to be recorded in the financial statements (unquantified contingent liabilities). Contingent liabilities typically comprise guarantees and indemnities, legal disputes and claims, and uncalled capital.

Core Crown
A reporting segment consisting of the Crown, departments, Offices of Parliament, the NZS Fund and the Reserve Bank of New Zealand. For a list of all entities included in this segment, refer to the Government Reporting Entity (pages 55 to 57).

Core Crown expenses
The day-to-day expenditure (eg, public servants’ salaries, welfare benefit payments, finance costs and maintaining national defence etc.) that does not build physical assets for the core Crown. This is an accrual measure of expenses and includes items such as depreciation on physical assets.

Core Crown revenue
Consists primarily of tax revenue collected by the Government but also includes investment revenue, sales of goods and services and other revenue of the core Crown.

Corporate tax
The sum of net company tax, non-resident withholding tax (NRWT) and foreign-source dividend withholding payments (FDWP).

Domestic bond programme
The amount and timing of government bonds expected to be issued or redeemed.

Excise duties
A tax levied on the domestic production of alcohol, tobacco and light petroleum products (CNG, LPG and petrol).

Expected Credit Loss (ECL)
Is the difference between all contractual cash flows that are due to the Crown and cash flows that the Crown expects to receive, discounted to its present value by using the effective interest rate.

Financial assets
Any asset that is cash, an equity instrument of another entity (shares), a contractual right to receive cash or shares (taxes receivable and ACC levies), or a right to exchange a financial asset or liability on favourable terms (derivatives in gain).

Financial liabilities
Any liability that is a contractual obligation to pay cash (government stock, accounts payable), or a right to exchange a financial asset or liability on unfavourable terms (derivatives in loss).

Financial sector
Consists of the assets and liabilities held by the Crown to finance or pre-fund government expenditure.

Fiscal drag
The additional personal income tax generated as an individual’s average tax rate increases as their income increases.

Forecast new capital spending
An amount provided in the forecasts to represent the impact on the financial position and cash flows of capital initiatives expected to be introduced over the forecast period.
**Forecast new operating spending**

An amount included in the forecasts to provide for the operating balance impact of policy initiatives, changes to demographics, and other forecasting changes expected to occur over the forecast period.

**Gains and losses**

Gains and losses typically arise from the revaluation of assets and liabilities, such as investments in financial assets and long-term liabilities for ACC and the Government Superannuation Fund. These valuation changes are reported directly as a movement in net worth (eg, asset revaluation reserves) or indirectly through the statement of financial performance.

**Gross domestic product (GDP)**

A measure of the value of all goods and services produced in New Zealand. Changes in GDP measure growth or contraction in economic activity or output. GDP can be measured as the actual dollar value of goods and services at today’s prices (nominal GDP), or excluding the effects of price changes over time (real GDP).

**Gross debt (or Gross sovereign-issued debt)**

Represents debt issued by sovereign (core Crown) and includes Government stock held by the NZS Fund, Accident Compensation Corporation, and the Earthquake Commission.

**Insurance liabilities**

The gross obligation for the future cost of claims incurred prior to balance date represented in today’s dollars (present value). The net liability is the gross liability less the asset reserves held to meet those claims.

**Inter-segment eliminations**

The amounts of transactions between different segments (core Crown, Crown entities and State-owned Enterprises) that are eliminated to determine total Crown results.

**Marketable securities**

Assets held with financial institutions. These assets are held for both cash flow and investment purposes. Examples are bonds, commercial papers and debentures.

**Net core Crown cash flow from operations**

The cash impact of operating results. It is represented by the operating balance (before gains and losses) less retained items (eg, net surplus of State-owned Enterprises, Crown entities and NZS Fund net revenue) less non-cash items (eg, depreciation).

**Net core Crown debt**

Net core Crown debt represents gross debt less core Crown financial assets (excluding advances and financial assets held by the NZS Fund). Advances and financial assets held by the NZS Fund are excluded as these assets are less liquid and/or they are made for public policy reasons rather than for the purposes associated with government financing.

**Net worth**

Total assets less total liabilities. The change in net worth in any given forecast year is largely driven by the operating balance and property, plant and equipment revaluations.

**Net worth attributable to the Crown**

Represents the Crowns share of total assets and liabilities and excludes minority interest’s share of those assets and liabilities.

**Operating balance**

Represents OBEGAL plus gains and losses. The operating balance includes gains and losses not reported directly as a movement against net worth. The impact of gains and losses on the operating balance can be subject to short-term market volatility and revaluations of long term liabilities.

**Operating balance before gains and losses (OBEGAL)**

Represents core Crown revenue less core Crown expenses plus surpluses from State-owned Enterprises and Crown entities. OBEGAL can provide a more useful measure of underlying stewardship than the operating balance as short term market fluctuations are not included in the calculation.

**Optimised Depreciated Replacement Cost**

Valuation method which represents the gross replacement cost of the asset, less allowances for physical deterioration (depreciated) and for obsolescence and relevant surplus capacity (optimised).

**Public Sector PBE Accounting Standards (PBE standards)**

The reporting and measurement framework under which these financial statements are prepared. These standards are approved by the External Reporting Board in New Zealand, based on requirements of the international public sector accounting standards issued by the International Public Sector Accounting Standards Board, adjusted where appropriate for the New Zealand context.
Residual cash
The level of money the Government has available to repay debt or, alternatively, needs to borrow in any given year. Residual cash is alternatively termed “Cash available/ (shortfall to be funded)”. Residual cash is equal to net core Crown cash flow from operations excluding NZS Fund activity less core Crown capital payments (eg, purchase of assets, loans to others).

Settlement cash
This is the amount of money deposited with the Reserve Bank by registered banks. It is a liquidity mechanism used to settle wholesale obligations between registered banks and provides the basis for settling most of the retail banking transactions that occur every working day between businesses and individuals.

Social sector
Consists of the assets and liabilities held primarily to provide public services or to protect assets for future generations.

Tax revenue
The accrual, rather than the cash (“tax receipts”) measure of taxation. It is a measure of tax due at a given point in time, regardless of whether or not it has actually been paid.

Top-down adjustment
An adjustment to expenditure forecasts to reflect the extent to which departments use appropriations (upper spending limits) when preparing their forecasts. As appropriations apply to the core Crown only, no adjustment is required to State-owned Enterprises or Crown entity forecasts.

Total borrowings
Represents the Government’s total debt obligations to external parties and can be split into sovereign-guaranteed debt and non-sovereign-guaranteed debt. Non-sovereign-guaranteed debt represents the debt obligations of State-owned Enterprises and Crown entities that are not explicitly guaranteed by the Crown.

Total Crown
Includes the core Crown (defined above) plus Crown entities and State-owned Enterprises. Also known as the Government Reporting Entities (which are listed on pages 55 to 57).
