Meeting: International Public Sector Accounting Standards Board
Meeting Location: Abu Dhabi, United Arab Emirates
Meeting Date: December 10–13, 2019

Agenda Item 7

TRANSFER EXPENSES (ED 72)

Project summary
The aim of the project is to develop a standard(s) that provides recognition and measurement requirements applicable to providers of non-exchange transactions, except for social benefits.

Themes (ED 72)

Question

1. To provide the Board with an overview of where issues from the in-period ED 72 review have been addressed. **Detail**

2. As part of the in-period review Staff received over 400 comments on the Comment Submission Templates for ED 70, ED 71 and ED 72.

3. To ensure all comments were considered, staff identified “themes” to help analyze the responses. For each theme, Staff has developed an issues paper setting out the comments received and a Staff recommendation to the IPSASB.

4. The following themes relate to ED 72:

Summary of Changes to Exposure Draft 72, *Transfer Expenses*, since November 6, 2019

**Question**

1. Does the IPSASB agree with the Staff’s proposed changes to [draft] IPSAS [X] (ED 72), *Transfer Expenses*?

**Detail**

2. IPSASB Staff made a number of changes to ED 72 as a result of the in-period review. These changes are reflected in a marked-up version of ED 72 in Agenda Item 7.3.1. In preparing this marked-up version of ED 72, staff have reviewed all comments provided by respondents, as well as the suggestions made by some respondents in marked-up versions of ED 72. Where the proposed changes were clear improvements, or corrected errors, these have been incorporated into Agenda Item 7.3.1. Some suggested changes will require further consideration before they could be incorporated into ED 72.

3. To facilitate the IPSASB’s review, the following paper summarizes and explains the substantive changes made to ED 72 since the November in-period review. The main body of the paper focuses on substantive changes made as a result of feedback from the review. Editorial and other minor changes made since the in-period review are listed in Appendix A of this paper.

**Substantive Changes Proposed as a Result of the November In-Period Review:**

4. Paragraphs 1, 3, 8, 99, 114, 115, AG25, AG92 and AG109 – Changes Relating to Scope: See Agenda Item 7.2.3.

5. Paragraphs 30, 43 and AG26 – Application of PSPOA. See Agenda Item 7.2.5.

6. Paragraph 6 – Definition of Transfer Expense. Clarify that the other entity to which the transfer provider transfers resources could be an individual.

7. Paragraph 10 – Recognition under the PSPOA. In response to comments received, paragraph 10 has been amended as follows:
   
   (a) Include a specific reference to goods or services being provided to third parties;
   
   (b) Clarify that where the criteria are not met, a transfer expense is accounted for as a transfer expense without performance obligations; and
   
   (c) Delete paragraph 10(d) as respondents did not consider an assessment of the probability that the transfer recipient would perform was necessary. As a consequence of this deletion, the related paragraphs 16 and 17 have also been deleted.

8. Paragraph 91 – Recognition of a Transfer Expense without Performance Obligations. Text amended to state where each party to the binding arrangement has the unilateral enforceable right to terminate a wholly unperformed binding arrangement, no transfer expense or liability is recognized. Text previously stated that the binding arrangement was treated as not existing.

9. Paragraph AG8 – Agent/Principal Arrangements. The text has been rewritten in response to a comment that “the reason provided for principal-agent arrangements to be outside the definition of

*Transfer Expenses*
“transfer expense” does not seem correct as it is stated as being because the transfer provider gains control of the transfer recipient’s output. However, principal-agent arrangements could be in the scope where an entity uses an agent to make transfer payments to a third-party beneficiary.”

10. **Paragraphs AG53 and AG54- Rebuttable Presumption that all Transaction Consideration relates to Performance Obligations.** The text has been rewritten in response to a comment that the operation of the presumption was unclear, and that restructuring the paragraphs would improve the understandability of the requirements.

11. **Paragraph AG96 – Return of Funds to Transfer Provider in Cases of Non-Compliance.** In response to a comment, the text has been expanded to also refer to unspent funds being returned.

12. **Amendments to IPSAS 33, First-Time Adoption of Accrual Basis IPSASs.** Paragraph 154H, the effective date paragraph, had been omitted. This paragraph is now included.

13. **Amendments to IPSAS 42, Social Benefits.** The table in the Implementation Guidance has been amended to replace references to exchange and non-exchange transactions with references to transactions with or without performance obligations.

**Decision Required**

14. Does the IPSASB agree with the Staff recommendations?
Appendix A – Editorial or Minor Changes Proposed as a Result of the In-Period Review

1. **SMC 4** – Clarify that the entity measuring transfer expenses is the transfer provider.

2. **Heading “Public Sector Performance Obligation Approach”** - Heading removed before paragraph 9 as not required.

3. **Paragraph 19** – Include an explicit reference to goods or services being transferred to a third-party beneficiary.

4. **Paragraphs 25, 26, 87, 95, 139, 140, AG23, AG35, AG40, IE17 and IE20** – Minor changes to improve clarity without changing the meaning of the text.

5. **Paragraphs 39, 89, 107, 148, AG2, AG4, Headings above AG7 and AG9, AG15, AG20, AG111, IE2, IE85, IE119, IE121 and IE145** – Correction of typographical errors.

6. **Paragraph 73** – The first sentence has been deleted as it merely repeated the definition of stand-alone purchase price.

7. **Amendments to Other IPSAS** – The heading “Amendments to IPSAS 1, Presentation of Financial Statements” was duplicated; this is now corrected. The footnote in the Implementation Guidance to IPSAS 1 has been relocated to remain with the amended text. Minor changes to the proposed wording for IPSAS 33, First-Time Adoption of Accrual Basis IPSASs have been made to retain the style of that IPSAS.

8. **Basis for Conclusions** – In response to comments received on Basis for Conclusions, minor changes to improve clarity were made to paragraphs BC2, BC4, BC5, BC7, BC8, BC12, BC14, BC28, BC33, BC34, BC35, BC37, BC44, BC50, BC53, BC54, and BC61.

9. **Illustrative Example 1** – The title has been amended to refer to the “other party” rather than the transfer recipient, as the definition of a transfer recipient is not met where the binding arrangement involves an exchange between two parties.
Scope

Question
1. Does the IPSASB agree with the proposed clarifications to the scope of Exposure Draft (ED) 72, Transfer Expenses?

Detail
2. Some respondents to the Revenue/Transfer Expenses in-period review questioned some aspects of the scope of ED 72, for the following reasons:

   (a) **Definition of transfer expenses.** A respondent commented that this definition does not seem to differentiate between the reporting entity incurring an expense when it provides a good, service, or other asset to another entity without receiving any good, service, or other asset in return; and the reporting entity transferring a resource (a good, service, or other asset) to another entity (without receiving any good, service, or other asset in return) for the other entity to provide services for other third party beneficiaries. Staff consider both types of transaction are captured by the definition of transfer expenses, with the appropriate accounting treatment being specified elsewhere in the ED; no further action.

   (b) **Transactions partly within scope of ED 72 and partly without.** One respondent questioned whether such transactions would occur. Illustrative Example 3 covers this; no further action.

   (c) **Link with ED 70, Revenue with Performance Obligations.** One respondent commented that only those performance obligations (as defined by ED 70) that involve a transfer to third party beneficiaries are within the scope of ED 72. Paragraph 8 has been updated to reflect this and provide a better link with ED 70.

   (d) **Taxes.** Some respondents did not consider the text was sufficiently clear that ED 72 does not apply to income taxes and payroll taxes. Paragraphs 99 and AG109 have been amended to clarify the scope in relation to taxes.

   (e) **Transactions within the scope of IPSAS 41, Financial Instruments.** Respondents considered that concessionary loans should be explicitly excluded from the scope of ED 72. Paragraph 3 has been amended accordingly. Respondents also considered that the subsequent measurement of financial liabilities were within the scope of IPSAS 41. Paragraph 114 has been added and paragraph 115 amended to clarify that financial liabilities are within the scope of IPSAS 41, and that the provisions in ED 72 apply to non-financial liabilities.

   (f) **Statutory payables.** Some respondents did not consider that requirements in respect of statutory payables should be included in the scope of ED 72. The IPSASB has previously agreed to include such provisions; no further action.

   (g) **Performance obligations linked to third parties.** A respondent commented that it may not be clear why transfer expenses with performance obligations only apply in instances where the recipient has an obligation to transfer goods or services to third-party beneficiaries. Paragraph AG25 has been added to provide guidance on this matter.
(h) **Capital grants.** A respondent commented that ED 72 does not explicitly address capital grants. **Paragraph 1** (objective) has been amended to refer to capital grants.

(i) **Overall scoping guidance.** One respondent commented that it is unclear which Standard entities should apply first, i.e. IPSAS 42, IPSAS 19 or this Standard. Paragraph 3 lists items outside the scope of ED 72, including IPSAS 42, collective and individual services, etc. It is clear any items listed in paragraph 3 are covered by those Standards, not this ED; no further action.

(j) **Scope of transfer expenses without performance obligations.** One respondent commented that this approach should apply to all transactions outside the scope of the PSPOA, not just where a binding arrangement requires enforceable activities and/or eligible expenditure rather than performance obligations. Staff considers that this is already addressed by paragraph 87; no further action. One respondent commented that the reference to goods being returned to the transfer provider in paragraph AG92 could be misleading, as the scope of transfer expenses excludes cases where the transfer provider receives goods, services or other assets in return for the consideration provided. **Paragraph AG92** has been amended to remove this reference.

**Decision Required**

3. Does the IPSASB agree with the Staff recommendations?
Structure

Question
1. Does the IPSASB agree with the staff recommendation not to amend the structure of Exposure Draft (ED) 72, Transfer Expenses?

Detail
2. One respondent to the Revenue/Transfer Expenses in-period review considered that ED 72 should address transfer expenses without performance obligations before transfer expenses with performance obligations. The reasons given for this preference were:
   (a) The requirements are shorter (approximately 30 paragraphs against 80 paragraphs); and
   (b) Given all the PSPOA requirements, transfer expenses without performance obligations are likely to be more prevalent.

3. This respondent also expressed concern about the overall size of the document.

4. Staff do not propose any changes to the structure of ED 72. The IPSASB has previously agreed that the ED should address transfer expenses with performance obligations before transfer expenses without performance obligations. This mirrors the IPSASB’s decision that ED 70, Revenue with Performance Obligations, should be before ED 71, Revenue without Performance Obligations, in the IPSASB’s literature. This ordering also reflects the need for preparers to understand what performance obligations are before deciding whether a transaction includes a performance obligation.

5. This respondent also suggested relocating paragraph AG2, which addresses how an entity meets the objective of the ED, into the core text of the ED. Staff notes that it was an explicit decision of the IPSASB to locate this paragraph in the Application Guidance, and therefore no change is proposed.

6. Another respondent commented that the ED repeats text between “transfers with performance obligations” and “transfers without performance obligations”, specifically recognition and measurement. The respondent suggested that the IPSASB consider removing duplications with cross-references.

7. Staff consider that, while including the text under both approaches does increase the length of the ED, it simplifies the application of the ED for those preparers who are only seeking to apply one approach. Consequently, staff propose no changes are made.

8. Another respondent commented that the guidance on debt relief (now in paragraphs 92, 93 and 113) corresponded to Application Guidance paragraphs in ED 71. This respondent proposed that these paragraphs should be relocated to the Application Guidance in ED 72.

9. Staff consider that ED 72 follows the format of the latest IPSASB standards, and requirements for each type of transaction are included in the core text. ED 71 is based the format of earlier IPSAS; other respondents have suggested that the format of ED 71 should be amended to more closely follow the format used in ED 70, and ED 72.

10. Staff therefore propose retaining the paragraphs in their current locations.
Decision Required

11. Does the IPSASB agree with the Staff recommendations?
PSPOA Assessment

Question

1. Does the IPSASB agree with the proposed clarifications in respect of the assessments preparers will need to make under the Public Sector Performance Obligation Approach (PSPOA)?

Detail

2. Some respondents to the Revenue/Transfer Expenses in-period review raised concerns about the assessments that preparers will need to make under the PSPOA.

Assessment of When a Third-Party Beneficiary Gains Control.

3. Respondents expressed concerns that it might be difficult for the transfer provider to be able to assess whether a third-party beneficiary has gained control over the goods or services transferred by the transfer recipient. Respondents noted that ED 72 permits an entity to make this assessment by reference to the point at which the transfer recipient loses control of the goods or services that it transfers to the third-party beneficiary, but did not consider this would necessarily be any easier. Respondents also commented that there is no guidance on assessing whether the transfer recipient has lost control.

4. Staff accepts that making this assessment may be difficult, and will require the transfer provider to have sufficient information about the transfer of goods or services from the transfer recipient to the third-party beneficiary.

5. However, the PSPOA relies on the transfer provider being able to make these assessments. Staff consider that, if the transfer provider cannot make these assessments, it is unlikely that the transfer provider could enforce the binding arrangement. If the binding arrangement cannot be enforced, staff consider that that arrangement should be accounted for as a transfer expense without performance obligations. Consequently, staff consider that no changes should be made to the assessments required under the PSPOA.

6. One respondent commented that the requirement to determine whether a transfer provider had more reliable information before being able to make the assessment based on the transfer recipient's loss of control. This requirement has been deleted in paragraph 30.

Measuring Progress Towards Complete Satisfaction of a Performance Obligation

7. Respondents also considered that it might be difficult to measure a transfer recipient's progress towards complete satisfaction of a performance obligation. For the reasons set out above, staff acknowledges that this might be difficult, but does not propose changing the requirements.

8. One respondent commented that it is unclear what an entity should do if they do not expect to be able to measure progress presently or subsequently. Staff notes that ED 72 states that if a performance obligation is not satisfied over time, it is satisfied at a point in time. Consequently, staff consider that if an entity cannot measure progress over time, it should recognize an expense at a point in time. Paragraph 43 has been amended to make this explicit.
Use of Input Methods

9. A respondent noted that no guidance was included on input methods, and proposed that either they were removed from ED 72, or guidance included.

10. At its September 2019 meeting, the IPSASB agreed to remove guidance that it considered would rarely be relevant to a prepare under ED 72, but to allow a preparer to rely on the equivalent guidance in ED 70, Revenue with Performance Obligations.

11. Staff are not proposing any changes to this approach, but acknowledge that the example included in ED 72 was unhelpful. Consequently, Paragraph AG26 has been amended to refer to input methods, and explain where these might be used.

Use of Assumptions

12. Respondents questioned whether the use of assumptions would assist preparers in applying the PSPOA under ED 72. They noted that paragraph 47 includes and assumption:

For the purpose of determining the transaction consideration, an entity (a transfer provider) shall assume that the goods or services will be transferred by the transfer recipient to the third-party beneficiary as promised in accordance with the existing binding arrangement and that the binding arrangement will not be cancelled, renewed or modified.

13. Staff note that this assumption relates to uncertainties about future events; the assessments required relate to the occurrence (or non-occurrence) of an event (the transfer of goods or services) in the past. Consequently, staff do not consider it appropriate to permit the use of additional assumptions, as this could result in the recognition of expenses that do not accurately reflect past events.

Transfer Provider’s Loss of Control

14. One respondent commented that the loss of control approach used when accounting for transfer expenses without performance obligations was preferred.

15. Staff do not consider that this approach is applicable to the PSPOA. When accounting for transfer expenses without performance obligations, an entity recognizes an expense when it loses control of the resources it transfers to the transfer recipient. Under the PSPOA, this may be at a different time to the point the transfer recipient transfers goods or services to the third-party beneficiary.

16. A transfer provider may have recognized an asset for goods or services to be transferred to third-party beneficiaries; however, a transfer provided only loses control of this asset as the goods or services are transferred to the third-party beneficiary by the transfer recipient. Assessing the loss of control of this asset is no different to assessing when the third-party beneficiary gains control of the goods or services or the transfer recipient loses control of the goods or services.

17. In addition, the transfer of goods or services may occur prior to the transfer provider having transferred resources, and before it had recognized a right to have goods or services transferred to third-party beneficiaries.

18. Consequently, staff do not recommend changing the basis for recognition under the PSPOA.
Disclosures

20. Respondents who considered that the assessments under the PSPOA would be difficult for preparers also considered the disclosure requirements onerous, and proposed less disclosures.

21. One respondent, however, proposed reinstating the disclosures in respect of the disaggregation of expenses and the movement in binding arrangement balances that the IPSASB agreed to remove at its September 2019 meeting.

22. Disclosure are discussed in Agenda Item 5, and are not considered further in this paper.

Decision Required

23. Does the IPSASB agree with the Staff recommendations?
Other Issues

Question

1. Does the IPSASB agree with the staff recommendations regarding these other issues raised by respondents?

Detail

2. In addition to the issues identified elsewhere in Agenda Item 7, respondents made additional comments. The comments received, and the staff recommendations, are as follows:

(a) **Contributions from owners.** A respondent proposed deleting the text that refers to contributions from owners, stating that only distributions to owners need be addressed in ED 72, *Transfer Expenses.* Staff note that the entity may be a controlling entity or an investor and may make contributions. As this issue has been raised more than once at IPSASB meetings, suggesting a potential for confusion, staff consider that it is best addressed by an explicit reference. **No action proposed.**

(b) **Use of terms “price” and “consideration”.** A respondent commented that in paragraphs 17 and 18, the terms “price” and “consideration” seem to be used interchangeably. Consideration should be the overall contract consideration, and price the specific goods or services. Staff note that the text mirrors that in ED 70, *Revenue with Performance Obligations.* In both cases, price and consideration are not defined terms and are used in the general sense. Both are needed in these paragraphs to distinguish between the agreed price and the amount paid. **No action proposed.**

(c) **Expenses treatment should mirror revenue treatment.** A respondent commented that ED 72 should adopt the principle that that payments with present obligations are accounted for consistently with inflows with present obligations i.e. outflows are to be expensed when the recipient of the outflow has met their present obligation. Staff note that the IPSASB has agreed that, for transfer expenses without performance obligations, the transfer provider has no asset in respect to the transfer recipient’s present obligation. Consequently, the transfer provider recognizes an expense when the lose control of the resources to be transferred (or have a present obligation to transfer those resources). The accounting treatment for the transfer expense in such cases will not be symmetrical with the corresponding revenue treatment. **No action proposed.**

(d) **Prepayments.** A respondent suggested including text from ED 71, *Revenue without Performance Obligations,* in ED 72 in respect of prepayments. Staff consider that paragraphs AG94 and AG95 explain why a payment in advance of an obligation to make the payment would usually be recognized as an expense. Staff note that the treatment may not be symmetrical with ED 71. **No action proposed.**

(e) **Appropriations.** Some respondents questioned whether the text relating to appropriations could be improved. Staff note that the text is consistent with the text in ED 71, where no changes are proposed. **No action proposed.**
(f) **Editorial Changes.** Some respondents suggested further editorial changes that staff considers are not necessary. Respondents proposed changes to paragraphs 103, 119, AG111, IE89, IE121 and IE205. **No action proposed.**

(g) **Terminology.** Respondents considered that the frequent references in the ED to “the entity (the transfer provider)” could be simplified, and suggested alternatives. **Staff propose that the ED should explain that it applies to the transfer provider, and then refer to the transfer provider throughout.** This would be consistent with IPSAS 32, *Service Concession Arrangements: Grantor*, which refers to the grantor; and with IPSAS 33, *First-Time Adoption of Accrual Basis IPSASs*, which refers to the first-time adopter.

Respondents also proposed that the ED be reviewed to ensure consistent use of terminology regarding goods, services and other assets. **Staff concurs, and proposes that this review is carried out as part of the finalization process.**

(h) **Definitions.** A respondent considered that the definitions of transfer provider, transfer recipient and eligible expenditure should be replicated in ED 72; currently these terms are only referred to by means of a cross-reference. The respondent noted that this approach had been used in IPSAS 34-38. Staff notes that the IPSASB has explicitly decided to use cross-references rather than repeating the definitions. **No action proposed.**

(i) **Amendments to Other IPSAS.** A respondent questioned whether a consequential amendment to IPSAS 24, *Presentation of Budget Information in Financial Statements*, is required. The example in IPSAS 24 includes a reference to “grants and other transfers.” Staff note this terminology would be consistent with GFS terminology, which may form the basis for budget, and that an amendment may not be necessary. **No action proposed, but the IPSASB’s views are sought.**

(j) **Specific Matters for Comment.** Respondents suggested that the proposed SMCs needed to be broken down into more detail. **Staff propose to review the SMCs once the IPSASB has approved the ED.**

(k) **Illustrative Examples.** A respondent suggested that examples illustrating the operation of agency scenarios are required. To date, no examples have been received. **No action proposed unless examples are received.**

**Decision Required**

3. Does the IPSASB agree with the Staff recommendations?
Approval of [draft] IPSAS [X] (ED 72), *Transfer Expenses*

**Purpose**

1. The IPSASB is asked to approve [draft] IPSAS [X] (ED 72), *Transfer Expenses*, and to agree with the proposed exposure period.

**Due Process**

3. The IPSASB CAG discussed the significant issues raised to the Consultation Paper (CP) at its June 2018 and June 2019 meetings. The CAG provided input for the IPSASB to consider as part of its project development.

4. The IPSASB performed an initial review of responses in March 2018 and provided Staff with direction in how to proceed. From June 2018 through September 2019 the IPSASB considered responses to the CP and developed three exposure drafts:
   
   (a) ED 70, *Revenue with Performance Obligations*;
   (b) ED 71, *Revenue without Performance Obligations*; and
   (c) ED 72, *Transfer Expenses*.

5. The IPSASB performed an in-period review from November 6 to November 18, 2019, as a way to progress identified issues that needed to be addressed prior to the approval of the ED in December 2019.

**Exposure Period**

6. Staff proposes releasing the document before the end of February 2020. Staff recommends setting an August 31, 2020 deadline for comments to allow for a 6-month exposure period.

**Decision required**

7. The IPSASB is asked to:
   
   (a) Approve [draft] IPSAS [X] (ED 71), *Transfer Expenses*, for comment; and
   (b) Confirm an exposure period ending August 31, 2020.
IPSASB members, Technical Advisors, and Observers are asked to note the following when reviewing ED 72:

(a) Authoritative Text (Core Text, Application Guidance and Amendments to Other IPSAS):
   (i) The IPSASB provisionally approved the authoritative text up to September of 2019.
       a. Reviewed original text has been shaded Orange; and
       b. Changes made to the in-period review version of ED 72 are shown tracked.
   (ii) Paragraphs which do not have any shading are new since the September 2019 meeting.
       a. Reviewers are asked to review these paragraphs in detail for technical accuracy and consistency with the IPSASB’s decisions from previous meetings; and
       b. Changes made to in-period review version of ED72 are tracked.

(a)
Proposed International Public Sector Accounting Standard®

Transfer Expenses
This document was developed and approved by the International Public Sector Accounting Standards Board® (IPSASB®).

The objective of the IPSASB is to serve the public interest by setting high-quality public sector accounting standards and by facilitating the adoption and implementation of these, thereby enhancing the quality and consistency of practice throughout the world and strengthening the transparency and accountability of public sector finances.

In meeting this objective the IPSASB sets IPSAS® and Recommended Practice Guidelines (RPGs) for use by public sector entities, including national, regional, and local governments, and related governmental agencies.

IPSAS relate to the general purpose financial statements (financial statements) and are authoritative. RPGs are pronouncements that provide guidance on good practice in preparing general purpose financial reports (GPFRs) that are not financial statements. Unlike IPSAS RPGs do not establish requirements. Currently all pronouncements relating to GPFRs that are not financial statements are RPGs. RPGs do not provide guidance on the level of assurance (if any) to which information should be subjected.

The structures and processes that support the operations of the IPSASB are facilitated by the International Federation of Accountants® (IFAC®).

REQUEST FOR COMMENTS

This Exposure Draft, *Transfer Expenses*, was developed and approved by the International Public Sector Accounting Standards Board® (IPSASB®).

The proposals in this Exposure Draft may be modified in light of comments received before being issued in final form. **Comments are requested by [Date].**

Respondents are asked to submit their comments electronically through the IPSASB website, using the "Submit a Comment" link. Please submit comments in both a PDF and Word file. Also, please note that first-time users of the website must register to use this feature. All comments will be considered a matter of public record and will ultimately be posted on the website. This publication may be downloaded from the IPSASB website: www.ipsasb.org. The approved text is published in the English language.

**Objective of the Exposure Draft**

The objective of this Exposure Draft is to propose improvements to the relevance, faithful representativeness and comparability of the information that a reporting entity provides in its financial statements about transfer expenses.

**Guide for Respondents**

The IPSASB would welcome comments on all of the matters discussed in this Exposure Draft. Comments are most helpful if they indicate the specific paragraph or group of paragraphs to which they relate, contain a clear rationale and, where applicable, provide a suggestion for alternative wording. The Specific Matters for Comment requested for the Exposure Draft are provided below.

**Specific Matter for Comment 1:**

Do you agree with the IPSASB’s proposals, and the rationale set out in paragraphs BC4–BC15:

(a) To limit the scope of this Exposure Draft to transfers; and
(b) The resulting definition of a transfer expense?

If not, what changes to the scope and definition would you make?

**Specific Matter for Comment 2:**

Do you agree with the IPSASB’s proposals to distinguish between transfer expenses with performance obligations and transfer expenses without performance obligations?

If not, what **distinction**, if any, would you make?

**Specific Matter for Comment 3:**

Do you agree with the IPSASB’s proposals, and the rationale set out in paragraphs BC16–BC34, for recognizing and measuring transfer expenses with performance obligations as follows:

(a) That a transfer provider has an asset for the right to have a transfer recipient transfer goods and services to third-party beneficiaries; and
(b) As a consequence, the public sector performance obligation approach should be used?

If not, how would you recognize and measure transfer expenses with performance obligations?
**Specific Matter for Comment 4:**

Do you agree with the IPSASB’s proposals, and the rationale set out in paragraphs BC45–BC59 for transfer expenses without performance obligations as follows:

(a) That a transfer provider does not have an asset where a transfer recipient is required to undertake enforceable activities or incur eligible expenditure, but is not required to transfer goods and services to third-party beneficiaries;

(b) As a consequence, an entity should recognize transfer expenses without performance obligations at the earlier of the point at which the transfer provider has a present obligation to provide resources, or has lost control of those resources; and

(c) An entity (transfer provider) should measure transfer expenses without performance obligations at the carrying amount of the resources given up?

If not, how would you recognize and measure transfer expenses without performance obligations?

Objective

2. The objective of this [draft] Standard is to establish the principles that an entity shall apply to report useful information to users of financial statements about the nature, amount, timing and uncertainty of expenditure and cash flows arising from transfer expenses, including transfer expenses given for capital purposes. Paragraphs AG2–AG4 provide additional guidance on meeting the objective.

Scope

3. An entity that prepares and presents financial statements under the accrual basis of accounting shall apply this [draft] Standard in accounting for transfer expenses as defined in this [draft] Standard.

4. An entity shall apply this [draft] Standard to transfer expenses as defined in this [draft] Standard. This [draft] Standard does not apply to:

(a) Operating leases as defined in IPSAS 13, Leases;
(b) Provisions as defined in IPSAS 19, Provisions, Contingent Liabilities and Contingent Assets;
(c) Collective services and individual services as defined in IPSAS 19;
(d) Employee benefits as defined in IPSAS 39, Employee Benefits, including any associated payroll taxes;
(d)(e) Concessionary loans as defined in IPSAS 41, Financial Instruments;
(e)(f) Social benefits as defined in IPSAS 42, Social Benefits;
(f)(g) Insurance contracts (see the international or national accounting standard dealing with insurance contracts);
(g)(h) Share-based payments (see the international or national accounting standard dealing with share-based payments); and
(h)(i) Income taxes (see the international or national accounting standard dealing with income taxes).

5. Contributions from owners and distributions to owners are defined in IPSAS 1, Presentation of Financial Statements. Contributions from owners and distributions to owners do not meet the definition of a transfer expense, as defined in this [draft] Standard, for the following reasons.

(a) Contributions from owners establish a controlling entity’s or an investor’s financial interest in the net assets/equity of the controlled entity or investee. This financial interest is recognized as an asset in the controlling entity’s or the investor’s separate financial statements, and therefore does not satisfy the definition of a transfer expense, which requires that the entity provides a good, service, or asset to another entity without receiving any good, service, or asset in return.
(b) Distributions to owners are future economic benefits or service potential distributed by the entity to all or some of its owners, either as a return on investment or as a return of investment.
Distributions to owners are transfers in response to earlier investments by owners, and therefore do not satisfy the definition of a transfer expense, which requires that the entity provides a good, service, or asset to another entity without receiving any good, service, or asset in return. Consequently, contributions from owners and distributions to owners are outside the scope of this [draft] Standard. An entity shall account for contributions to owners and distributions to owners in accordance with IPSAS 1.

6. A binding arrangement may be partially within the scope of this [draft] Standard and partially within the scope of other Standards.

(a) If the other Standards specify how to separate and/or initially measure one or more parts of the binding arrangement, then an entity shall first apply the separation and/or measurement requirements in those Standards. An entity shall exclude from the transaction consideration or other transfer of resources the amount of the part (or parts) of the binding arrangement that are initially measured in accordance with other Standards and shall apply paragraphs 71–84 (transfer expenses with performance obligations) or paragraphs 102–114 (transfer expenses without performance obligations) to account for the amount of the transaction consideration or other transfer of resources that remains (if any).

(b) If the other Standards do not specify how to separate and/or initially measure one or more parts of the binding arrangement, then the entity shall apply this [draft] Standard to separate and/or initially measure the part (or parts) of the binding arrangement. Paragraphs AG5–AG6 provide additional guidance on the scope of this Standard.

Definitions

7. The following terms are used in this [draft] Standard with the meanings specified:

Stand-alone purchase price (of a good or service) is the price at which an entity would purchase a promised good or service\(^1\) separately from a transfer recipient.

The transaction consideration (for a binding arrangement which imposes one or more performance obligations on a transfer recipient) is the amount of consideration to which an entity (the transfer provider) expects to be obligated to pay in exchange for the transfer recipient transferring promised goods or services to a third-party beneficiary.

A transfer expense is a transaction in which an entity provides a good, service, or other asset to another entity (which may be an individual) without receiving any good, service, or other asset in return (paragraphs AG7–AG8 provide additional guidance).

A transfer provider’s binding arrangement asset is an entity’s right to have goods or services transferred to a third-party beneficiary in exchange for consideration provided.

A transfer provider’s binding arrangement liability is an entity’s obligation to pay consideration in exchange for goods or services that the transfer recipient has transferred.

---

\(^1\) References to goods and services or to goods or services are to be read as incorporating references to assets. This is because a transfer recipient will consider any item transferred to a third-party beneficiary to be a good or service, even if in some cases a third-party beneficiary would classify the item as a non-current asset on initial recognition.
to a third-party beneficiary when that obligation is conditioned on something other than the passage of time (for example, the transfer recipient’s future performance).

8. The following terms are defined in [draft] IPSAS [X] (ED 70), Revenue with Performance Obligations, and are used in this [draft] Standard with the same meaning as in [draft] IPSAS X (ED 70):

- A binding arrangement;
- A contract;
- Control of an asset;
- A performance obligation; and
- A third-party beneficiary.

Paragraphs AG10–AG15 provide additional guidance on binding arrangements. Paragraphs AG16–AG24 provide additional guidance on the enforceability of binding arrangements.

The following terms are defined in [draft] IPSAS [X] (ED 71), Revenue without Performance Obligations, and are used in this [draft] Standard with the same meaning as in [draft] IPSAS X (ED 71):

- Eligible expenditure;
- Enforceable activity;
- Fines;
- Taxes
- Transfer provider; and
- Transfer recipient.

Paragraph AG9 provides additional guidance on the transfer recipient.

Expenses are defined in IPSAS 1.

Terms defined in other IPSAS are used in this [draft] Standard with the same meaning as in those Standards, and are reproduced in the Glossary of Defined Terms published separately.

Transfer Expenses with Performance Obligations

9. An entity may incur transfer expenses in accordance with a binding arrangement it has entered into with a transfer recipient, which requires the transfer recipient to provide goods or services to a third-party beneficiary. Where the binding arrangement imposes performance obligations, as defined in [draft] IPSAS [X] (ED 70), to provide goods or services to a third-party beneficiary on the transfer recipient, an entity (the transfer provider) shall recognize and measure the related expenses by applying the Public Sector Performance Obligation Approach in paragraphs 10–88 below.
Public Sector Performance Obligation Approach

10. To meet the objectives in paragraph 1, this [draft] Standard requires an reporting entity to recognize transfer expenses with performance obligations by applying the following steps:

(a) Step 1: Identifying the binding arrangement with a transfer recipient (see paragraphs 10–22);
(b) Step 2: Identifying the transfer recipient’s performance obligations in the binding arrangement (see paragraphs 23–31);
(c) Step 3: Determining the transaction consideration (see paragraphs 46–70);
(d) Step 4: Allocating the transaction consideration to the transfer recipient’s performance obligations in the binding arrangement (see paragraphs 46 and 71–84); and
(e) Step 5: Recognizing expenses when (or as) the transfer recipient satisfies a performance obligation (see paragraphs 32–45).

Recognition

Identifying the Binding Arrangement (Step 1)

11. An entity (the transfer provider) shall account for a transfer expense which imposes performance obligations to provide goods or services to a third-party beneficiary on the transfer recipient that is within the scope of this [draft] Standard only when all of the following criteria are met:

(a) The parties to the binding arrangement have approved the binding arrangement (in writing, orally or in accordance with other customary practices) and are committed to perform their respective obligations;
(b) The entity can identify each party’s rights regarding the goods or services to be transferred; and
(c) It is probable that the transfer recipient will transfer the goods or services to the third-party beneficiary as specified in the binding arrangement. In evaluating whether the transfer of the goods or services is probable, an entity shall consider only the transfer recipient's ability and intention to transfer the goods or services when they are due.

Paragraph AG26 provides additional guidance. Where one or more of the criteria are not met, an entity (the transfer provider) shall account for the transfer expense in accordance with paragraphs 87–112 (i.e., as a transfer expense without performance obligations).

12. A binding arrangement may include one or more components that meet the criteria in paragraph 10, and another component or components that do not meet the criteria in paragraph 10. An entity shall recognize and measure such a binding arrangement as follows:

(a) The component or components of the binding arrangement that meet the criteria in paragraph 10 shall be treated as a separate binding arrangement, and recognized and measured in accordance with paragraphs 10–88; and
(b) The component or components of the binding arrangement that do not meet the criteria in paragraph 10 shall be treated as a separate binding arrangement for a transfer expense without performance obligations, and recognized and measured in accordance with paragraphs 90–114. Paragraphs AG52–AG53 provide guidance on determining the transaction consideration where components of the binding arrangement do not relate to the transfer recipient’s performance obligations.

13. A binding arrangement creates enforceable rights and obligations on the parties to the arrangement through legal or equivalent means. Factors that determine enforceability may differ between jurisdictions and some enforcement mechanisms may be outside the legal system. Binding arrangements can be written, oral or implied by an entity’s or a sector’s customary practices. The practices and processes for establishing binding arrangements with transfer recipients vary across legal jurisdictions, sectors and entities. In addition, they may vary within an entity (for example, they may depend on the class of transfer recipient or third-party beneficiary, or the nature of the promised goods or services). An entity shall consider those practices and processes in determining whether and when an agreement with a transfer recipient creates enforceable rights and obligations.

14. Some binding arrangements with transfer recipients may have no fixed duration and can be terminated or modified by either party at any time. Other binding arrangements may automatically renew on a periodic basis that is specified in the binding arrangement. An entity shall apply this [draft] Standard to the duration of the binding arrangement in which the parties to the binding arrangement have present enforceable rights and obligations.

15. For the purpose of applying this [draft] Standard, a binding arrangement does not exist if each party to the binding arrangement has the unilateral enforceable right to terminate a wholly unperformed binding arrangement without compensating the other party (or parties). A binding arrangement is wholly unperformed if both of the following criteria are met:

(a) The entity has not yet paid, and is not yet obligated to pay, consideration to the transfer recipient in exchange for promised goods or services; and

(b) The transfer recipient has not yet transferred any promised goods or services to a third-party beneficiary.

16. If a binding arrangement with a transfer recipient meets the criteria in paragraph 10 at the inception of the binding arrangement, an entity shall not reassess those criteria unless there is an indication of a significant change in facts and circumstances. For example, if a transfer recipient’s ability to transfer the promised goods or services deteriorates significantly, an entity would reassess whether it is probable that a third-party beneficiary will receive the goods or services promised in exchange for the consideration.

17. If a binding arrangement imposes performance obligations on a transfer recipient but does not meet the criteria in paragraph 10, an entity shall continue to assess the binding arrangement to determine whether the criteria in paragraph 10 are subsequently met.

18. When a binding arrangement that imposes performance obligations on a transfer recipient does not subsequently meet the criteria in paragraph 10, an entity shall recognize a transfer expense in accordance with paragraphs 89–96 below.
Combination of Binding Arrangements

19.17. An entity shall combine two or more binding arrangements entered into at or near the same time with the same transfer recipient (or related parties of the transfer recipient) and account for the binding arrangements as a single binding arrangement if one or more of the following criteria are met:

(a) The binding arrangements are negotiated as a package with a single economic objective;

(b) The amount of consideration to be paid in one binding arrangement depends on the price or performance of the other binding arrangement; or

(c) The goods or services promised in the binding arrangements (or some goods or services promised in each of the binding arrangements) are a single performance obligation in accordance with paragraphs 23–31.

Modifications to a Binding Arrangement

20.18. A modification to a binding arrangement is a change in the scope or price (or both) of a binding arrangement that is approved by the parties to the binding arrangement. In some sectors and jurisdictions, a modification to a binding arrangement may be described as a variation, an amendment, or a change order. A modification to a binding arrangement exists when the parties to a binding arrangement approve a modification that either creates new or changes existing enforceable rights and obligations of the parties to the binding arrangement. A modification to a binding arrangement could be approved in writing, by oral agreement or implied by an entity's customary practices. If the parties to the binding arrangement have not approved a modification to a binding arrangement, an entity shall continue to apply this [draft] Standard to the existing binding arrangement until the modification to a binding arrangement is approved.

21.19. A modification to a binding arrangement may exist even though the parties to the binding arrangement have a dispute about the scope or price (or both) of the modification or the parties have approved a change in the scope of the binding arrangement but have not yet determined the corresponding change in price. In determining whether the rights and obligations that are created or changed by a modification are enforceable, an entity shall consider all relevant facts and circumstances including the terms of the binding arrangement and other evidence. If the parties to a binding arrangement have approved a change in the scope of the binding arrangement but have not yet determined the corresponding change in price, an entity shall estimate the change to the transaction consideration arising from the modification in accordance with paragraphs 50–54 on estimating variable consideration and paragraphs 55–57 on constraining estimates of variable consideration.

22.20. An entity shall account for a modification to a binding arrangement as a separate binding arrangement if both of the following conditions are present:

(a) The scope of the binding arrangement increases because of the addition of promised goods or services to be transferred to third-party beneficiaries that are distinct (in accordance with paragraphs 27–31); and

(b) The price of the binding arrangement increases by an amount of consideration that reflects the entity’s stand-alone purchase prices of the additional promised goods or services and any appropriate adjustments to that price to reflect the circumstances of the particular binding arrangement.
arrangement. For example, an entity may adjust the stand-alone purchase price of an additional good or service for a discount that the entity receives for repeat purchases.

23.21. If a modification to a binding arrangement is not accounted for as a separate binding arrangement in accordance with paragraph 21, an entity shall account for the promised goods or services not yet received by the third-party beneficiary at the date of the modification to a binding arrangement (i.e., the remaining promised goods or services) in whichever of the following ways is applicable:

(a) An entity shall account for the modification to a binding arrangement as if it were a termination of the existing binding arrangement and the creation of a new binding arrangement, if the remaining goods or services are distinct from the goods or services received by the third-party beneficiary on or before the date of the modification to a binding arrangement. The amount of consideration to be allocated to the remaining performance obligations (or to the remaining distinct goods or services in a single performance obligation identified in accordance with paragraph 23(b)) is the sum of:

(i) The consideration promised to the transfer recipient (including amounts already received by the transfer recipient) that was included in the estimate of the transaction consideration and that had not been recognized as an expense; and

(ii) The consideration promised as part of the modification to a binding arrangement.

(b) An entity shall account for the modification to a binding arrangement as if it were a part of the existing binding arrangement if the remaining goods or services are not distinct and, therefore, form part of a single performance obligation that is partially satisfied at the date of the modification to a binding arrangement. The effect that the modification to a binding arrangement has on the transaction consideration, and on the transfer recipient’s progress towards complete satisfaction of the performance obligation, is recognized as an adjustment to expense (either as an increase in or a reduction of expense) at the date of the modification of a binding arrangement (i.e., the adjustment to expense is made on a cumulative catch-up basis).

(c) If the remaining goods or services are a combination of items (a) and (b), then the entity shall account for the effects of the modification on the unsatisfied (including partially unsatisfied) performance obligations in the modified binding arrangement in a manner that is consistent with the objectives of this paragraph.

Identifying Performance Obligations (Step 2)

24.22. At the inception of the binding arrangement, an entity (the transfer provider) shall assess the goods or services promised by the transfer recipient in a binding arrangement and shall identify as a performance obligation of the transfer recipient each promise to transfer to a third-party beneficiary either:

(a) A good or service (or a bundle of goods or services) that is distinct; or

(b) A series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the third-party beneficiary (see paragraph 24). Paragraphs AG27–AG37 provide additional guidance on identifying performance obligations.
25.23 A series of distinct goods or services has the same pattern of transfer to the third-party beneficiary if both of the following criteria are met:

(a) Each distinct good or service in the series that the transfer recipient promises to transfer to the third-party beneficiary would meet the criteria in paragraph 35 to be a transfer recipient’s performance obligation satisfied over time; and

(b) In accordance with paragraphs 39–40, the same method would be used to measure the transfer recipient’s progress towards complete satisfaction of the performance obligation to transfer each distinct good or service in the series to the third-party beneficiary.

Promises in Transfer Expenses with Performance Obligations

26.24 A binding arrangement with a transfer recipient generally explicitly states the goods or services that a transfer recipient promises to transfer to a third-party beneficiary. However, the performance obligations identified in a binding arrangement with a transfer recipient may not be limited to the goods or services that are explicitly stated in that binding arrangement. This is because a binding arrangement with a transfer recipient may also include promises that are implied by a transfer recipient’s customary practices, published policies or specific statements if, at the time of entering into the binding arrangement, those promises create a valid expectation of the entity (the transfer provider) that the transfer recipient will transfer a good or service to the third-party beneficiary.

27.25 Performance obligations of the transfer recipient do not include activities that a transfer recipient must undertake to fulfil a binding arrangement unless those activities transfer a good or service to a third-party beneficiary. For example, a transfer recipient may need to perform various administrative tasks to set up a binding arrangement. The performance of those tasks does not transfer a service to a third-party beneficiary as the tasks are performed. Therefore, those setup activities are not a performance obligation of the transfer recipient.

Distinct Goods or Services

28.26 Depending on the binding arrangement, promised goods or services promised to be delivered by a transfer recipient to a third-party beneficiary may include, but are not limited to, the following:

(a) Transfer of goods produced by a transfer recipient to a third-party beneficiary (for example, inventory of a manufacturer);

(b) Transfer of goods purchased by a transfer recipient to a third-party beneficiary (for example, merchandise of a retailer);

(c) Transfer of rights to goods or services purchased by a transfer recipient to a third-party beneficiary (for example, emission allowances purchased and subsequently transferred by a transfer recipient);

(d) A transfer recipient performing a task for a third-party beneficiary that is agreed upon in the binding arrangement (for example, a supplier providing computer maintenance services to schools);

(e) A transfer recipient providing a service of standing ready to provide goods or services to third party beneficiaries (for example, paramedics on site at an athletic competition organized by a community group);
(f) A transfer recipient providing a service of arranging for another party to transfer goods or services to a third-party beneficiary (for example, acting as an agent of another party);

(g) A transfer recipient constructing, manufacturing or developing an asset on behalf of a third-party beneficiary (for example, a residential development constructed for a housing association); and

(h) A transfer recipient granting licenses (see paragraphs AG69–AG82).

29.27. A good or service that is promised by a transfer recipient is distinct if both of the following criteria are met:

(a) The entity (the transfer provider) has assessed that the third-party beneficiary can receive economic benefits or service potential from the good or service either on its own or together with other resources that are readily available to the third-party beneficiary (i.e., the good or service is capable of being distinct); and

(b) The transfer recipient's promise to transfer the good or service to the third-party beneficiary is separately identifiable from other promises in the binding arrangement (i.e., the promise to transfer the good or service is distinct within the context of the binding arrangement).

30.28. A third-party beneficiary can receive economic benefits or service potential from a good or service in accordance with paragraph 28(a) if the good or service could be used, consumed, sold for an amount that is greater than scrap value or otherwise held in a way that generates economic benefits or service potential. For some goods or services, a third-party beneficiary may be able to receive the economic benefits or service potential from a good or service on its own. For other goods or services, a third-party beneficiary may be able to receive the economic benefits or service potential from the good or service only in conjunction with other readily available resources. A readily available resource is a good or service that is sold separately (by the transfer recipient or another entity) or a resource that the third-party beneficiary has already obtained from the transfer recipient (including goods or services that the transfer recipient will have already transferred to the third-party beneficiary under the binding arrangement) or from other transactions or events. Various factors may provide evidence that the third-party beneficiary can receive the economic benefits or service potential from the good or service either on its own or in conjunction with other readily available resources. For example, the fact that the transfer recipient regularly provides a good or service separately would indicate that a third-party beneficiary can receive the economic benefits or service potential from the good or service on its own or with other readily available resources.

31.29. In assessing whether a transfer recipient's promises to transfer goods or services to the third-party beneficiary are separately identifiable in accordance with paragraph 28(b), the objective is to determine whether the nature of the promise, within the context of the binding arrangement, is to transfer each of those goods or services individually or, instead, to transfer a combined item or items to which the promised goods or services are inputs. Factors that indicate that two or more promises to transfer goods or services to a third-party beneficiary are not separately identifiable include, but are not limited to, the following:

(a) The transfer recipient provides a significant service of integrating the goods or services with other goods or services promised in the binding arrangement into a bundle of goods or services that represent the combined output or outputs for which the entity (the transfer provider) has entered into binding arrangements. In other words, the transfer recipient is using the goods or
services as inputs to produce or deliver the combined output or outputs specified by the entity (the transfer provider). A combined output or outputs might include more than one phase, element or unit.

(b) One or more of the goods or services significantly modifies or customizes, or are significantly modified or customized by, one or more of the other goods or services promised in the binding arrangement.

(c) The goods or services are highly interdependent or highly interrelated. In other words, each of the goods or services is significantly affected by one or more of the other goods or services in the binding arrangement. For example, in some cases, two or more goods or services are significantly affected by each other because the transfer recipient would not be able to fulfil its promise by transferring each of the goods or services independently.

32.30 If a promised good or service is not distinct, an entity shall combine that good or service with other promised goods or services until it identifies a bundle of goods or services that is distinct. In some cases, that would result in the entity accounting for all the goods or services promised in a binding arrangement as a single performance obligation of the resource recipient.

Satisfaction of Performance Obligations (Step 5)

33.31 An entity (the transfer provider) shall recognize an expense when (or as) the transfer recipient satisfies a performance obligation by transferring a promised good or service (i.e., an asset) to a third-party beneficiary. An asset is transferred when (or as) the third-party beneficiary obtains control of that asset. An entity (the transfer provider) may determine the point at which the third-party beneficiary obtains control of the asset by reference to the transfer recipient losing control of that asset where the entity (the transfer provider) has more reliable information to make this assessment.

Paragraphs AG38–AG51 provide additional guidance on the satisfaction of performance obligations.

34.32 For each performance obligation identified in accordance with paragraphs 23–31, an entity shall determine at the inception of the binding arrangement whether the transfer recipient satisfies the performance obligation over time (in accordance with paragraphs 35–37) or satisfies the performance obligation at a point in time (in accordance with paragraph 38). If the transfer recipient does not satisfy a performance obligation over time, the performance obligation is satisfied at a point in time.

35.33 Goods and services are assets, even if only momentarily, when they are received and used by the third-party beneficiary (as in the case of many services). Control of an asset, which is defined in [draft] IPSAS [X] (ED 70), refers to the ability of the third-party beneficiary to direct the use of, and obtain substantially all of the remaining benefits or service potential from, the asset. Control includes the ability to prevent other entities from directing the use of, and obtaining the economic benefits or service potential from, an asset. The economic benefits or service potential embodied in the asset are the potential cash flows (inflows or savings in outflows), or the capacity to provide services that contribute to achieving the third-party beneficiary’s objectives, that can be obtained directly or indirectly in many ways, such as by:

(a) Using the asset to produce goods or provide services (including public services);
(b) Using the asset to enhance the value of other assets;
(c) Using the asset to settle liabilities or reduce expenses;
(d) Selling or exchanging the asset;
(e) Pledging the asset to secure a loan; and
(f) Holding the asset.

Performance Obligations Satisfied Over Time

36.34. An entity (the transfer provider) recognizes an expense over time when the transfer recipient satisfies a performance obligation over time. A transfer recipient transfers control of a good or service over time and, therefore, satisfies a performance obligation over time, if one of the following criteria is met:

(a) The third-party beneficiary simultaneously receives and consumes the economic benefits or service potential provided by the transfer recipient’s performance as the transfer recipient performs (see paragraphs AG39–AG40);

(b) The transfer recipient’s performance creates or enhances an asset (for example, work in progress) that the third-party beneficiary controls as the asset is created or enhanced (see paragraph AG41); or

(c) The transfer recipient’s performance does not create an asset with an alternative use to the transfer recipient (see paragraph 36) and the transfer recipient has an enforceable right to payment for performance completed to date (see paragraph 37).

37.35. An asset created by a transfer recipient’s performance does not have an alternative use for the transfer recipient if the transfer recipient is either restricted by the binding arrangement from readily directing the asset for another use during the creation or enhancement of that asset or limited practically from readily directing the asset in its completed state for another use. The assessment of whether an asset has an alternative use to the transfer recipient is made at the inception of the binding arrangement. After the inception of the binding arrangement, an entity (the transfer provider) shall not update the assessment of the transfer recipient’s alternative use of an asset unless the parties to the binding arrangement approve a modification to a binding arrangement that substantively changes the performance obligation. Paragraphs AG42–AG44 provide guidance for assessing whether an asset has an alternative use to a transfer recipient.

38.36. An entity shall consider the terms of the binding arrangement, as well as any laws that apply to the binding arrangement, when evaluating whether the transfer recipient has an enforceable right to payment for performance completed to date in accordance with paragraph 35(c). The transfer recipient’s right to payment for performance completed to date does not need to be for a fixed amount. However, at all times throughout the duration of the binding arrangement, the transfer recipient must be entitled to payment for performance completed to date if the binding arrangement is terminated by the entity (the transfer provider) or another party for reasons other than the transfer recipient’s failure to perform as promised. Paragraphs AG45–AG48 provide guidance for assessing the existence and enforceability of a transfer recipient’s right to payment and whether a transfer recipient’s right to payment would entitle it to be paid for its performance completed to date.
An entity (the transfer provider) recognizes an expense at a point in time when the transfer recipient satisfies a performance obligation at a point in time. If a performance obligation is not satisfied over time in accordance with paragraphs 35–37, a transfer recipient satisfies the performance obligation at a point in time. To determine the point in time at which a third-party beneficiary obtains control of a promised asset and the transfer recipient satisfies a performance obligation, the entity (the transfer provider) shall consider the requirements for control in paragraphs 32–34. In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The transfer recipient has a present right to payment for the asset—if an entity (the transfer provider) is presently obliged to pay for an asset, then that may indicate that the third-party beneficiary has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset in exchange.

(b) The third-party beneficiary has legal title to the asset—legal title may indicate which party has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, an asset or to restrict the access of other entities to those economic benefits or service potential. Therefore, the transfer of legal title of an asset may indicate that a third-party beneficiary has obtained control of the asset. If a transfer recipient retains legal title solely as protection against the entity’s (the transfer provider’s) failure to pay, those rights of the transfer recipient would not preclude the third-party beneficiary from obtaining control of an asset.

(c) The transfer recipient has transferred physical possession of the asset—the third-party beneficiary’s physical possession of an asset may indicate that the third-party beneficiary has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset or to restrict the access of other entities to those economic benefits or service potential. However, physical possession may not coincide with control of an asset. For example, in some bill-and-hold arrangements, the transfer recipient may have physical possession of an asset that the third-party beneficiary controls. Paragraphs AG83–AG86 provide guidance on accounting for bill-and-hold arrangements.

(d) The third-party beneficiary has the significant risks and rewards of ownership of the asset—the transfer of the significant risks and rewards of ownership of an asset to the third-party beneficiary may indicate that the third-party beneficiary has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate performance obligation of the transfer recipient in addition to the performance obligation to transfer the asset. For example, a transfer recipient may have transferred control of an asset to a third-party beneficiary but not yet satisfied an additional performance obligation to provide maintenance services related to the transferred asset.

(e) The third-party beneficiary has accepted the asset—the third-party beneficiary’s acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits and service potential from, the asset. To evaluate the
effect of the acceptance clause in a binding arrangement on when control of an asset is transferred, an entity shall consider the guidance in paragraphs AG87–AG88.

Measuring Progress Towards Complete Satisfaction of a Performance Obligation

40.38. For each performance obligation satisfied over time by a transfer recipient in accordance with paragraphs 35–37, an entity (the transfer provider) shall recognize an expense over time by measuring the transfer recipient’s progress towards complete satisfaction of that performance obligation. The objective when measuring progress is to depict a transfer recipient’s performance in transferring control of goods or services promised to the third-party beneficiary (i.e., the satisfaction of the transfer recipient’s performance obligation).

41.39. An entity (the transfer provider) shall apply a single method of measuring the transfer recipient’s progress for each of the transfer recipient’s performance obligations satisfied over time and the entity (the transfer provider) shall apply that method consistently to similar performance obligations and in similar circumstances. At the end of each reporting period, an entity shall remeasure a transfer recipient’s progress towards complete satisfaction of a performance obligation satisfied over time.

Methods for Measuring Progress

42.40. Appropriate methods for an entity (a transfer provider) to measure the transfer recipient’s progress are usually output methods. Input methods may also be used where such information is both available to the entity (the transfer provider) and relevant to the assessment of an expense. Paragraphs AG49–AG51 provide guidance for using output methods and input methods to measure a transfer recipient’s progress towards complete satisfaction of a performance obligation. In determining the appropriate method for measuring progress, an entity shall consider the nature of the good or service that the transfer recipient promised to transfer to the third-party beneficiary.

43.41. When applying a method for measuring a transfer recipient’s progress, an entity shall exclude from the measure of progress any goods or services for which the transfer recipient does not transfer control to a third-party beneficiary. Conversely, an entity shall include in the measure of progress any goods or services for which the transfer recipient does transfer control to a third-party beneficiary when satisfying that performance obligation.

44.42. As circumstances change over time, an entity (the transfer provider) shall update its measure of a transfer recipient’s progress to reflect any changes in the outcome of the transfer recipient’s performance obligation. Such changes to an entity’s measure of progress shall be accounted for as a change in accounting estimate in accordance with IPSAS 3, Accounting Policies, Changes in Accounting Estimates and Errors.

Reasonable Measures of Progress

45.43. An entity (the transfer provider) shall recognize an expense for a transfer recipient’s performance obligation satisfied over time only if the entity can reasonably measure the transfer recipient’s progress towards complete satisfaction of the performance obligation. An entity would not be able to reasonably measure a transfer recipient’s progress towards complete satisfaction of a performance obligation if the entity (the transfer provider) lacks reliable information that would be required to apply an appropriate method of measuring progress.
In some circumstances (for example, in the early stages of a binding arrangement), an entity (the transfer provider) may not be able to reliably measure the outcome of a transfer recipient’s performance obligation at that point. Where the entity expects to be able to measure the outcome of a transfer recipient’s performance obligation at a later date, the entity shall not recognize an expense until such time that it can reasonably measure the outcome of the transfer recipient’s performance obligation. Where the entity does not expect to be able to measure the transfer recipient’s progress towards complete satisfaction of the performance obligation, it shall recognize an expense for a transfer recipient’s performance obligation satisfied at a point in time.

### Measurement

When (or as) a transfer recipient satisfies a performance obligation, an entity (the transfer provider) shall recognize as an expense the amount of the transaction consideration (which excludes estimates of variable consideration that are constrained in accordance with paragraphs 55–57) that is allocated to that performance obligation.

#### Determining the Transaction Consideration (Step 3)

An entity (a transfer provider) shall consider the terms of the binding arrangement and its customary practices to determine the transaction consideration. The transaction consideration is the value of the resources (i.e., the consideration) that the entity expects to transfer to the transfer recipient, in exchange for transfer recipient transferring the promised goods or services to the third-party beneficiary. The consideration promised in a binding arrangement with performance obligations may include fixed amounts, variable amounts, or both.

The nature, timing and amount of consideration promised by an entity (a transfer provider) affect the estimate of the transaction consideration. When determining the transaction consideration, an entity shall consider the effects of all of the following:

- Variable consideration (see paragraphs 50–54 and 58);
- Constraining estimates of variable consideration (see paragraphs 55–57);
- The existence of a significant financing component in the binding arrangement (see paragraphs 59–64);
- Non-cash consideration (see paragraphs 65–67); and
- Consideration receivable by an entity (see paragraphs 68–70).

For the purpose of determining the transaction consideration, an entity (a transfer provider) shall assume that the goods or services will be transferred by the transfer recipient to the third-party beneficiary as promised in accordance with the existing binding arrangement and that the binding arrangement will not be cancelled, renewed or modified.

### Variable Consideration

If the consideration promised in a binding arrangement includes a variable amount, an entity (a transfer provider) shall estimate the amount of consideration to which the transfer recipient will be entitled (and which the entity will be obligated to pay) in exchange for transferring the promised goods or services to the third-party beneficiary.
An amount of consideration can vary because of discounts, rebates, refunds, credits, price concessions, incentives, performance bonuses, penalties or other similar items. The promised consideration can also vary if a transfer recipient’s entitlement to the consideration is contingent on the occurrence or non-occurrence of a future event. For example, an amount of consideration would be variable if either a product was provided with a right of return or a fixed amount is promised as a performance bonus on achievement of a specified milestone.

The variability relating to the consideration promised by an entity (the transfer provider) may be explicitly stated in the binding arrangement. In addition to the terms of the binding arrangement, the promised consideration is variable if either of the following circumstances exists:

(a) The entity (the transfer provider) has a valid expectation arising from a transfer recipient’s customary practices, published policies or specific statements that the transfer recipient will accept an amount of consideration that is less than the price stated in the binding arrangement. That is, it is expected that the transfer recipient will offer a price concession. Depending on the jurisdiction, sector or transfer recipient this offer may be referred to as a discount, rebate, refund or credit.

(b) Other facts and circumstances indicate that the transfer recipient’s intention, when entering into the binding arrangement with the entity (the transfer provider), is to offer a price concession to the entity.

An entity (the transfer provider) shall estimate an amount of variable consideration by using either of the following methods, depending on which method the entity expects to better predict the amount of consideration which it will be required to pay to the transfer recipient:

(a) The expected value—the expected value is the sum of probability-weighted amounts in a range of possible consideration amounts. An expected value may be an appropriate estimate of the amount of variable consideration if an entity has a large number of binding arrangements with similar characteristics.

(b) The most likely amount—the most likely amount is the single most likely amount in a range of possible consideration amounts (i.e., the single most likely outcome of the binding arrangement). The most likely amount may be an appropriate estimate of the amount of variable consideration if the binding arrangement has only two possible outcomes (for example, a transfer recipient either achieves a performance bonus or does not).

An entity (a transfer provider) shall apply one method consistently throughout the binding arrangement when estimating the effect of an uncertainty on an amount of variable consideration which the entity will be required to pay to the transfer recipient. In addition, an entity shall consider all the information (historical, current and forecast) that is reasonably available to the entity and shall identify a reasonable number of possible consideration amounts. The information that an entity uses to estimate the amount of variable consideration would typically be similar to the information that the entity’s management uses during the bid-and-proposal assessment process.

Constraining Estimates of Variable Consideration

An entity (the transfer provider) shall include in the transaction consideration some or all of an amount of variable consideration estimated in accordance with paragraph 53 only to the extent that
it is probable that a significant reversal in the amount of cumulative expense recognized will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

57.55. In assessing whether it is probable that a significant reversal in the amount of cumulative expense recognized will not occur once the uncertainty related to the variable consideration is subsequently resolved, an entity (a transfer provider) shall consider both the likelihood and the magnitude of the expense reversal. Factors that could increase the likelihood or the magnitude of an expense reversal include, but are not limited to, any of the following:

(a) The amount of consideration is highly susceptible to factors outside the entity’s influence. Those factors may include volatility in a market, the judgment or actions of third parties, weather conditions and a high risk of obsolescence of the promised good or service.

(b) The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.

(c) The entity’s experience (or other evidence) with similar types of binding arrangements is limited, or that experience (or other evidence) has limited predictive value.

(d) The transfer recipient has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar binding arrangements in similar circumstances.

(e) The binding arrangement has a large number and broad range of possible consideration amounts.

58.56. An entity (the transfer provider) shall apply paragraph AG80 to account for an expense in the form of a usage-based royalty that is promised in exchange for a license of intellectual property.

Reassessment of Variable Consideration

59.57. At the end of each reporting period, an entity (the transfer provider) shall update the estimated transaction consideration (including updating its assessment of whether an estimate of variable consideration is constrained) to represent faithfully the circumstances present at the end of the reporting period and the changes in circumstances during the reporting period. The entity (the transfer provider) shall account for changes in the transaction consideration in accordance with paragraphs 85–88.

The Existence of a Significant Financing Component in the Binding Arrangement

60.58. In determining the transaction consideration, an entity shall adjust the promised amount of consideration for the effects of the time value of money if the timing of payments agreed to by the parties to the binding arrangement (either explicitly or implicitly) provides the entity (the transfer provider) or the transfer recipient with a significant benefit of financing the transfer of goods or services to the third-party beneficiary. In those circumstances, the binding arrangement contains a significant financing component. A significant financing component may exist regardless of whether the promise of financing is explicitly stated in the binding arrangement or implied by the payment terms agreed to by the parties to the binding arrangement.

61.59. The objective when adjusting the promised amount of consideration for a significant financing component is for an entity (the transfer provider) to recognize an expense at an amount that reflects
the price that the entity would have paid for the promised goods or services if the entity had paid cash for those goods or services when (or as) they transfer to the third-party beneficiary (i.e., the cash price). An entity shall consider all relevant facts and circumstances in assessing whether a binding arrangement contains a financing component and whether that financing component is significant to the binding arrangement, including both of the following:

(a) The difference, if any, between the amount of promised consideration and the cash price of the promised goods or services; and

(b) The combined effect of both of the following:

(i) The expected length of time between when the transfer recipient transfers the promised goods or services to the third-party beneficiary and when the entity (the transfer provider) pays for those goods or services; and

(ii) The prevailing interest rates in the relevant market.

Notwithstanding the assessment in paragraph 60, a binding arrangement with a transfer recipient would not have a significant financing component if any of the following factors exist:

(a) The entity (the transfer provider) paid for the goods or services in advance and the timing of the transfer of those goods or services is at the discretion of the entity (the transfer provider) or a third-party beneficiary.

(b) A substantial amount of the consideration promised by the entity (the transfer provider) is variable and the amount or timing of that consideration varies on the basis of the occurrence or non-occurrence of a future event that is not substantially within the control of the entity (the transfer provider) or the transfer recipient (for example, if the consideration is a third-party beneficiary usage-based royalty).

(c) The difference between the promised consideration and the cash price of the good or service (as described in paragraph 60) arises for reasons other than the provision of finance to either the entity (the transfer provider) or the transfer recipient, and the difference between those amounts is proportional to the reason for the difference. For example, the payment terms might provide the entity (the transfer provider) or the transfer recipient with protection from the other party failing to adequately complete some or all of its obligations under the binding arrangement.

As a practical expedient, an entity (the transfer provider) need not adjust the promised amount of consideration for the effects of a significant financing component if the entity expects, at the inception of the binding arrangement, that the period between when the transfer recipient transfers a promised good or service to a third-party beneficiary and when the entity (the transfer provider) pays for that good or service will be one year or less.

To meet the objective in paragraph 60 when adjusting the promised amount of consideration for a significant financing component, an entity (the transfer provider) shall use the discount rate that would be reflected in a separate financing transaction between the entity and the transfer recipient at the inception of the binding arrangement. That rate would reflect the credit characteristics of the party receiving financing in the binding arrangement, as well as any collateral or security provided by the entity (the transfer provider) or the transfer recipient, including assets transferred in the binding arrangement. An entity may be able to determine that rate by identifying the rate that discounts the
nominal amount of the promised consideration to the price that the entity (the transfer provider) would pay in cash for the goods or services when (or as) they transfer to a third-party beneficiary. After the inception of the binding arrangement, an entity shall not update the discount rate for changes in interest rates or other circumstances.

65. An entity shall present the effects of financing (interest expense or interest revenue) separately from transfer expenses with performance obligations in the statement of financial performance. Interest expense or interest revenue is recognized only to the extent that a transfer provider’s binding arrangement liability (or payable) or a transfer provider’s binding arrangement asset is recognized in accounting for a transfer expense with performance obligations.

Non-Cash Consideration

66. To determine the transaction consideration for binding arrangements in which the entity (the transfer provider) promises consideration in a form other than cash, the entity (the transfer provider) shall measure the non-cash consideration (or promise of non-cash consideration) at the carrying amounts of the assets transferred or to be transferred.

67. If the carrying amount of the asset is not known, for example because the entity (the transfer provider) has promised to provide services, and the costs of those services will not be known until the services have been provided, the entity shall apply paragraphs 50–57 in measuring the non-cash consideration.

68. If the entity (the transfer provider) contributes goods or services (for example, materials, equipment or labor) to facilitate a transfer recipient’s fulfilment of the binding arrangement, the entity (the transfer provider) shall assess whether it loses control of those contributed goods or services. If so, the entity (the transfer provider) shall account for the contributed goods or services as non-cash consideration transferred to the transfer recipient.

Consideration Receivable by a Transfer Provider

69. Consideration receivable by an entity (a transfer provider) includes cash amounts that a transfer recipient pays, or expects to pay, to the entity. Consideration receivable by an entity (a transfer provider) also includes credit or other items (for example, a coupon or voucher) that can be applied against amounts owed to the transfer recipient. An entity shall account for consideration receivable from a transfer recipient as a reduction of the transaction consideration and, therefore, of an expense unless the receipt by the entity (the transfer provider) is in exchange for a distinct good or service (as described in paragraphs 27–31) that the entity (the transfer provider) transfers to the transfer recipient. If the consideration receivable by an entity (a transfer provider) includes a variable amount, the entity shall estimate the transaction consideration (including assessing whether the estimate of variable consideration is constrained) in accordance with paragraphs 50–57.

70. If consideration receivable by an entity (a transfer provider) is a payment for a distinct good or service transferred to a transfer recipient, then the entity shall account for the sale of the good or service in accordance with [draft] IPSAS [X] (ED 70). However, if the amount of consideration receivable by the entity (the transfer provider) exceeds the carrying amount of the distinct good or service that the entity transfers to the transfer recipient (or, where the carrying amount is not known, the estimated cost of the distinct good or service), then the entity shall account for such an excess as a reduction of the transaction consideration.
Accordingly, if consideration receivable by an entity (a transfer provider) is accounted for as a reduction of the transaction consideration, an entity shall recognize the reduction of an expense when (or as) the later of either of the following events occurs:

(a) The entity recognizes an expense for the receipt by the third-party beneficiary of the related goods or services from the transfer recipient; and
(b) The transfer recipient pays or promises to pay the consideration (even if the payment is conditional on a future event). That promise might be implied by the transfer recipient's customary practices.

Allocating the Transaction Consideration to Performance Obligations (Step 4)

The objective when allocating the transaction consideration is for an entity (the transfer provider) to allocate the transaction consideration to each of the transfer recipient's performance obligations (or distinct goods or services) in an amount that depicts the cost which the entity (the transfer provider) expects to incur in exchange for the promised goods or services being transferred to a third-party beneficiary.

To meet the allocation objective, an entity (a transfer provider) shall allocate the transaction consideration to each of the transfer recipient's performance obligations identified in the binding arrangement on a relative stand-alone purchase price basis in accordance with paragraphs 74–78, except as specified in paragraphs 79–81 (for allocating discounts) and paragraphs 82–84 (for allocating consideration that includes variable amounts).

Paragraphs 74–84 do not apply if a binding arrangement only imposes one performance obligation on the transfer recipient. However, paragraphs 82–84 may apply if a transfer recipient promises to transfer a series of distinct goods or services identified as a single performance obligation in accordance with paragraph 23(b) and the promised consideration includes variable amounts.

Allocation Based on Stand-Alone Purchase Prices

To allocate the transaction consideration to each of the transfer recipient's performance obligations on a relative stand-alone purchase price basis, an entity (a transfer provider) shall determine the stand-alone purchase price at the inception of the binding arrangement of the distinct good or service underlying each of the transfer recipient's performance obligation in the binding arrangement and allocate the transaction consideration in proportion to those stand-alone purchase prices.

The stand-alone purchase price is the price at which an entity (the transfer provider) would purchase a promised good or service to be transferred to a third-party beneficiary separately from a transfer recipient. The best evidence of a stand-alone purchase price is the observable price of a good or service when the entity (the transfer provider) purchases that good or service separately in similar circumstances and from similar transfer recipients. In a binding arrangement, stated price or a list price for a good or service may be (but shall not be presumed to be) the stand-alone purchase price of that good or service.

If a stand-alone purchase price is not directly observable, an entity (a transfer provider) shall estimate the stand-alone purchase price at an amount that would result in the allocation of the transaction consideration meeting the allocation objective in paragraph 71. When estimating a stand-
alone purchase price, an entity (the transfer provider) shall consider all information (including entity-specific factors, information about the transfer recipient or class of transfer recipient, and market conditions where relevant) that is reasonably available to the entity. In doing so, an entity shall maximize the use of observable inputs and apply estimation methods consistently in similar circumstances.

78.76. Suitable methods for estimating the stand-alone purchase price of a good or service include, but are not limited to, the following:

(a) Adjusted market assessment approach—an entity (the transfer provider) could evaluate the market in which it purchases goods or services to be transferred to third-party beneficiaries and estimate the price that a transfer recipient in that market would be willing to accept for those goods or services. That approach might include referring to prices from the other entities providing similar goods or services.

(b) Residual approach—an entity may estimate the stand-alone purchase price by reference to the total transaction consideration less the sum of the observable stand-alone purchase prices of other goods or services promised in the binding arrangement. However, an entity may use a residual approach to estimate, in accordance with paragraph 76, the stand-alone purchase price of a good or service only if one of the following criteria is met:

(i) The entity (the transfer provider) purchases the same good or service from different transfer recipients (at or near the same time) for a broad range of amounts (i.e., the purchase price is highly variable because a representative stand-alone purchase price is not discernible from past transactions or other observable evidence); or

(ii) The entity (the transfer provider) has not previously purchased the good or service on a stand-alone basis (i.e., the purchase price is uncertain).

79.77. A combination of methods may need to be used to estimate the stand-alone purchase prices of the goods or services promised by the transfer recipient in the binding arrangement if two or more of those goods or services have highly variable or uncertain stand-alone purchase prices. For example, an entity (a transfer provider) may use a residual approach to estimate the aggregate stand-alone purchase price for those promised goods or services with highly variable or uncertain stand-alone purchase prices and then use another method to estimate the stand-alone purchase prices of the individual goods or services relative to that estimated aggregate stand-alone purchase price determined by the residual approach. When an entity uses a combination of methods to estimate the stand-alone purchase price of each promised good or service in the binding arrangement, the entity shall evaluate whether allocating the transaction consideration at those estimated stand-alone purchase prices would be consistent with the allocation objective in paragraph 71 and the requirements for estimating stand-alone purchase prices in paragraph 76.

Allocation of a Discount

80.78. An entity (a transfer provider) receives a discount for purchasing a bundle of goods or services if the sum of the stand-alone purchase prices of those promised goods or services in the binding arrangement exceeds the promised consideration in a binding arrangement. Except when an entity (the transfer provider) has observable evidence in accordance with paragraph 80 that the entire discount relates to only one or more, but not all, of the transfer recipient’s performance obligations in
Exposure Draft 72, Transfer Expenses

a binding arrangement, the entity shall allocate a discount proportionately to all performance obligations in the binding arrangement. The proportionate allocation of the discount in those circumstances is a consequence of the entity (the transfer provider) allocating the transaction consideration to each of the transfer recipient’s performance obligations on the basis of the relative stand-alone purchase prices of the underlying distinct goods or services.

81.79. An entity (the transfer provider) shall allocate a discount entirely to one or more, but not all, of the transfer recipient’s performance obligations in the binding arrangement if all of the following criteria are met:

(a) The entity (the transfer provider) regularly purchases each distinct good or service (or each bundle of distinct goods or services) in the binding arrangement on a stand-alone basis;

(b) The entity (the transfer provider) also regularly purchases on a stand-alone basis a bundle (or bundles) of some of those distinct goods or services at a discount to the stand-alone purchase prices of the goods or services in each bundle; and

(c) The discount attributable to each bundle of goods or services described in paragraph 80(b) is substantially the same as the discount in the binding arrangement and an analysis of the goods or services in each bundle provides observable evidence of the transfer recipient’s performance obligation (or performance obligations) to which the entire discount in the binding arrangement belongs.

82.80. If a discount is allocated entirely to one or more of the transfer recipient’s performance obligations in the binding arrangement in accordance with paragraph 80, an entity (the transfer provider) shall allocate the discount before using the residual approach to estimate the stand-alone purchase price of a good or service in accordance with paragraph 77(b).

Allocation of Variable Consideration

83.81. Variable consideration that is promised in a binding arrangement may be attributable to the entire binding arrangement or to a specific part of the binding arrangement, such as either of the following:

(a) One or more, but not all, of the transfer recipient’s performance obligations in the binding arrangement (for example, a bonus may be contingent on a third-party beneficiary receiving a promised good or service within a specified period of time); or

(b) One or more, but not all, distinct goods or services promised by the transfer recipient in a series of distinct goods or services that forms part of a single performance obligation in accordance with paragraph 23(b) (for example, the consideration promised for the second year of a two-year cleaning service binding arrangement will increase on the basis of movements in a specified inflation index).

84.82. An entity (the transfer provider) shall allocate a variable amount (and subsequent changes to that amount) entirely to one of a transfer recipient’s performance obligations or to a distinct good or service that forms part of a transfer recipient’s single performance obligation in accordance with paragraph 23(b) if both of the following criteria are met:

(a) The terms of a variable payment relate specifically to the transfer recipient’s efforts to satisfy the performance obligation or transfer the distinct good or service to a third-party beneficiary.
Exposure Draft 72, Transfer Expenses

(or to a specific outcome from satisfying the performance obligation or transferring the distinct good or service to a third-party beneficiary); and

(b) Allocating the variable amount of consideration entirely to one of the transfer recipient’s performance obligations or the distinct good or service is consistent with the allocation objective in paragraph 71 when considering all of the performance obligations and payment terms in the binding arrangement.

85.83. The allocation requirements in paragraphs 71–81 shall be applied to allocate the remaining amount of the transaction consideration that does not meet the criteria in paragraph 83.

Changes in the Transaction Consideration

86.84. After the inception of the binding arrangement, the transaction consideration can change for various reasons, including the resolution of uncertain events or other changes in circumstances that change the amount of consideration which an entity expects to pay in exchange for the promised goods or services to be transferred to third-party beneficiaries.

87.85. An entity (the transfer provider) shall allocate to the transfer recipient’s performance obligations in the binding arrangement any subsequent changes in the transaction consideration on the same basis as at the inception of the binding arrangement. Consequently, an entity shall not reallocate the transaction consideration to reflect changes in stand-alone purchase prices after the inception of the binding arrangement. Amounts allocated to a satisfied performance obligation shall be recognized as an expense, or as a reduction of an expense, in the period in which the transaction consideration changes.

88.86. An entity (a transfer provider) shall allocate a change in the transaction consideration entirely to one or more, but not all, of the transfer recipient’s performance obligations or distinct goods or services promised in a series that forms part of a single performance obligation in accordance with paragraph 23(b) only if the criteria in paragraph 83 on allocating variable consideration are met.

89.87. An entity (the transfer provider) shall account for a change in the transaction consideration that arises as a result of a modification to a binding arrangement in accordance with paragraphs 19–22. However, for a change in the transaction consideration that occurs after a modification to a binding arrangement, an entity shall apply paragraphs 85–87 to allocate the change in the transaction consideration in whichever of the following ways is applicable:

(a) An entity (the transfer provider) shall allocate the change in the transaction consideration to the transfer recipient’s performance obligations identified in the binding arrangement before the modification if, and to the extent that, the change in the transaction consideration is attributable to an amount of variable consideration promised before the modification and the modification is accounted for in accordance with paragraph 22(a).

(b) In all other cases in which the modification was not accounted for as a separate binding arrangement in accordance with paragraph 21, an entity (the transfer provider) shall allocate the change in the transaction consideration to the transfer recipient’s performance obligations in the modified binding arrangement (i.e., the transfer recipient’s performance obligations that were unsatisfied or partially unsatisfied immediately after the modification).
Transfer Expenses without Performance Obligations

**90.88.** An entity (a transfer provider) shall recognize and measure transfer expenses without performance obligations in accordance with paragraphs 90–118 below. Transfer expenses without performance obligations may arise:

(a) Where the entity (the transfer provider) incurs expenses in accordance with a binding arrangement it has entered into with a transfer recipient, and where the binding arrangement imposes requirements on the transfer recipient to undertake enforceable activities and/or requirements to incur eligible expenditure on the transfer recipient, as defined in [draft] IPSAS [X] (ED 71), rather than performance obligations, as defined in [draft] IPSAS [X] (ED 70); or

(b) Where the entity (the transfer provider) incurs expenses without the existence of a binding arrangement.

**Recognition**

**91.89.** An entity (a transfer provider) shall recognize a transfer expense without performance obligations at the earlier of the following dates:

(a) When the entity (the transfer provider) has a present obligation to transfer resources to a transfer recipient. In such cases, the entity (the transfer provider) shall recognize a liability representing its obligation to transfer the resources; and

(b) When the entity (the transfer provider) ceases to control the resources; this will usually be the date at which it transfers the resources to the transfer recipient. In such cases, the entity derecognizes the resources it ceases to control in accordance with other Standards.

**92.90.** For a present obligation to exist, the transfer recipient must be able to enforce the transfer of resources by the entity (the transfer provider), i.e., there must be a binding arrangement that imposes requirements to undertake enforceable activities and/or requirements to incur eligible expenditure on the transfer recipient. For a binding arrangement to exist, the following conditions must be met:

(a) The parties to the binding arrangement have approved the binding arrangement (in writing, orally or in accordance with other customary practices) and are committed to perform their respective obligations;

(b) The entity can identify each party’s rights regarding the obligations to be performed;

(c) The entity can identify the payment terms for the contribution to be transferred; and

(d) It is probable that the transfer recipient will perform its obligations as specified in the binding arrangement. In evaluating whether the performance of the transfer recipient’s obligations is probable, an entity shall consider only the transfer recipient’s ability and intention to perform its obligations in accordance with the terms of the binding arrangement.

**93.91.** Transfers to be made outside of a binding arrangement are not enforceable by the transfer recipient, and no expense is recognized prior to the entity (the transfer provider) transferring the resources. Paragraphs AG16–AG24 provide additional guidance on enforceability.
For the purpose of applying this [draft] Standard, where a transfer expense without performance obligations is to be made under a binding arrangement, an entity (the transfer provider) does not recognize a liability or an expense, the transfer expense without performance obligations does not exist if each party to the binding arrangement has the unilateral enforceable right to terminate a wholly unperformed binding arrangement without compensating the other party (or parties). A binding arrangement is wholly unperformed if both of the following criteria are met:

(a) The entity (the transfer provider) has not yet transferred, and is not yet obligated to transfer, any resources to the transfer recipient; and

(b) The transfer recipient has not yet performed any activities that it agreed to perform as part of the binding arrangement.

Debt Forgiveness

An entity (a transfer provider) may waive their right to collect a debt owed by another entity (a transfer recipient), effectively canceling the debt. The entity (the transfer provider) shall recognize an expense at the date that it derecognizes (in accordance with IPSAS 41, Financial Instruments) the financial asset, or portion of the financial asset, that it has waived its right to collect.

Where a controlling entity (a transfer provider) forgives debt owed by a wholly-owned controlled entity, or assumes its liabilities, the transaction may be a contribution from owners, as described in paragraph 4. In accordance with paragraph 4, contributions from owners are outside the scope of this [draft] Standard.

Transfer Expenses without Performance Obligations Made as a Series of Transfers

Transfer expenses without performance obligations may be made as a series of transfers of resources, for example where the entity enters into a binding arrangement to provide annual funding over a three-year period. An entity applies the requirements of paragraphs 90–93 to each transfer of resources to determine whether an expense is to be recognized.

Transfer Expenses without Performance Obligations Subject to Appropriations

Where a binding arrangement specifies that the resources to be transferred to a transfer recipient by an entity (the transfer provider) are subject to the an appropriation being approved, the entity (the transfer provider) considers substance over form. The limitation (that the resources to be transferred are subject to the an appropriation being approved) has substance if the entity (the transfer provider) is prohibited from transferring the resources until the appropriation is approved.

Transfer expenses without performance obligations that are, in substance, subject to appropriations shall not be recognized as a liability prior to the funds being appropriated. Following the appropriation, an entity (a transfer provider) applies paragraphs 90–96 in determining when to recognize an expense. Paragraphs AG96–AG100 provide additional guidance on appropriations.

Modifications to a Binding Arrangement

A modification to a binding arrangement is a change in the scope or price (or both) of a binding arrangement that is approved by the parties to the binding arrangement. In some sectors and jurisdictions, a modification to a binding arrangement may be described as a variation, an amendment, or a change order. A modification to a binding arrangement exists when the parties to a
binding arrangement approve a modification that either creates new or changes existing enforceable rights and obligations of the parties to the binding arrangement. A modification to a binding arrangement could be approved in writing, by oral agreement or implied by an entity’s customary practices. If the parties to the binding arrangement have not approved a modification to a binding arrangement, an entity shall continue to apply this [draft] Standard to the existing binding arrangement until the modification to a binding arrangement is approved.

101.99. An entity (a transfer provider) shall account for modifications to a binding arrangement for transfer expenses without performance obligations as follows:

(a) No adjustment is recognized for resources already transferred by the entity (the transfer provider) to the transfer recipient and for which an expense has been recognized; and

(b) An entity (a transfer provider) shall reassess the extent to which it has a present obligation to transfer resources to the transfer recipient at the date of the modification, based on the terms of the modified binding arrangement. Any difference between the present obligation based on the terms of the modified binding arrangement and the amount previously recognized as a liability shall be accounted for as an adjustment to expenses at the date of the modification.

Taxes Paid or Payable

102.100. Taxes are defined in [draft] IPSAS [X] (ED 71). For the purpose of applying this [draft] Standard, an obligation to pay tax (except income taxes or payroll taxes which, in accordance with paragraph 3, are outside the scope of this [draft] Standard) to a public sector entity is a transfer expense without performance obligations. An entity recognizes an asset for taxes paid in advance of having a present obligation to pay the taxes because in such circumstances it has the right to an immediate refund and therefore has not lost control of the transferred resources (see paragraph 90(b)). Paragraphs AG101–AG108 provide guidance on accounting for taxes paid or payable.

Measurement

Initial Measurement

403.101. Where an entity (a transfer provider) recognizes an expense at the date it transfers the resources to the transfer recipient, the entity shall measure the expense at the carrying amount of the resources transferred.

404.102. Where an entity (a transfer provider) recognizes an expense prior to transferring the resources to the transfer recipient, it shall measure the expense and liability at the best estimate of the costs that the entity (the transfer provider) will incur in settling the liability. The costs that the entity will incur in settling the liability may include fixed costs, variable costs, or both.

405.103. When determining the costs that the entity (the transfer provider) will incur in settling the liability, an entity shall consider the effects of all of the following:

(a) Variable costs;

(b) Constraining estimates of variable costs;

(c) Time value of money; and

(d) Non-cash transfers.
### Variable Costs

**406.104.** A transfer expense without performance obligations may include variable costs where, for example, the entity (the transfer provider) has agreed to meet the costs, or a portion of the costs, incurred by the transfer recipient in carrying out a specified activity. Such arrangements may also specify a maximum amount for the transfer expense without performance obligations. An entity’s (a transfer provider’s) best estimate of the amount it will incur to settle the liability reflects the entity’s assessment of the costs that the transfer recipient is likely to incur.

**107.105.** An entity (a transfer provider) shall estimate an amount of variable costs by using either of the following methods, depending on which method the entity expects to better predict the amount of costs it will incur:

<table>
<thead>
<tr>
<th>Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) The expected value—the expected value is the sum of probability-weighted amounts in a range of possible cost amounts. An expected value may be an appropriate estimate of the amount of variable costs if an entity (a transfer provider) has a large number of binding arrangements with similar characteristics.</td>
<td></td>
</tr>
<tr>
<td>(b) The most likely amount—the most likely amount is the single most likely amount in a range of possible cost amounts (i.e., the single most likely outcome of the binding arrangement). The most likely amount may be an appropriate estimate of the amount of variable costs if the binding arrangement has only two possible outcomes (for example, a transfer recipient either purchases a new asset or refurbishes an existing asset).</td>
<td></td>
</tr>
</tbody>
</table>

**408.106.** For the purpose of determining the best estimate of the costs it will incur in settling the liability, an entity (a transfer provider) shall assume that the transfer recipient will carry out the specified activities as promised in accordance with the existing binding arrangement and that the binding arrangement will not be cancelled or modified.

### Constraining Estimates of Variable Consideration

**409.107.** Where an entity’s (a transfer provider’s) best estimate of the amount it will incur to settle the liability includes an element of variable consideration in accordance with paragraph 106, that element shall be included in the entity’s (the transfer provider’s) best estimate only to the extent that it is highly probable that a significant reversal in the amount of cumulative expense recognized will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

### Time Value of Money

**110.108.** An entity (a transfer provider) shall adjust the promised amount of resources to be transferred to the transfer recipient for the effects of the time value of money if the timing of payments agreed to by the parties to the binding arrangement (either explicitly or implicitly) provides the transfer recipient with a significant benefit of financing the activities the transfer provider-recipient has agreed to perform. In those circumstances, the binding arrangement contains a significant financing component. A significant financing component may exist regardless of whether the promise of financing is explicitly stated in the binding arrangement or implied by the payment terms agreed to by the parties to the binding arrangement.

**111.109.** An entity (a transfer provider) shall consider all relevant facts and circumstances in assessing whether a binding arrangement contains a financing component and whether that financing
component is significant to the binding arrangement, including the combined effect of both of the following:

(a) The expected length of time between when the transfer recipient performs the activities it has promised to perform and when the entity (the transfer provider) transfers the promised resources; and

(b) The prevailing interest rates in the relevant market.

112.110. To meet the objective in paragraph 110 when adjusting the promised transfer or resources for a significant financing component, an entity (a transfer provider) shall use the discount rate that would be reflected in a separate financing transaction between the entity and the transfer recipient at the inception of the binding arrangement. That rate would reflect the credit characteristics of the transfer recipient, as well as any collateral or security provided by the transfer recipient. After the inception of the binding arrangement, an entity shall not update the discount rate for changes in interest rates or other circumstances.

113.111. An entity shall present the effects of financing (interest expense) separately from transfer expenses without performance obligations in the statement of financial performance. Interest expense is recognized only to the extent that a liability is recognized in accounting for a transfer expense without performance obligations.

114.112. As a practical expedient, an entity need not adjust the expense and liability for the effects of the time value of money if the entity expects, at the inception of the binding arrangement, that the period between when the entity recognizes a liability and when the entity transfers the resources to settle that liability will be one year or less.

Non-Cash Transfers

115.113. Where the resources transferred are non-cash assets, an entity (a transfer provider) does not revalue the assets prior to derecognizing those assets.

Debt Forgiveness

116.114. Where an entity (a transfer provider) forgives debt of a transfer recipient, the expense is measured at the carrying amount of the debt forgiven, in accordance with IPSAS 41.

Subsequent Measurement

115. Where the liability for a transfer expense without performance obligations is a financial liability as defined in IPSAS 41, an entity (the transfer provider) shall account for the liability in accordance with IPSAS 41.

116. Where the liability for a transfer expense without performance obligations is not a financial liability as defined in IPSAS 41, the liability shall be reduced as the entity (the transfer provider) transfers resources to the transfer recipient. Any difference between the carrying amount of the resources transferred and the carrying amount of that liability, in respect of the transfer expense without performance obligations is recognized in surplus or deficit in the period in which the liability is settled.
Where a liability is discounted in accordance with paragraph 109, the liability is increased and interest expense recognized in each reporting period until the liability is settled, to reflect the unwinding of the discount.

Where a liability has yet to be settled, the liability shall be reviewed at each reporting date, and adjusted to reflect the current best estimate of the costs that the entity (the transfer provider) will incur in settling the liability.

Subsequent Measurement of Other Statutory Payables

Where an entity has recognized a payable arising out of the operation of legislation or regulation that does not meet the definition of a transfer expense in paragraph 6, an entity applies the principles in paragraphs 116–118 to the measurement of that payable after initial recognition, except where the payable is within the scope of another Standard, in which case the entity shall apply the measurement requirements in that Standard.

Presentation

Transfer Expenses with Performance Obligations

When either party to a binding arrangement has performed, an entity shall present the binding arrangement in the statement of financial position as a transfer provider's binding arrangement asset or a transfer provider's binding arrangement liability, depending on the relationship between the transfer recipient’s performance and the entity’s (the transfer provider’s) payment. An entity shall present any unconditional obligations to pay consideration separately as a payable.

If an entity (the transfer provider) pays consideration, or has an obligation to pay an amount of consideration that is unconditional (i.e., a payable), before the transfer recipient transfers a good or service to the third-party beneficiary, the entity (the transfer provider) shall present the binding arrangement as a transfer provider’s binding arrangement asset when the payment is made or the payment is due (whichever is earlier). A transfer provider’s binding arrangement asset is an entity’s (a transfer provider’s) right to have the goods or services transferred to a third-party beneficiary for which the transfer recipient has received consideration (or an amount of consideration is due) from the entity (the transfer provider). An entity shall assess a transfer provider’s binding arrangement asset for impairment in accordance with IPSAS 21 Impairment of Non-Cash-Generating Assets.

If a transfer recipient performs by transferring goods or services to a third-party beneficiary before the entity (the transfer provider) pays consideration or before payment is due, the entity (the transfer provider) shall present the binding arrangement as a transfer provider’s binding arrangement liability, excluding any amounts presented as a payable. A transfer provider’s binding arrangement liability is an entity’s (a transfer provider’s) obligation to pay consideration in exchange for goods or services that the transfer recipient has transferred to a third-party beneficiary.

A payable is an entity’s (a transfer provider’s) obligation to pay consideration that is unconditional. An obligation to pay consideration is unconditional if only the passage of time is required before payment of that consideration is due. For example, an entity (a transfer provider) would recognize a payable if it has a present obligation to make payment even though that amount may be subject to refund in the future. An entity shall account for a payable in accordance with IPSAS 41.
This [draft] Standard uses the terms ‘transfer provider’s binding arrangement asset’ and ‘transfer provider’s binding arrangement liability’ but does not prohibit an entity from using alternative descriptions in the statement of financial position for those items. If an entity uses an alternative description for a transfer provider’s binding arrangement liability, the entity shall provide sufficient information for a user of the financial statements to distinguish between payables and transfer provider’s binding arrangement liabilities.

Transfer Expenses without Performance Obligations

An entity shall present liabilities from transfer expenses without performance obligations separately from other liabilities, either in the statement of financial performance or in the notes. An entity shall identify payables separately from other liabilities arising from transfer expenses without performance obligations.

Disclosure

The objective of the disclosure requirements is for an entity (a transfer provider) to disclose sufficient information to enable users of financial statements to understand the nature, amount, timing and uncertainty of expenses and cash flows arising from transfer expenses. To achieve that objective, an entity shall disclose qualitative and quantitative information about all of the following:

(a) Expenses from transfer expenses (see paragraph 130);

(b) Binding arrangements for transfer expenses with performance obligations (see paragraphs 131–135);

(c) The significant judgments, and changes in the judgments, made in applying this [draft] Standard to those binding arrangements for transfer expenses with performance obligations (see paragraphs 136–139);

(d) Binding arrangements for transfer expenses without performance obligations (see paragraph 140); and

(e) The significant judgments, and changes in the judgments, made in applying this [draft] Standard to those binding arrangements for transfer expenses without performance obligations (see paragraph 142).

An entity shall consider the level of detail necessary to satisfy the disclosure objective and how much emphasis to place on each of the various requirements. An entity shall aggregate or disaggregate disclosures so that useful information is not obscured by either the inclusion of a large amount of insignificant detail or the aggregation of items that have substantially different characteristics.

An entity need not disclose information in accordance with this [draft] Standard if it has provided the information in accordance with another Standard.

In making the disclosures required by this [draft] Standard, an entity shall consider the requirements of paragraphs 45 to 47 of IPSAS 1 which provide guidance on materiality and aggregation. A specific disclosure requirement in this [draft] Standard need not be satisfied if the information is not material.
Transfer Expenses

An entity shall disclose all of the following amounts for the reporting period, unless those amounts are presented in the statement of financial performance separately from its other expenses:

(a) Expenses recognized from binding arrangements for transfer expenses with performance obligations by major classes;

(b) Expenses recognized from binding arrangements for transfer expenses without performance obligations by major classes; and

(c) Expenses recognized from transfer expenses without binding arrangements by major classes.

Transfer Expenses with Performance Obligations

An entity shall disclose any impairment losses recognized in accordance with IPSAS 21 on any transfer provider’s binding arrangement assets (i.e., rights to have goods or services transferred to a third-party beneficiary), which the entity shall disclose separately from other impairment losses from other binding arrangements.

Transfer Recipient’s Performance Obligations

An entity (a transfer provider) shall disclose information about the transfer recipient’s performance obligations in its binding arrangements for transfer expenses with performance obligations, including a description of all of the following:

(a) The significant payment terms (for example, when payment is typically due, whether the binding arrangement has a significant financing component, whether the consideration amount is variable and whether the estimate of variable consideration is typically constrained in accordance with paragraphs 55–57); and

(b) The nature of the goods or services that have been or will be transferred to the third-party beneficiary.

Transaction Consideration Allocated to the Transfer Recipient’s Remaining Performance Obligations

An entity (a transfer provider) shall disclose the following information about a transfer recipient’s remaining performance obligations:

(a) The aggregate amount of the transaction consideration allocated to the transfer recipient’s performance obligations that are unsatisfied (or partially unsatisfied) as of the end of the reporting period; and

(b) An explanation of when the entity expects to recognize as an expense the amount disclosed in accordance with paragraph 133(a), which the entity shall disclose in either of the following ways:

(i) On a quantitative basis using the time bands that would be most appropriate for the duration of the resource recipient’s remaining performance obligations; or

(ii) By using qualitative information.

As a practical expedient, an entity (a transfer provider) need not disclose the information in paragraph 133 for a transfer recipient’s performance obligation if the transfer recipient’s performance obligation is part of a binding arrangement that has an original expected duration of one year or less.
An entity (a transfer provider) shall explain qualitatively whether it is applying the practical expedient in paragraph 134 and whether any consideration from binding arrangements for transfer expenses with performance obligations is not included in the transaction consideration and, therefore, not included in the information disclosed in accordance with paragraph 133. For example, an estimate of the transaction consideration would not include any estimated amounts of variable consideration that are constrained (see paragraphs 55–57).

**Significant Judgments in the Application of this [draft] Standard to Binding Arrangements for Transfer Expenses with Performance Obligations**

An entity (a transfer provider) shall disclose the judgments, and changes in the judgments, made in applying this [draft] Standard that significantly affect the determination of the amount and timing of expenses from binding arrangements for transfer expenses with performance obligations. In particular, an entity shall explain the judgments, and changes in the judgments, used in determining both of the following:

(a) The timing of satisfaction of performance obligations by the transfer recipient (see paragraphs 137–138); and

(b) The transaction consideration and the amounts allocated to the transfer recipient’s performance obligations (see paragraph 139).

**Determining the Timing of Satisfaction of Performance Obligations by the Transfer Recipient**

For performance obligations that a transfer recipient satisfies over time, an entity (a transfer provider) shall disclose both of the following:

(a) The methods used to recognize an expense (for example, a description of the output methods or input methods used and how those methods are applied); and

(b) An explanation of why the methods used provide a faithful depiction of the transfer of goods or services by the transfer recipient to third-party beneficiaries.

For performance obligations satisfied at a point in time, an entity (a transfer provider) shall disclose the significant judgments made in evaluating when a third-party beneficiary obtains control of promised goods or services.

**Determining the Transaction Consideration and the Amounts Allocated to the Transfer Recipient’s Performance Obligations**

An entity (a transfer provider) shall disclose information about the methods, inputs and assumptions used for all of the following:

(a) Determining the transaction consideration, which includes, but is not limited to, estimating variable consideration, adjusting the consideration for the effects of the time value of money and measuring non-cash consideration;

(b) Assessing whether an estimate of variable consideration is constrained; and

(c) Allocating the transaction consideration, including estimating stand-alone purchase prices of promised goods or services and allocating discounts and variable consideration to a specific part of the binding arrangement (if applicable).
Transfer Expenses without Performance Obligations

An entity shall disclose all of the following:

(a) A reconciliation of the opening and closing balances of liabilities from binding arrangements for transfer expenses without performance obligations, if not otherwise separately presented or disclosed;

(b) Where a transfer of resources is conditional on a transfer recipient undertaking specified activities, a description of those activities undertaken or to be undertaken;

(c) The amount of any liabilities forgiven by the transfer provider;

(d) Where an entity cannot reliably measure a liability for a transfer expense without performance obligations, an explanation of the nature of the transfer expense and why a reliable measure is not possible; and

(e) The accounting policies adopted for the recognition of transfer expenses without performance obligations.

Where an entity (a transfer provider) has agreed to provide a transfer of resources subject to appropriations being approved, and has not recognized a liability or expense as the appropriation has not yet been approved, the entity (the transfer provider) shall consider whether to disclose a contingent liability by applying the requirements of IPSAS 19.

Significant Judgments in the Application of this [draft] Standard to Binding Arrangements for Transfer Expenses without Performance Obligations.

An entity shall disclose the judgments, and changes in the judgments, made in applying this [draft] Standard that significantly affect the determination of the amount and timing of expenses from binding arrangements for transfer expenses without performance obligations. In particular, an entity shall explain the judgments, and changes in the judgments, used in determining both of the following:

(a) The determination of whether a promised transfer meets the criteria to be a present obligation; and

(b) The estimation of liabilities that include variable costs.

Practical Expedients

If an entity elects to use the practical expedient about the existence of a significant financing component in paragraph 62 (transfer expenses with performance obligations) or paragraph 113 (transfer expenses without performance obligations) the entity shall disclose that fact.

Effective Date and Transition

Effective Date

An entity shall apply this [draft] Standard for annual financial statements covering periods beginning on or after January 1, [Year]. Earlier adoption is encouraged. If an entity applies this [draft] Standard for a period beginning before January 1, [Year], it shall disclose that fact and shall apply [draft] IPSAS [X] (ED 70) and [draft] IPSAS [X] (ED 71) at the same time.
When an entity adopts the accrual basis IPSAS of accounting as defined in IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards (IPSASs)* for financial reporting purposes subsequent to this effective date, this [draft] Standard applies to the entity’s annual financial statements covering periods beginning on or after the date of adoption of IPSAS.

**Transition**

For the purposes of the transition requirements in paragraphs 147–153:

(a) The date of initial application is the start of the reporting period in which an entity first applies this [draft] Standard; and

(b) A completed binding arrangement for transfer expenses with performance obligations is a binding arrangement for which the third-party beneficiary has received all of the goods or services specified in the binding arrangement.

**Transfer Expenses with Performance Obligations**

An entity shall apply this [draft] Standard to binding arrangements for transfer expenses with performance obligations using one of the following two methods:

(a) Retrospectively to each prior reporting period presented in accordance with IPSAS 3, subject to the expedients in paragraph 149; or

(b) Retrospectively with the cumulative effect of initially applying this [draft] Standard recognized at the date of initial application in accordance with paragraphs 151–153.

Notwithstanding the requirements of paragraph 33 of IPSAS 3, when this [draft] Standard is first applied to binding arrangements for transfer expenses with performance obligations, an entity need only present the quantitative information required by paragraph 33(f) of IPSAS 3 for the annual period immediately preceding the first annual period for which this [draft] Standard is applied (the ‘immediately preceding period’) and only if the entity applies this [draft] Standard retrospectively in accordance with paragraph 147(a). An entity may also present this information for the current period or for earlier comparative periods, but is not required to do so.

An entity may use one or more of the following practical expedients when applying this [draft] Standard retrospectively to binding arrangements for transfer expenses with performance obligations, in accordance with paragraph 147(a):

(a) For completed binding arrangements for transfer expenses with performance obligations, an entity need not restate binding arrangements that:

(i) Begin and end within the same annual reporting period; or

(ii) Are completed at the beginning of the earliest period presented.

(b) For completed binding arrangements for transfer expenses with performance obligations that have variable consideration, an entity may use the transaction consideration at the date the binding arrangement was completed rather than estimating variable consideration amounts in the comparative reporting periods.
(c) For binding arrangements for transfer expenses with performance obligations that were modified before the beginning of the earliest period presented, an entity need not retrospectively restate the binding arrangement for those modifications to a binding arrangement in accordance with paragraphs 21–22. Instead, an entity shall reflect the aggregate effect of all of the modifications that occur before the beginning of the earliest period presented when:

(i) Identifying the transfer recipient’s satisfied and unsatisfied performance obligations;
(ii) Determining the transaction consideration; and
(iii) Allocating the transaction consideration to the transfer recipient’s satisfied and unsatisfied performance obligations.

(d) For all reporting periods presented before the date of initial application, an entity need not disclose the amount of the transaction consideration allocated to the transfer recipient’s remaining performance obligations and an explanation of when the entity expects to recognize that amount as an expense (see paragraph 133).

151.150. For any of the practical expedients in paragraph 149 that an entity uses, the entity shall apply that expedient consistently to all binding arrangements for transfer expenses with performance obligations within all reporting periods presented. In addition, the entity shall disclose all of the following information:

(a) The expedients that have been used; and
(b) To the extent reasonably possible, a qualitative assessment of the estimated effect of applying each of those expedients.

152.151. If an entity elects to apply this [draft] Standard retrospectively in accordance with paragraph 147(b), the entity shall recognize the cumulative effect of initially applying this [draft] Standard as an adjustment to the opening balance of accumulated surplus or deficit (or other component of net assets/equity, as appropriate) of the annual reporting period that includes the date of initial application. Under this transition method, an entity may elect to apply this [draft] Standard retrospectively only to binding arrangements for transfer expenses with performance obligations that are not completed binding arrangements for transfer expenses with performance obligations at the date of initial application (for example, January , [Year] for an entity with a December 31 year-end).

153.152. An entity applying this [draft] Standard retrospectively in accordance with paragraph 147(b) may also use the practical expedient described in paragraph 149(c), either:

(a) For all modifications to a binding arrangement for transfer expenses with performance obligations that occur before the beginning of the earliest period presented; or
(b) For all modifications to a binding arrangement for transfer expenses with performance obligations that occur before the date of initial application. If an entity uses this practical expedient, the entity shall apply the expedient consistently to all binding arrangements for transfer expenses with performance obligations and disclose the information required by paragraph 150.
For reporting periods that include the date of initial application, an entity shall provide both of the following additional disclosures if this [draft] Standard is applied retrospectively in accordance with paragraph 147(b):

(a) The amount by which each financial statement line item is affected in the current reporting period by the application of this [draft] Standard as compared to the entity’s previous accounting policies; and

(b) An explanation of the reasons for significant changes identified.

Transfer Expenses without Performance Obligations

An entity shall apply this [draft] Standard to transfer expenses without performance obligations retrospectively, with the cumulative effect of initially applying this [draft] Standard recognized at the date of initial application.

An entity shall recognize the cumulative effect of initially applying this [draft] Standard as an adjustment to the opening balance of accumulated surplus or deficit, or other component of net assets/equity, as appropriate, of the annual reporting period that includes the date of initial application. An entity may elect to apply this [draft] Standard retrospectively only to binding arrangements where one or both parties have yet to perform all their obligations at the date of initial application (for example, January 1, [Year] for an entity with a December 31 year-end).

For reporting periods that include the date of initial application, an entity shall provide both of the following additional disclosures:

(a) The amount by which each financial statement line item is affected in the current reporting period by the application of this [draft] Standard as compared to the entity’s previous accounting policies; and

(b) An explanation of the reasons for significant changes identified.
Application Guidance

This Appendix is an integral part of [draft] IPSAS [X] (ED xx)

AG1. This application guidance is organized into the following categories:

(a) Objective (paragraphs AG2–AG4);
(b) Scope (paragraphs AG5–AG6);
(c) Definitions (paragraphs AG7–AG9);
(d) Public Sector Performance Obligation Approach:
   (i) Recognition (paragraphs AG26–AG1);
   (ii) Measurement (paragraphs AG52–AG88; and
(e) Transfer Expenses without Performance Obligations:
   (i) Recognition (paragraphs AG90–AG100;
   (ii) Measurement (paragraphs AG110–AG114.

Objective (see paragraph 1)

AG2. To meet the objective in paragraph 1, the core principle of this [draft] Standard is that an entity shall recognize expenses as follows:

(a) For transfer expenses where the transfer recipient is required to satisfy performance obligations by transferring goods or services to a third-party beneficiary, to depict the transfer of resources in an amount that reflects the consideration which the entity expects to be obligated to pay in exchange for those goods or services; and
(b) For transfer expenses where the transfer recipient is not required to satisfy performance obligations, at the earlier of the date at which the entity has a present obligation to transfer resources to a transfer recipient, and the date when the entity ceases to control the resources (i.e., when it transfers those resources to the beneficiary or resource transfer recipient).

AG3. An entity shall consider the terms of the transfer, and all relevant facts and circumstances, when applying this [draft] Standard. An entity shall apply this [draft] Standard, including the use of any practical expedients, consistently to transfers with similar characteristics and in similar circumstances.

AG4. This [draft] Standard specifies the accounting for an individual transfer. However, as a practical expedient, an entity may apply this [draft] Standard to a portfolio of transfers with similar characteristics if the entity reasonably expects that the effects on the financial statements of applying this [draft] Standard to the portfolio would not differ materially from applying this [draft] Standard to the individual transfers within that portfolio. Transfers with performance obligations and transfers without performance obligations do not have similar characteristics and are not accounted
for in the same portfolio. When accounting for a portfolio, an entity shall use estimates and assumptions that reflect the size and composition of the portfolio.

Scope (see paragraphs 2–4)

AG5. The scope of this [draft] Standard is focused on establishing principles and requirements when accounting for transfer expenses, where an entity provides a good, service, or asset to another entity without receiving any good, service, or asset in return. The definitions of “binding arrangement”, “performance obligation”, “third-party beneficiary”, “transfer expense”, “transfer provider” and “transfer recipient” in paragraph 6, or in other Standards as explained in paragraph 7, establish the key elements in applying the scope of the [draft] Standard.

AG6. This [draft] Standard does not address transactions where an entity receives any good, service or asset in return for the good, service or asset that it transfers to another party. Such transactions are accounted for in accordance with other Standards.

Definitions (see paragraphs 6–7)

Transfer Expense

AG7. This [draft] Standard defines a transfer expense as a transaction in which an entity (the transfer provider) provides a good, service, or asset to another entity (the transfer recipient, which may be a public sector entity, a not-for-profit organization, an individual or another entity) without receiving any good, service, or asset in return. For the purposes of determining whether the transfer provider has received a good, service or another asset, a transfer provider’s binding arrangement asset is not considered to be another asset received by the transfer provider. This is because a transfer provider’s binding arrangement asset is the right to have a good, service or asset transferred to a third-party beneficiary. This is a temporary asset that will be derecognized as the transfer recipient fulfills its performance obligations.

AG8. In a transfer expense, the transfer provider provides does not receive any goods, services or other assets to a transfer recipient in return. Consequently, the transfer provider controls the goods, services or other assets prior to the transfer and is therefore acting as an agent/principal. The accounting for a transfer expense by a transfer provider is the same whether the transfer provider transacts directly with the transfer recipient, or through an agent. Paragraph AG23 explains that a transfer recipient in a three-party transaction is not an agent, because they gain control of the goods, services or other asset transferred by the transfer provider's arrangements and arrangements where the transfer provider gains control of the transfer recipient's output are outside the scope of this [draft] Standard, as in these transactions the transfer provider receives goods, services or assets.

Transfer Recipient

AG9. A transfer recipient is defined in [draft] IPSAS [X] (ED 71), Revenue without Performance Obligations. A transfer recipient is an entity (which may be a public sector entity, a not-for-profit organization, an individual or another entity) that receives a good, service, or asset from another entity (the transfer provider) without providing any good, service, or asset to that entity. While the transfer recipient does not provide any good, service or other asset to the transfer provider, it may provide a good, service or asset to a third-party beneficiary in accordance with a binding arrangement between the transfer recipient and the transfer provider.
**Binding Arrangement**

AG10. A binding arrangement is defined in [draft] IPSAS [X] (ED 70), *Revenue with Performance Obligations*. The [draft] Standard relies on the definition of a binding arrangement, being an arrangement that confers enforceable rights and obligations on all the parties to the arrangement. In the public sector an arrangement is enforceable when the entity (the transfer provider) and the transfer recipient are able to enforce the rights and obligations through legal or equivalent means.

AG11. There are jurisdictions where public sector entities cannot enter into legal obligations, because they are not permitted to contract in their own name, but where there are alternative processes with equivalent effect to legal arrangements (described as equivalent means).

AG12. For an arrangement to be enforceable through ‘equivalent means’, the presence of a mechanism outside the legal systems that establishes the right of the entity (the transfer provider) to oblige the transfer recipient to satisfy the agreed obligations or be subject to consequences is required. Similarly, the presence of a mechanism outside the legal systems that establishes the right of the transfer recipient to oblige the entity (the transfer provider) to pay the agreed consideration is required.

AG13. An entity considers the substance rather than the legal form of an arrangement in determining whether it is enforceable. An arrangement is enforceable by another party through legal or equivalent means if the agreement includes:

(a) Distinct rights and obligations for both the entity (the transfer provider) and the transfer recipient; and

(b) Remedies for non-performance by the either party which can be enforced by the other party through legal or equivalent means.

AG14. Binding arrangements can be evidenced in several ways. A binding arrangement is often, but not always, in writing, in the form of a contract or documented discussions between the parties. The binding arrangement may arise from legal contracts or through other equivalent means such as statutory mechanisms (for example, through legislative or executive authority). Legislative or executive authority can create enforceable arrangements, similar to contractual arrangements, either on their own or in conjunction with legal contracts between the parties.

AG15. To be considered a binding arrangement for the purposes of this [draft] Standard, the rights and obligations in these arrangements must be enforceable by legal or equivalent means (discussed further in paragraphs AG16–AG24).

**Enforceability**

AG16. A key characteristic of a binding arrangement is the ability of both parties to enforce the rights and obligations of the arrangement. That is, the entity receiving the consideration (the transfer recipient) must be able to enforce the promise to receive funding (consideration). Similarly, the entity providing the funding (the transfer provider) must be able to enforce fulfillment of the obligations assumed by the entity receiving the consideration (the transfer recipient).

AG17. Legal enforceability arises from the compulsion by a legal system, comprising the courts in a jurisdiction, to comply with the terms of the binding arrangement. Compliance with a binding arrangement is determined based on the principles set out in the laws of a jurisdiction, which
includes legislation, executive authority or ministerial directives, as well as judicial rulings and case law precedence.

AG18. Executive authority (sometimes called an executive order) is an authority given to a member or selected members of a government administration to create legislation without ratification by the full parliament. This may be considered a valid enforcement mechanism if such an order was issued directing a transfer recipient to transfer the promised goods or services to a third-party beneficiary, or directing an entity (a transfer provider) to transfer the promised consideration.

AG19. Legislative authority (sometimes called sovereign rights) is an authority to make, amend and repeal legal provisions. On its own, this authority does not establish enforceable rights and obligations for the purposes of applying this [draft] Standard. However, if the use of legislative authority were detailed in the binding arrangement as a means of enforcing the satisfaction of performance obligations by an entity this may result in a legislative enforcement mechanism.

AG20. Other forms of enforceability by ‘equivalent means’ may also exist in the public sector and may be jurisdictionally specific. Cabinet and ministerial directives may create an enforcement mechanism between different government departments or different levels of government of the same government structure. For example, a directive given by a minister or government department to a transfer recipient controlled by the government to transfer goods or services to third-party beneficiaries may be enforceable. Similarly, a directive given by a minister or government department to an entity (a transfer provider) controlled by the government to transfer the promised consideration may be enforceable. The key determining factor is that each party must be able to enforce the promises made in the binding arrangement. Each party must have the ability and authority to compel the other party to fulfil the promises established within the arrangement or to seek redress should these promises not be fulfilled.

AG21. A transfer recipient may feel compelled to deliver on the obligations in a binding arrangement because of the risk that it might not receive future funding from the other entity (the transfer provider). In general, the entity’s (the transfer provider’s) ability to reduce or withhold future funding to which the transfer recipient is not presently entitled would not be considered a valid enforcement mechanism in the context of this [draft] Standard because there is no present obligation on the entity (the transfer provider) to provide such funding. However, if the transfer recipient was presently entitled to funding in the future (through another binding arrangement) then this could be considered a valid enforcement mechanism.

AG22. When determining if a reduction of future funding would be an enforcement mechanism, the entity (the transfer provider) shall apply a judgment based on the facts and circumstances.

AG23. For the purposes of this [draft] Standard, transfer expenses with performance obligations involve three-party arrangements—transfer provider (the reporting entity in this [draft] Standard), transfer recipient and third-party beneficiaries. It is important to recognize that in these three-party arrangements the third-party beneficiaries do not have any rights to force the transfer recipient to deliver goods and services because they are not a party to the binding arrangement. However, for these three-party arrangements to be classified as transfer expenses with performance obligations, the entity (the transfer provider) must have the ability to force the transfer recipient to deliver goods and services to third-party beneficiaries. In these three-party arrangements the transfer recipient is not an agent of the entity (the transfer provider).
because the transfer recipient gains control of the consideration from the entity (the transfer provider) and is responsible for providing goods or services to the third-party beneficiaries.

AG24. A statement of intent or public announcement by an entity (a transfer provider) such as a government promise to spend money or deliver goods and services in a certain way is not, in and of itself, an enforceable arrangement for the purposes of this [draft] Standard. Such a declaration is general in nature and does not create a binding arrangement between an entity (a transfer provider) and a transfer recipient under which both parties have rights and obligations. An entity considers whether such a public announcement gives rise to a constructive obligation in accordance with IPSAS 19, Provisions, Contingent Liabilities and Contingent Assets.

Public Sector Performance Obligation Approach (see paragraphs 9–88)

AG25. Transfer expenses with performance obligations always require the transfer recipient to transfer goods, services or other assets to a third-party beneficiary. This is as a consequence of the interaction of the definition of a performance obligation in [draft] IPSAS [X] (ED 70), which requires the transfer of goods, services or other assets by the transfer recipient, and the scope of this [draft] Standard, which excludes transactions where the transfer recipient would transfer those goods, services or other assets to the transfer provider in return for consideration.

AG25.AG26. The public sector performance obligation approach used in this [draft] Standard applies the principles in [draft] IPSAS X (ED 70) to transfer expenses with performance obligations. The guidance in this [draft] Standard has been developed taking into account the information that is expected to be available to a transfer provider. An example of the information that a transfer provider is not expected to have access to is the number of billable hours a transfer recipient has undertaken but not yet invoiced the transfer provider’s inputs to permit the use of an input method in measuring progress towards complete satisfaction of a performance obligation. However, where a transfer provider has access to such additional information, it may apply the guidance in [draft] IPSAS X (ED 70) for which there is no equivalent guidance in this [draft] Standard in accounting for transfer expenses with performance obligations, provided such guidance does not conflict with the requirements of this [draft] Standard and that the entity makes any related disclosure required by [draft] IPSAS [X] (ED 70).

Recognition (see paragraphs 10–45)

Identifying the Binding Arrangement (Step 1) (see paragraphs 10–22)

AG26.AG27. The criteria an entity considers in determining when to account for a transfer expense with performance obligations are similar to those an entity would consider in determining when to account for revenue in accordance with [draft] IPSAS [X] (ED 70). However, in determining when to account for a transfer expense with performance obligations, an entity does not need to consider whether the binding arrangement has economic substance. A transfer expense is the transfer of a good, service or other asset without receiving a good, service or asset in return, and consequently all transfer expenses have economic substance.

Identifying Performance Obligations (Step 2) (see paragraphs 23–31)

AG27.AG28. This [draft] Standard requires transfer expenses with performance obligations to be recognized as or when a performance obligation is fulfilled by a transfer recipient.
Paragraph 23 requires an entity (the transfer provider) to identify any performance obligations when a binding arrangement is entered into (Step 2 of the recognition model). A performance obligation is a promise by the transfer recipient in a binding arrangement with a transfer provider to transfer to third-party beneficiaries either:

(a) A good or service (or a bundle of goods or services) that is distinct; or
(b) A series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the purchaser.

The key features of this definition of a performance obligation are that goods and services must be distinct and there must be a transfer of these goods and services to a third-party beneficiary. If goods or services (or a bundle of goods or services) are not transferred and/or are not distinct, the transaction is not a transfer expense with performance obligations, and is accounted for as a transfer expense without performance obligations (see paragraphs 89–119).

In the public sector, identifying performance obligations may require significant judgment. A necessary condition for identifying a performance obligation is that the promise must be distinct to be able to determine when that performance obligation is fulfilled by the transfer recipient. In identifying performance obligations which are distinct an entity considers the following factors:

(a) The nature or type of the goods or services;
(b) The cost or value of the goods or services;
(c) The quantity of the goods or services; and
(d) The period over which the goods or services must be transferred.

The existence of performance indicators in relation to the delivery of goods and services does not necessarily indicate the existence of a performance obligation as defined in [draft] IPSAS [X] (ED 70). A performance obligation is a promise by a transfer recipient within a binding arrangement to transfer goods or services or a bundle of goods or services to a third-party beneficiary based on the terms and conditions agreed between two parties (the transfer provider and the transfer recipient).

A performance indicator is a type of performance measurement (either quantitative, qualitative or descriptive) used to evaluate the success and extent to which an entity is using resources, providing services and achieving its service performance objectives. A performance indicator does not typically specify the goods or services to be transferred and is often an internally imposed indicator of performance and therefore not a performance obligation.

Distinct Goods and Services

A good or service promised by a transfer recipient in a binding arrangement is distinct if the following two criteria are both met (see paragraph 28):

(a) The third-party beneficiary can derive the economic benefit or service potential from the good or service either on its own or together with other resources that are readily available to the third-party beneficiary (i.e., the good or service is capable of being distinct); and
(b) The entity’s promise to transfer the good or service to the third-party beneficiary is separately identifiable from other promises in the binding arrangement (i.e., the promise to transfer the good or service is distinct within the context of the binding arrangement).

AG34.AG35. When identifying a performance obligation, not only does the promised transfer of the goods and services by the transfer recipient in a promise need to be separately identifiable, but the promises in a binding arrangement must also be distinct from other promises in the same binding arrangement, to allow for the transfer provider to be able to determine when that performance obligation is fulfilled. Therefore, it is possible to have several performance obligations in one binding arrangement.

Transfer of Goods and Services

AG35.AG36. The second requirement of a performance obligation is that there must be a transfer of goods and services to the third-party beneficiary. If there is no requirement to transfer control of goods or services, the transaction is not a transfer expense with performance obligations, and is accounted for as a transfer expense without performance obligations (see paragraphs 89–119).

AG36.AG37. This [draft] Standard requires that transfer expenses are recognized when a transfer recipient satisfies a performance obligation by transferring a promised good or service to a third-party beneficiary. The transfer of the good or service is indicated when the third-party beneficiary gains control of the promised goods or services. A transfer provider can receive the economic benefits or service potential from the good or service transferred to a third-party beneficiary where the transfer of the good or service to the third-party beneficiary contributes to the transfer provider achieving its service objectives.

AG37.AG38. Paragraph 34 provides indicators of control which include:

(a) The ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset; and

(b) The ability to prevent others from directing the economic benefits or service potential embodied in the asset.

Step 5: Satisfaction of Performance Obligations (see paragraphs 32–45)

Performance Obligations Satisfied Over Time (see paragraph 35)

AG38.AG39. Paragraph 35 provides that a performance obligation is satisfied over time if one of the following criteria is met:

(a) The third-party beneficiary simultaneously receives and consumes the economic benefits or service potential provided by the transfer recipient’s performance as the transfer recipient performs (see paragraphs AG39–AG40);

(b) The transfer recipient’s performance creates or enhances an asset (for example, work in progress) that a third-party beneficiary controls as the asset is created or enhanced (see paragraph AG41); or

(c) The entity’s performance does not create an asset with an alternative use to the entity (see paragraphs AG42–AG44) and the entity has an enforceable right to payment for performance completed to date (see paragraphs AG1–AG48).
Simultaneous Receipt and Consumption of the Economic Benefits or Service Potential of the Entity’s Performance (see paragraph 35(a))

AG39.AG40. For some types of performance obligations, the assessment of whether a third-party beneficiary receives the economic benefit or service potential of a transfer recipient’s performance as the transfer recipient performs, and the third-party beneficiary simultaneously consumes those economic benefits or service potential as they are received will be straightforward. Examples include routine or recurring services (such as a cleaning service) in which the receipt and simultaneous consumption by the third-party beneficiary of the economic benefits or service potential of the transfer recipient’s performance can be readily identified.

AG40.AG41. For other types of performance obligations, an entity may not be able to readily identify whether a third-party beneficiary simultaneously receives and consumes the economic benefits or service potential from the transfer recipient’s performance as the transfer recipient performs. In those circumstances, a performance obligation is satisfied over time if an entity determines that another entity (i.e., another supplier) would not need to substantially re-perform the work that the transfer recipient has completed to date if that other entity were to fulfill the remaining performance obligation to the transfer provider. In determining whether another entity would not need to substantially re-perform the work the entity has completed to date, an entity shall make both of the following assumptions:

(a) Disregard potential restrictions or practical limitations in the binding arrangement that otherwise would prevent the transfer recipient from transferring the remaining performance obligation to another entity; and

(b) Presume that another entity fulfilling the remainder of the performance obligation would not have the economic benefit or service potential of any asset that is presently controlled by the transfer recipient and that would remain controlled by the transfer recipient if the performance obligation were to transfer to another entity.

Third-Party Beneficiary Controls the Asset as it is Created or Enhanced

AG41.AG42. In determining whether a third-party beneficiary controls an asset as it is created or enhanced by the transfer recipient in accordance with paragraph 35(b), an entity shall apply the requirements for control in paragraphs 32–34 and 38. The asset that is being created or enhanced (for example, a work-in-progress asset) could be either tangible or intangible.

Transfer Recipient’s Performance does not Create an Asset with an Alternative Use (see paragraph 35(c))

AG42.AG43. In assessing whether an asset has an alternative use to a transfer recipient in accordance with paragraphs 35(c) and 36, an entity shall consider the effects of restrictions and practical limitations in the binding arrangement on the transfer recipient’s ability to readily direct that asset for another use, such as providing it to a different purchaser. The possibility of the binding arrangement with the entity (the transfer provider) being terminated is not a relevant consideration in assessing whether the transfer recipient would be able to readily direct the asset for another use.

AG43.AG44. A restriction in the binding arrangement on a transfer recipient’s ability to direct an asset for another use must be substantive for the asset not to have an alternative use to the transfer recipient. A restriction in the binding arrangement is substantive if the entity (the transfer provider)
could enforce its rights to the promised asset if the transfer recipient sought to direct the asset for another use. In contrast, a restriction in the binding arrangement is not substantive if, for example, an asset is largely interchangeable with other assets that the transfer recipient could transfer to another purchaser without breaching the binding arrangement and without incurring significant costs that otherwise would not have been incurred in relation to that binding arrangement.

AG44.AG45. A practical limitation on a transfer recipient’s ability to direct an asset for another use exists if a transfer recipient would incur significant economic losses to direct the asset for another use. A significant economic loss could arise because the transfer recipient either would incur significant costs to rework the asset or would only be able to provide the asset at a significant loss. For example, a transfer recipient may be practically limited from redirecting assets that either have design specifications that are unique to a transfer provider or are located in remote areas.

Right to Payment for Performance Completed to Date (see paragraph 35(c))

AG45.AG46. A transfer recipient’s right to payment for performance completed to date need not be a present unconditional right to payment. In many cases, a transfer recipient will have an unconditional right to payment only at an agreed-upon milestone or upon complete satisfaction of the performance obligation. In assessing whether a transfer recipient has a right to payment for performance completed to date, an entity shall consider whether the transfer recipient would have an enforceable right to demand or retain payment for performance completed to date if the binding arrangement were to be terminated before completion for reasons other than the transfer recipient’s failure to perform as promised.

AG46.AG47. In some binding arrangements, an entity (a transfer provider) may have a right to terminate the binding arrangement only at specified times during the life of the binding arrangement or the entity might not have any right to terminate the binding arrangement. If an entity (a transfer provider) acts to terminate a binding arrangement without having the right to terminate the binding arrangement at that time (including when the entity (the transfer provider) fails to perform its obligations as promised), the binding arrangement (or other laws) might entitle the transfer recipient to continue to transfer to the third-party beneficiary the goods or services promised in the binding arrangement and require the entity (the transfer provider) to pay the consideration promised in exchange for those goods or services. In those circumstances, a transfer recipient has a right to payment for performance completed to date because the transfer recipient has a right to continue to perform its obligations in accordance with the binding arrangement and to require the entity (the transfer provider) to perform its obligations (which include paying the promised consideration).

AG47.AG48. In assessing the existence and enforceability of a right to payment for performance completed to date, an entity shall consider the terms of the binding arrangement as well as any legislation or legal precedent that could supplement or override those terms of the binding arrangement. This would include an assessment of whether:

(a) Legislation, administrative practice or legal precedent confers upon the entity a right to payment for performance to date even though that right is not specified in the binding arrangement with the purchaser;

(b) Relevant legal precedent indicates that similar rights to payment for performance completed to date in similar binding arrangements have no binding legal effect; or
An entity’s customary practices of choosing not to enforce a right to payment has resulted in the right being rendered unenforceable in that legal environment. However, notwithstanding that an entity may choose to waive its right to payment in similar binding arrangements, an entity would continue to have a right to payment to date if, in the binding arrangement with the purchaser, its right to payment for performance to date remains enforceable.

The payment schedule specified in a binding arrangement does not necessarily indicate whether a transfer recipient has an enforceable right to payment for performance completed to date. Although the payment schedule in a binding arrangement specifies the timing and amount of consideration that is payable by an entity (the transfer provider), the payment schedule might not necessarily provide evidence of the transfer recipient’s right to payment for performance completed to date. This is because, for example, the binding arrangement could specify that the consideration received from the entity (the transfer provider) is refundable for reasons other than the transfer recipient failing to perform as promised in the binding arrangement.

Methods for Measuring Progress towards Complete Satisfaction of a Performance Obligation (see paragraphs 35–37)

Methods that can be used to measure a transfer recipient’s progress towards complete satisfaction of a performance obligation satisfied over time include the following:

(a) Output methods (see paragraphs AG50–AG51); and

(b) Input methods.

Output Methods

Output methods recognize expenses on the basis of direct measurements of the value to the entity (the transfer provider) of the goods or services transferred to date relative to the remaining goods or services promised under the binding arrangement. Output methods include methods such as surveys of performance completed to date, appraisals of results achieved, milestones reached, time elapsed and units produced or units delivered. Output methods are generally appropriate for recognizing expenses. When an entity evaluates whether to apply an output method to measure a transfer recipient’s progress, the entity shall consider whether the output selected would faithfully depict the transfer recipient’s performance towards complete satisfaction of the performance obligation. An output method would not provide a faithful depiction of the transfer recipient’s performance if the output selected would fail to measure some of the goods or services for which control has transferred to the third-party beneficiary. For example, output methods based on units produced or units delivered would not faithfully depict a transfer recipient’s performance in satisfying a performance obligation if, at the end of the reporting period, the transfer recipient’s performance has produced work in progress or finished goods controlled by the third-party beneficiary that are not included in the measurement of the output.

The disadvantages of output methods are that the outputs used to measure progress may not be directly observable and the information required to apply them may not be available to an entity without undue cost.
Measurement (see paragraphs 46–84)

Step 3: Determining the Transaction Consideration (see paragraphs 47–70)

Determining the Transaction Consideration where Components of the Binding Arrangement do not Relate to the Transfer Recipient’s Performance Obligations

AG52.AG53. In the public sector, an entity (a transfer provider) may enter into a binding arrangement with a transfer recipient with a dual purpose of obtaining goods or services to be transferred to a third-party beneficiary and to help the entity (the transfer provider) achieve its objectives. An entity (a transfer provider) shall allocate the transaction consideration to each of the transfer recipient’s performance obligations in the binding arrangement so that the allocation depicts the amount of consideration to which the entity (the transfer provider) expects to be obligated to pay in exchange for the transfer recipient transferring the promised goods or services to the third-party beneficiary. This is based on the presumption that all of the consideration is wholly related to the transfer of goods or services to the third-party beneficiary (i.e., that all of the consideration is transaction consideration).

AG53.AG54. In the public sector, an entity (a transfer provider) may enter into a binding arrangement with a transfer recipient with a dual purpose of obtaining goods or services to be transferred to a third-party beneficiary and to help the entity (the transfer provider) achieve its objectives. Such transactions may rebut the presumption that the transaction consideration is wholly related to the transfer of goods or services, as a portion of the consideration relates to helping the entity achieve its objectives. To demonstrate that this presumption is rebutted, the terms of the binding arrangement must clearly specify that only a portion of the consideration is to be returned to the entity (the transfer provider) in the event the transfer recipient does not deliver the promised goods or services to the third-party beneficiary. Where the presumption is rebutted, the entity shall disaggregate the consideration and shall include the component that relates to the transfer of promised goods or services to the third-party beneficiary in the transition consideration in accordance with paragraphs 47–70. The remainder of the consideration (i.e., the amount that does not relates to the transfer of promised goods or services to the third-party beneficiary) shall be accounted for as a transfer expense without performance obligations in accordance with paragraphs 89–119. The existence of a component of the consideration that does not relates to the transfer of promised goods or services to the third-party beneficiary will often, but not always, be made explicit in the binding arrangement.

Step 4: Allocating the Transaction Consideration to Performance Obligations (see paragraphs 71–84)

Warranties

AG54.AG55. It is common for a transfer recipient to provide (in accordance with the binding arrangement, the law or the transfer recipient’s customary practices) a warranty in connection with the provision of a product (whether a good or service). The nature of a warranty can vary significantly across sectors and binding arrangements. Some warranties provide a transfer provider with assurance that the related product will function as the parties intended because it complies with agreed-upon specifications. Other warranties provide the third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications.
AG55.AG56. If a transfer provider has the option to purchase a warranty separately (for example, because the warranty is priced or negotiated separately), the warranty is a distinct service because the transfer recipient promises to provide the service to the third-party beneficiary in addition to the product that has the functionality described in the binding arrangement. In those circumstances, an entity (a transfer provider) shall account for the promised warranty as a transfer recipient’s performance obligation in accordance with paragraphs 23–31 and allocate a portion of the transaction consideration to that transfer recipient’s performance obligation in accordance with paragraphs 71–84.

AG56.AG57. In assessing whether a warranty provides a third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications, an entity (a transfer provider) shall consider factors such as:

(a) Whether the warranty is required by law—if the transfer recipient is required by law to provide a warranty, the existence of that law indicates that the promised warranty is not a transfer recipient’s performance obligation because such requirements typically exist to protect transfer providers and third-party beneficiaries from the risk of purchasing defective products.

(b) The length of the warranty coverage period—the longer the coverage period, the more likely it is that the promised warranty is a transfer recipient’s performance obligation because it is more likely to provide a service to the third-party beneficiary in addition to the assurance that the product complies with agreed-upon specifications.

(c) The nature of the tasks that the transfer recipient promises to perform—if it is necessary for a transfer recipient to perform specified tasks to provide the assurance that a product complies with agreed-upon specifications (for example, a return shipping service for a defective product), then those tasks likely do not give rise to a transfer recipient’s performance obligation.

AG57.AG58. If a warranty, or a part of a warranty, provides a third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications, the promised service is a transfer recipient’s performance obligation. Therefore, an entity (a transfer provider) shall allocate the transaction consideration to the product and the service. If a transfer provider is promised both an assurance-type warranty and a service-type warranty but cannot reasonably account for them separately, the entity (the transfer provider) shall account for both of the warranties together as a transfer recipient’s single performance obligation.

Options for Additional Goods or Services

AG58.AG59. Options for an entity (a transfer provider) to acquire additional goods or services for free or at a discount come in many forms, including sales incentives, award credits (or points), renewal options in a binding arrangement for transfer expenses with performance obligations or other discounts on future goods or services.

AG59.AG60. If, in a binding arrangement for transfer expenses with performance obligations, a transfer recipient grants an entity (a transfer provider) the option to purchase additional goods or services to be transferred to third-party beneficiaries, that option gives rise to a transfer recipient’s performance obligation in the binding arrangement only if the option provides a material right to the entity (the transfer provider) that it would not receive without entering into that binding arrangement (for example, a discount that is incremental to the range of discounts typically given for those goods
or services to that class of transfer provider in that geographical area or market). If the option provides a material right to the entity (the transfer provider), the entity in effect pays the transfer recipient in advance for future goods or services to be transferred to third-party beneficiaries and the entity (the transfer provider) recognizes an expense when those future goods or services are transferred or when the option expires.

If an entity (a transfer provider) has the option to acquire an additional good or service at a price that would reflect the stand-alone purchase price for that good or service, that option does not provide the entity (the transfer provider) with a material right even if the option can be exercised only by entering into a previous binding arrangement. In those cases, the entity (the transfer provider) shall recognize an expense for the additional goods or services in accordance with this [draft] Standard only when it exercises the option to purchase the additional goods or services.

Paragraph 72 requires an entity to allocate the transaction consideration to a transfer recipient’s performance obligations on a relative stand-alone purchase price basis. If the stand-alone purchase price for an entity’s (a transfer provider’s) option to purchase additional goods or services is not directly observable, an entity shall estimate it. That estimate shall reflect the discount that the entity (the transfer provider) would obtain when exercising the option, adjusted for both of the following:

(a) Any discount that the entity (the transfer provider) could receive without exercising the option; and
(b) The likelihood that the option will be exercised.

If an entity (a transfer provider) has a material right to purchase future goods or services and those goods or services are similar to the original goods or services in the binding arrangement and are provided in accordance with the terms of the original binding arrangement, then an entity may, as a practical alternative to estimating the stand-alone purchase price of the option, allocate the transaction consideration to the optional goods or services by reference to the goods or services expected to be provided and the corresponding expected consideration. Typically, those types of options are for renewals of a binding arrangement.

Purchasers' Unexercised Rights

In accordance with paragraph 121, where an entity (a transfer provider) makes a payment to a transfer recipient prior to the promised goods and services being transferred to the third-party beneficiary, the entity (the transfer provider) shall recognize a transfer provider’s binding arrangement asset in the amount of the prepayment for the transfer recipient’s performance obligation to transfer, or to stand ready to transfer, goods or services in the future. An entity (a transfer provider) shall derecognize that transfer provider’s binding arrangement asset (and recognize an expense) when the transfer recipient transfers those goods or services to the third-party beneficiary and, therefore, satisfies its performance obligation.

An entity’s (a transfer provider’s) non-refundable prepayment to a transfer recipient gives the entity (the transfer provider) a right to have a good or service transferred to a third-party beneficiary in the future (and obliges the transfer recipient to stand ready to transfer a good or service). However, an entity (a transfer provider) may not exercise all of its rights in the binding arrangement. Those unexercised rights are often referred to as breakage.
An entity (a transfer provider) shall not derecognize a transfer provider’s binding arrangement asset as a result of breakage until it is no longer entitled to exercise all of its rights. If an entity (a transfer provider) expects breakage to occur, it shall assess the transfer provider’s binding arrangement asset for impairment in accordance with IPSAS 21, *Impairment of Non-Cash-Generating Assets*.

Non-refundable Upfront Fees (and some Related Costs)

In some binding arrangements, a transfer recipient charges an entity (a transfer provider) a non-refundable upfront fee at or near the inception of the binding arrangement. Examples include activation fees from telecommunication companies, setup fees for some services and initial fees for some supplies.

To identify the transfer recipient’s performance obligations in such binding arrangements, an entity (a transfer provider) shall assess whether the fee relates to the transfer of a promised good or service to a third-party beneficiary. In many cases, even though a non-refundable upfront fee relates to an activity that the transfer recipient is required to undertake at or near the inception of the binding arrangement, to fulfill the binding arrangement that activity does not result in the transfer of a promised good or service to the third-party beneficiary (see paragraph 26). Instead, the upfront fee is an advance payment for future goods or services to be provided to third-party beneficiaries and, therefore, would be recognized as an expense when those future goods or services are provided to the third-party beneficiaries. The expense recognition period would extend beyond the initial period of the binding arrangement if the transfer recipient grants the entity (the transfer provider) the option to renew the binding arrangement and that option provides the entity (the transfer provider) with a material right as described in paragraph AG59.

If the non-refundable upfront fee relates to a good or service transferred to a third-party beneficiary, the entity (the transfer provider) shall evaluate whether to account for the good or service as a separate performance obligation in accordance with paragraphs 23–31.

Other Specific Application Issues

Licensing

A license establishes a third-party beneficiary’s rights to the intellectual property of a transfer recipient. Licenses of intellectual property may include, but are not limited to, licenses of any of the following:

(a) Software and technology;
(b) Motion pictures, music and other forms of media and entertainment;
(c) Franchises; and
(d) Patents, trademarks and copyrights.

In addition to a promise to grant a license (or licenses) to a third-party beneficiary, a transfer recipient may also promise to transfer other goods or services to the third-party beneficiary. Those promises may be explicitly stated in the binding arrangement or implied by a transfer recipient’s customary practices, published policies or specific statements (see paragraph 25). As with other types of binding arrangements, when a binding arrangement with a transfer recipient
includes a promise by the transfer recipient to grant a license (or licenses) in addition to other promised goods or services, an entity (the transfer provider) applies paragraphs 23–31 to identify each of the transfer recipient’s performance obligations in the binding arrangement.

AG71.AG72 If the transfer recipient’s promise to grant a license is not distinct from other promised goods or services in the binding arrangement in accordance with paragraphs 27–31, an entity (the transfer provider) shall account for the transfer recipient’s promise to grant a license to a third-party beneficiary and those other promised goods or services together as a single performance obligation. Examples of licenses that are not distinct from other goods or services promised in the binding arrangement include the following:

(a) A license that forms a component of a tangible good and that is integral to the functionality of the good; and

(b) A license that the third-party beneficiary can generate economic benefits or service potential from only in conjunction with a related service (such as an online service provided by the transfer recipient that enables, by granting a license, the third-party beneficiary to access content).

AG72.AG73 If the license is not distinct, an entity (the transfer provider) shall apply paragraphs 32–38 to determine whether the transfer recipient’s performance obligation (which includes the promised license) is a performance obligation that is satisfied over time or satisfied at a point in time.

AG73.AG74 If the promise to grant the license is distinct from the other promised goods or services in the binding arrangement and, therefore, the transfer recipient’s promise to grant the license is a separate performance obligation, an entity (the transfer provider) shall determine whether the license transfers to a third-party beneficiary either at a point in time or over time. In making this determination, an entity shall consider whether the nature of the transfer recipient’s promise in granting the license to a third-party beneficiary is to provide the third-party beneficiary with either:

(a) A right to access the transfer recipient’s intellectual property as it exists throughout the license period; or

(b) A right to use the transfer recipient’s intellectual property as it exists at the point in time at which the license is granted.

Determining the Nature of the Transfer Recipient’s Promise

AG74.AG75 The nature of a transfer recipient’s promise in granting a license is a promise to provide a right to access the transfer recipient’s intellectual property if all of the following criteria are met:

(a) The binding arrangement requires, or the entity (the transfer provider) reasonably expects, that the entity will undertake activities that significantly affect the intellectual property to which the third-party beneficiary has rights (see paragraphs AG75 and AG76);

(b) The rights granted by the license directly expose the third-party beneficiary to any positive or negative effects of the transfer recipient’s activities identified in paragraph AG74(a); and

(c) Those activities do not result in the transfer by the transfer recipient of a good or a service to the third-party beneficiary as those activities occur (see paragraph 26).
AG75.AG76. Factors that may indicate that an entity (a transfer provider) could reasonably expect that a transfer recipient will undertake activities that significantly affect the intellectual property include the transfer recipient’s customary practices, published policies or specific statements.

AG76.AG77. A transfer recipient’s activities significantly affect the intellectual property to which the third-party beneficiary has rights when either:

(a) Those activities are expected to significantly change the form (for example, the design or content) or the functionality (for example, the ability to perform a function or task) of the intellectual property; or

(b) The ability of the third-party beneficiary to obtain economic benefits or service potential from the intellectual property is substantially derived from, or dependent upon, those activities.

Accordingly, if the intellectual property to which the third-party beneficiary has rights has significant stand-alone functionality, a substantial portion of the economic benefits or service potential of that intellectual property is derived from that functionality. Consequently, the ability of the third-party beneficiary to obtain economic benefits or service potential from that intellectual property would not be significantly affected by the transfer recipient’s activities unless those activities significantly change its form or functionality. Types of intellectual property that often have significant stand-alone functionality include software, biological compounds or drug formulas, and completed media content (for example, films, television shows and music recordings).

AG77.AG78. If the criteria in paragraph AG74 are met, an entity (a transfer provider) shall account for the transfer recipient’s promise to grant a license to a third-party beneficiary as a performance obligation satisfied over time because the third-party beneficiary will simultaneously receive and consume the economic benefits or service potential from the transfer recipient’s performance of providing access to its intellectual property as the performance occurs (see paragraph 35(a)). An entity shall apply paragraphs 39–45 to select an appropriate method to measure the transfer recipient’s progress towards complete satisfaction of that performance obligation to provide access.

AG78.AG79. If the criteria in paragraph AG74 are not met, the nature of a transfer recipient’s promise is to provide a right to use the transfer recipient’s intellectual property as that intellectual property exists (in terms of form and functionality) at the point in time at which the license is granted to the third-party beneficiary. This means that the third-party beneficiary can direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the license at the point in time at which the license transfers. An entity (a transfer provider) shall account for the transfer recipient’s promise to provide a right to use the transfer recipient’s intellectual property as a performance obligation satisfied at a point in time. An entity shall apply paragraph 38 to determine the point in time at which the license transfers to the third-party beneficiary. However, an expense cannot be recognized for a license that provides a right to use the transfer recipient’s intellectual property before the beginning of the period during which the third-party beneficiary is able to use and to derive the economic benefits or service potential from the license. For example, if a software license period begins before a transfer recipient provides (or otherwise makes available) to the third-party beneficiary a code that enables the third-party beneficiary to immediately use the software, the entity would not recognize an expense before that code has been provided (or otherwise made available).
An entity (a transfer provider) shall disregard the following factors when determining whether a license provides a right to access the transfer recipient’s intellectual property or a right to use the transfer recipient’s intellectual property:

(a) Restrictions of time, geographical region or use—those restrictions define the attributes of the promised license, rather than define whether the transfer recipient satisfies its performance obligation at a point in time or over time.

(b) Guarantees provided by the transfer recipient that it has a valid patent to intellectual property and that it will defend that patent from unauthorized use—a promise to defend a patent right is not a performance obligation because the act of defending a patent protects the value of the transfer recipient’s intellectual property assets and provides assurance to the transfer provider that the license transferred to the third-party beneficiary meets the specifications of the license promised in the binding arrangement.

Usage-Based Royalties

Notwithstanding the requirements in paragraphs 55–58, an entity shall recognize an expense for a usage-based royalty promised in exchange for a license of intellectual property transferred to a third-party beneficiary only when (or as) the later of the following events occurs:

(a) The subsequent usage occurs; and

(b) The transfer recipient’s performance obligation to which some or all of the usage-based royalty has been allocated has been satisfied (or partially satisfied).

The requirement for a usage-based royalty in paragraph AG80 applies when the royalty relates only to a license of intellectual property or when a license of intellectual property is the predominant item to which the royalty relates (for example, the license of intellectual property may be the predominant item to which the royalty relates when the entity (the transfer provider) would ascribe significantly more value to the license than to the other goods or services to which the royalty relates).

When the requirement in paragraph AG81 is met, an expense for a usage-based royalty shall be recognized wholly in accordance with paragraph AG80. When the requirement in paragraph AG81 is not met, the requirements on variable consideration in paragraphs 50–58 apply to the sales-based or usage-based royalty.

Bill-and-Hold Arrangements

A bill-and-hold arrangement is a binding arrangement under which a transfer recipient bills an entity (a transfer provider) for a product, but the transfer recipient retains physical possession of the product until it is transferred to the third-party beneficiary at a point in time in the future.

An entity (a transfer provider) shall determine when the transfer recipient has satisfied its performance obligation to transfer a product to a third-party beneficiary by evaluating when the third-party beneficiary obtains control of that product (see paragraph 38). For some binding arrangements, control is transferred either when the product is delivered to the third-party beneficiary’s site or when the product is shipped, depending on the terms of the binding arrangement (including delivery and shipping terms). However, for some binding arrangements, a
third-party beneficiary may obtain control of a product even though that product remains in the transfer recipient’s physical possession. In that case, the third-party beneficiary has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the product even though it has decided not to exercise its right to take physical possession of that product. Consequently, the transfer recipient does not control the product. Instead, the transfer recipient provides custodial services to the third-party beneficiary over the third-party beneficiary’s asset.

In addition to applying the requirements in paragraph 38, for a third-party beneficiary to have obtained control of a product in a bill-and-hold arrangement, all of the following criteria must be met:

(a) The reason for the bill-and-hold arrangement must be substantive (for example, the entity (the transfer provider) has requested the arrangement);
(b) The product must be identified separately as belonging to the third-party beneficiary;
(c) The product currently must be ready for physical transfer to the third-party beneficiary; and
(d) The transfer recipient cannot have the ability to use the product or to direct it to another purchaser.

If an entity (a transfer provider) recognizes an expense for the purchase of a product on a bill-and-hold basis, the entity shall consider whether the transfer recipient has remaining performance obligations (for example, for custodial services) in accordance with paragraphs 23–31 to which the entity shall allocate a portion of the transaction consideration in accordance with paragraphs 71–84.

**Third-Party Beneficiary Acceptance**

In accordance with paragraph 38(e), a third-party beneficiary’s acceptance of an asset may indicate that the third-party beneficiary has obtained control of the asset. Third-party beneficiary acceptance clauses may allow the entity (the transfer provider) to cancel a binding arrangement or require a transfer recipient to take remedial action if a good or service does not meet agreed-upon specifications. An entity shall consider such clauses when evaluating when the third-party beneficiary obtains control of a good or service.

If a transfer recipient delivers products to a third-party beneficiary for trial or evaluation purposes and the entity (the transfer provider) is not committed to pay any consideration until the trial period lapses, control of the product is not transferred to the third-party beneficiary until either the third-party beneficiary accepts the product or the trial period lapses.

**Transfer Expenses without Performance Obligations (see paragraphs 89–119)**

This [draft] Standard applies the principles in the *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework)* to transfer expenses without performance obligations. Where the transfer recipient of a transfer expense without performance obligations is a public sector entity, the transfer recipient will account for the revenue in accordance with [draft] IPSAS X (ED 71). Transfer expenses without performance obligations may arise from binding arrangements that impose requirements to undertake enforceable activities and/or requirements to incur eligible expenditure (as defined in [draft]
IPSAS X (ED 71)) but not performance obligations on the transfer recipient. Alternatively, transfer expenses without performance obligations may arise where the entity (the transfer provider) transfers resources where there is no binding arrangement.

**Recognition (see paragraphs 90–100)**

**AG90.** In accordance with paragraph 90, an entity (a transfer provider) shall recognize a transfer expense without performance obligations at the earlier of the following dates:

(a) When the entity (the transfer provider) has a present obligation to transfer resources to a transfer recipient; and

(b) When the entity (the transfer provider) ceases to control the resources it has agreed to transfer.

**AG91.** The point at which an entity (a transfer provider) has a present obligation to transfer resources to a transfer recipient will depend upon the terms of the binding arrangement and the circumstances of the transfer expense. For example, an entity (a transfer provider) may enter into a binding arrangement with a university (a transfer recipient), whereby the university undertakes a research project over several years. At the end of the project, the university retains the intellectual property generated by the research project; the binding arrangement is therefore a binding arrangement for a transfer expense without performance obligations, as no goods or services are transferred to a third-party beneficiary or to the entity (the transfer provider). Depending on the terms of the binding arrangement, the entity (the transfer provider) may have a present obligation to transfer the promised resources:

(a) At the commencement of the research project;

(b) Periodically (i.e., at set dates) throughout the research project;

(c) As key project milestones are achieved; or

(d) At the completion of the research project.

**AG92.** In determining the point or points at which an entity (a transfer provider) may have a present obligation to transfer the promised resources, an entity shall consider all relevant facts and circumstances including the terms of the binding arrangement and other evidence; and shall consider whether the promised resources are subject to appropriations (see paragraphs AG96–AG100).

**AG93.** Subject to the requirements of paragraph AG94, where an entity (a transfer provider) transfers the promised resources before having a present obligation to do so, the entity shall not recognize an asset, but shall recognize an expense in accordance with paragraph 90(b). The entity (the transfer provider) does not recognize an asset as it does not have an enforceable right to the return of the resources. The binding arrangement may require the transfer recipient to return the resources to the entity (the transfer provider) in the event of non-compliance with the terms of the binding arrangement. However, until such time as there is a breach of the terms of the binding arrangement, there are no resources that are presently controlled by the entity (the transfer provider). Consequently, the entity (the transfer provider) does not have an asset at the point it transfers the resources, and hence it recognizes an expense.
An entity (a transfer provider) usually ceases to control the resources it has agreed to transfer at the point it transfers those resources to the transfer recipient. However, in some circumstances, an entity (a transfer provider) may retain control of the resources until a later date. For example, an entity (a transfer provider) may make a prepayment, but be entitled to a refund of the prepayment on demand prior to the point at which the entity (the transfer provider) has a present obligation to make the payment. In such circumstances, the entity (the transfer provider) retains control of the resources. Consequently, the entity (the transfer provider) does not derecognize the resources, nor recognize an expense, prior to the point at which it has a present obligation to transfer those resources. Where cash has been transferred, the entity (the transfer provider) may reclassify the asset as a prepayment.

Where the binding arrangement requires the transfer recipient to return the resources to the entity (the transfer provider), either:

(a) In the event of non-compliance with the terms of the binding arrangement, and such a breach of the terms occurs; or,

(b) Where funds remain unspent at a specified date, the entity (the transfer provider) shall recognize an asset and an adjustment to expense to the extent that it has an enforceable right to have the resources returned, and that the return of the resources is probable.

Transfer Expenses without Performance Obligations Subject to Appropriations

An appropriation is defined in IPSAS 24, Presentation of Budget Information in Financial Statements, as an authorization granted by a legislative body to allocate funds for purposes specified by the legislature or similar authority. In some jurisdictions, a binding arrangement for a transfer expense without performance obligations may specify that any future transfer is subject to the appropriation being approved.

In accordance with paragraphs 97–98, an entity (the transfer provider) considers substance over form in determining the effect of such a limitation. In some jurisdictions, an entity (a transfer provider) may be prohibited from transferring the promised resources unless and until the legislature or similar authority has authorized the appropriation. In such circumstance, an entity (the transfer provider) considers that the limitation (that the future transfer is subject to the appropriation being approved) has substance. In other jurisdictions, an entity (a transfer provider) may be not be prohibited from transferring the promised resources, and may have a legal obligation to transfer the resources as a result of the binding arrangement. In such circumstances, the term of the binding arrangement that states that the future transfer is subject to the appropriation being approved has the form of a limitation, but not the substance.

In some jurisdictions, the appropriation process may have more than one stage. A limitation has substance if, at any point in the process, the entity is prohibited from transferring the promised resources until approval is given. Authorization of the appropriation occurs, in substance, at the point at which an entity (the transfer provider) is no longer prohibited from transferring the promised resources.

Where a future transfer is subject, in substance to the appropriation being approved, an entity (the transfer provider) shall not recognize a liability for the transfer expense without
performance obligations prior to the appropriation being approved. Until the appropriation is approved, the binding arrangement is not enforceable, as until this point, there is no legal obligation. A constructive obligation, as defined in IPSAS 19, does not arise as

(a) The transfer recipient will not have a valid expectation that a transfer will be made ahead of the appropriation being made; and

(b) The entity (the transfer recipient) or the legislative body can avoid the transfer by not approving the appropriation.

Transfer expenses without performance obligations may be made as a series of transfers. Where these are subject, in substance, to annual appropriations, approval of an appropriation will give rise to a liability for the current year’s transfer only, subject to the recognition criteria having been met. No liability for transfers beyond the current year arises because these will be subject to further appropriations.

Taxes

Taxes are defined in [draft] IPSAS [X] (ED 71):

Taxes are economic benefits or service potential compulsorily paid or payable to public sector entities, in accordance with laws and/or regulations, established to provide revenue to the government. Taxes do not include fines or other penalties imposed for breaches of the law.

In some jurisdictions, taxes may be referred to by other terms, for example, levies.

In accordance with paragraph 101, taxes paid and payable by an entity (the transfer provider) are transfer expenses without performance obligations. An entity shall account for the income taxes paid or payable in accordance with the international or national accounting standard dealing with income taxes. An entity shall account for payroll taxes (taxes associated with employee benefits) in accordance with IPSAS 39, Employee Benefits. An entity shall account for all other taxes paid or payable in accordance with paragraphs AG103–AG108. However, an entity is not required to account for liabilities that arise from emissions trading schemes in accordance with paragraphs AG103–AG108.

The obligating event (the past event) that gives rise to a liability to pay a tax is the activity that triggers the payment of the tax, as identified by the legislation. For example, if the activity that triggers the payment of the tax is the generation of revenue in the current period and the calculation of that tax is based on the revenue that was generated in a previous period, the obligating event for that tax is the generation of revenue in the current period. The generation of revenue in the previous period is necessary, but not sufficient, to create a present obligation.

An entity does not have a constructive obligation to pay a tax that will be triggered by operating in a future period as a result of the entity being economically compelled to continue to operate in that future period.

The preparation of financial statements under the going concern assumption does not imply that an entity has a present obligation to pay a tax that will be triggered by operating in a future period.

The liability to pay a tax is recognized progressively if the obligating event occurs over a period of time (i.e., if the activity that triggers the payment of the tax, as identified by the legislation,
Exposure Draft 72, Transfer Expenses

AG106. If an obligation to pay a tax is triggered when a minimum threshold is reached, the accounting for the liability that arises from that obligation shall be consistent with the principles established in paragraphs AG103–AG108 of this Interpretation (in particular, paragraphs AG103 and AG106). For example, if the obligating event is the reaching of a minimum activity threshold (such as a minimum amount of revenue or sales generated or outputs produced), the corresponding liability is recognized when that minimum activity threshold is reached.

AG107. An entity shall recognize an asset if it has prepaid a tax if an obligation to pay a tax is triggered when a minimum threshold is reached, the accounting for the liability that arises from that obligation shall be consistent with the principles established in paragraphs AG103–AG108 of this Interpretation (in particular, paragraphs AG103 and AG106). For example, if the obligating event is the reaching of a minimum activity threshold (such as a minimum amount of revenue or sales generated or outputs produced), the corresponding liability is recognized when that minimum activity threshold is reached.

AG108. Fines are defined in IPSAS [X] (ED 71) as economic benefits or service potential received or receivable by public sector entities, as determined by a court or other law enforcement body, as a consequence of the breach of laws or regulations. The past event for the recognition of a transfer expense without performance obligations in respect of a fine is the imposition of the fine by a court or other law enforcement body.

Measurement (see paragraphs 102–119)

AG109. In accordance with paragraph 102, where an entity (a transfer provider) recognizes an expense at the date it transfers the resources to the transfer recipient, the entity shall measure the expense at the carrying amount of the resources transferred. In many cases, the resource transferred will be cash, and the expense will be measured at the amount of the cash transferred. Where the resource transferred is a non-cash asset, the expense will be measured at the carrying amount of the asset transferred. In accordance with paragraph 114, the entity (the transfer provider) does not revalue the assets prior to derecognizing them. For example, if an entity (a transfer provider) transfers inventory to a transfer recipient, it measures the expense at the carrying amount of the inventory transferred, not the fair value of the inventory.

AG110. In accordance with paragraph 103, where an entity (a transfer provider) recognizes an expense prior to transferring the resources to the transfer recipient, it shall measure the expense and liability at the best estimate of the costs that the entity (the transfer provider) will incur in settling the liability. Where the resources to be transferred to the transfer recipient, for example where the entity (the transfer provider) has a present obligation to transfer a fixed amount of cash, or a specific non-financial asset, the liability will be measured at the carrying amount of the cash or non-cash asset to be transferred, adjusted, where necessary, for the time value of money in accordance with paragraph 109.

AG111. A transfer expense without performance obligations may include variable costs where, for example, the entity (the transfer provider) has agreed to meet the costs, or a portion of the costs, incurred by the transfer recipient in carrying out a specified activity. Such arrangements may also specify a maximum amount for the transfer expense without performance obligations. In accordance with paragraph 105, an entity’s (a transfer provider’s) best estimate of the amount it will incur to settle the liability reflects the entity’s assessment of the costs that the transfer recipient is likely to incur.
AG112-AG114. When the entity (the transfer provider) makes its best estimate of the amount it will incur to settle the liability, the entity (the transfer provider) shall consider all information that is reasonably available to the entity. Where the binding arrangement that establishes a transfer expense without performance obligations that includes variable costs specifies the expected amount of the transfer expense, an entity (the transfer provider) may use this figure as its best estimate where this is consistent with any other evidence available to the entity (the transfer provider). The figure specified in the binding arrangement is most likely to provide a reliable estimate in the early days of the binding arrangement. This may change as the transfer recipient undertakes the activities specified in the binding arrangement, and the entity (the transfer provider) shall update its estimate as it obtains more recent evidence.

AG113-AG115. In rare cases, for example where the binding arrangement either does not specify an expected amount and where additional evidence (such as the costs incurred by the transfer recipient) is not available, the entity (the transfer provider) may not be able to make a reliable estimate of the liability. In such cases, the recognition criteria for the liability are not met, and no liability or expense are recognized until such time as a reliable estimate can be made. This may be the point at which the entity (the transfer provider) transfers the promised resources to the transfer recipient.
Amendments to Other IPSAS

Amendments to IPSAS 1, *Presentation of Financial Statements*

Paragraph 88 is amended, and paragraph 153N is added. New text is underlined, and deleted text is struck through.

...  

Structure and Content  

...  

Statement of Financial Position  

...  

*Information to be Presented on the Face of the Statement of Financial Position*

88. **As a minimum, the face of the statement of financial position shall include line items that present the following amounts:**

- (b) **Property, plant, and equipment;**
- (c) **Investment property;**
- (d) **Intangible assets;**
- (e) **Financial assets (excluding amounts shown under (e), (g), (h) and (i));**
- (f) **Investments accounted for using the equity method;**
- (g) **Inventories;**
- (h) **Recoverables from non-exchange transactions (taxes and transfers);**
- (i) **Transfer provider’s binding arrangement assets;**
- (j) **Receivables from exchange transactions;**
- (k) **Cash and cash equivalents;**
- (l) **Taxes and transfers payable;**
- (m) **Social benefits liabilities;**
- (n) **Transfer provider’s binding arrangement liabilities;**
- (o) **Payables under exchange transactions;**
- (p) **Provisions;**
- (q) **Financial liabilities (excluding amounts shown under (j), (k) and (l));**
- (r) **Non-controlling interest, presented within net assets/equity;** and
- (s) **Net assets/equity attributable to owners of the controlling entity.**
Effective Date

Paragraph 88 was amended by [draft] IPSAS [X] (ED 72), Transfer Expenses, issued in [Month] [Date]. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, [Year]. Earlier application is encouraged. If an entity applies the amendment for a period beginning before January 1, [Year] it shall disclose that fact and apply [draft] IPSAS [X] (ED 72) at the same time.

Amendments to IPSAS 2, Cash Flow Statements
Paragraph 22 is amended and paragraph 63H is added. New text is underlined, and deleted text is struck through.

Presentation of a Cash Flow Statement

Operating Activities

22. Cash flows from operating activities are primarily derived from the principal cash-generating activities of the entity. Examples of cash flows from operating activities are:

(l) (a) Cash receipts from taxes, levies, and fines;
(u) (b) Cash receipts from charges for goods and services provided by the entity;
(v) (c) Cash receipts from grants or transfers and other appropriations or other budget authority made by central government or other public sector entities;
(w) (d) Cash receipts from royalties, fees, commissions, and other revenue;
(x) (da) Cash payments to beneficiaries of social benefit schemes;
(y) (db) Cash payments for transfer expenses;
(z) (e) Cash payments to other public sector entities to finance their operations (not including loans);
(aa) (f) Cash payments to suppliers for goods and services;
(bb) (g) Cash payments to and on behalf of employees;
(cc) (h) Cash receipts and cash payments of an insurance entity for premiums and claims, annuities, and other policy benefits;
(dd) (i) Cash payments of local property taxes or income taxes (where appropriate) in relation to operating activities;
(ee) (j) Cash receipts and payments from contracts held for dealing or trading purposes;
(ff) (k) Cash receipts or payments from discontinuing operations; and
(gg) (l) Cash receipts or payments in relation to litigation settlements.

Some transactions, such as the sale of an item of plant, may give rise to a gain or loss that is included in surplus or deficit. The cash flows relating to such transactions are cash flows from investing activities. However, cash payments to construct or acquire assets held for rental to others and subsequently held for sale as described in paragraph 83A of IPSAS 17, Property, Plant, and Equipment are cash flows from operating activities. The cash receipts from rents and subsequent
sales of such assets are also cash flows from operating activities.

... 

**Effective Date**

63H. Paragraph 22 was amended by [draft] IPSAS [X] (ED 72), *Transfer Expenses*, issued in [Month] [Date]. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, [Year]. Earlier application is encouraged. If an entity applies the amendment for a period beginning before January 1, [Year] it shall disclose that fact and apply [draft] IPSAS [X] (ED 72) at the same time.

... 

**Amendments to IPSAS 33, First-time Adoption of Accrual Basis International Public Sector Accounting Standards (IPSASs)**

Paragraphs 41A, 43A, 43B and 154H are added. New text is underlined, and deleted text is struck through.

... 

**Exemptions that Affect Fair Presentation and Compliance with Accrual Basis IPSASs during the Period of Transition**

... 

**Three Year Transitional Relief Period for the Recognition and/or Measurement of Assets and/or Liabilities**

Recognition and/or Measurement of Assets and/or Liabilities

... 

41A. To the extent that a first-time adopter applies the exemptions in paragraphs 36 and 38 which allows a three year transitional relief period to not recognize and/or measure financial liabilities, it is not required to recognize and/or measure any related expenses in terms of [draft] IPSAS [X] (ED 72), *Transfer Expenses*.
Recognition and/or Measurement of Transfer Expenses

43A. A first-time adopter is not required to change its accounting policy in respect of the recognition and measurement of transfer expenses for reporting periods beginning on a date within three years following the date of adoption of IPSASs. A first-time adopter may change its accounting policy in respect of revenue from transfer expenses on a class-by-class basis.

43B. The transitional provision in paragraph 43A is intended to allow a first-time adopter a period to develop reliable models for recognizing and measuring transfer expenses in accordance with [draft] IPSAS [X] (ED 72), Transfer Expenses, during the period of transition. The first-time adopter may apply accounting policies for the recognition and/or measurement of transfer expenses that do not comply with the provisions of [draft] IPSAS [X] (ED 72). The transitional provision in paragraph 43A allows a first-time adopter to apply [draft] IPSAS [X] (ED 72) incrementally to different classes of transfer expenses. For example, a first-time adopter may be able to recognize and measure payments of property taxes and some other classes of transfer expenses in accordance with [draft] IPSAS [X] (ED 72) from the date of adoption of IPSASs, but may require three years to fully develop a reliable model for recognizing and measuring transfer expenses with performance obligations.

Scope of Social Benefits in GFS
**Basis for Conclusions**

This Basis for Conclusions accompanies, but is not part of, [draft] IPSAS X (ED 72), Transfer Expenses.

**Objective (paragraph 1)**

BC1. The primary objective of most public sector entities is to deliver services to the public, rather than to make profits and generate a return on equity to investors. For many governments, the delivery of services to the public through social benefits, collective and individual services and transfer expenses accounts for a significant portion of their expenditure.

BC2. Despite the importance of social benefits, collective and individual services and transfer expenses for most governments, until recently there had been little guidance in the IPSASB’s literature on how to account for these transactions. The IPSASB undertook a phased program of work to address these transactions, beginning with IPSAS 42, *Social Benefits*, issued in January 2019 and continuing with *Collective and Individual Services* (Amendments to IPSAS 19) issued in January 2020. [Draft] IPSAS [X] (ED 72), *Transfer Expenses*, issued in [date], completes this program and fills a significant gap in the IPSASB’s literature.

BC3. [Draft] IPSAS [X] (ED 72) provides guidance to preparers about the nature, amount, timing and uncertainty of expenditure and cash flows arising from transfer expenses.

**Scope (paragraphs 2–5)**

BC4. Prior to [Draft] IPSAS [X] (ED 72) being issued, non-exchange transactions were defined in IPSAS 9, *Revenue from Exchange Transactions*, as follows: Non-exchange transactions are transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.

BC5. This definition includes covered a wide range of transactions, including some that were addressed in other Standards. As an example, expenses associated with concessionary loans are addressed in IPSAS 29, *Financial Instruments: Recognition and Measurement*, and its successor Standard, IPSAS 41, *Financial Instruments*. It followed that a future Standard addressing non-exchange expenses would need to clearly set out which transactions would be within its scope and which transactions would be outside its scope.

BC6. The IPSASB issued its Consultation Paper (CP), *Accounting for Revenue and Non-Exchange Expenses*, in August 2017. The CP discussed various types of non-exchange expenses, including collective services, universally accessible services, and grants, contributions and other transfers, but did not discuss the scope of non-exchange expenses any further.

BC7. The CP did not discuss social benefits, which were being addressed in a separate active project. Collective services and universally accessible services are now referred to as collective and individual services, and have been addressed in a separate project. As noted above, the IPSASB has issued final pronouncements addressing these transactions.

BC8. In developing [draft] IPSAS [X] (ED 72), the IPSASB considered the scope of the [draft] Standard, and came to the following conclusions:
(a) The IPSASB noted that respondents to the CP had identified practical difficulties with distinguishing between exchange transactions and non-exchange transactions. The IPSASB also noted that, in part because of these difficulties, the Revenue project that the IPSASB was undertaking simultaneously with its non-exchange project was proposing a distinction between transactions based on the presence (or absence) of a performance obligation. This distinction would largely replace the current exchange transaction/non-exchange transaction distinction. The IPSASB considered that it would be appropriate to apply this distinction to expenses as well as revenue. Requiring an entity to determine whether a transaction was an exchange transaction or a non-exchange transaction, prior to determining whether a transaction had performance obligation would introduce a level of complexity that was unwarranted. For these reasons, the IPSASB agreed that the scope of [draft] IPSAS X (ED 72) should not be based on the definition of a non-exchange expense.

(b) A 'residual expenses' Standard, addressing any expenses not covered in another Standard, was rejected as this would exceed the IPSASB's intentions when issuing the CP. The IPSASB also considered that including exchange transactions might raise additional issues that would require additional time and resources to resolve, but which were not seen as a priority by the IPSASB's stakeholders.

(c) The IPSASB noted that the main group of transactions discussed in the CP and not addressed by the IPSASB's other Standards or active projects was grants, contributions and other transfers. The IPSASB noted that this group of transactions was covered by the definition of 'transfers' in the statistical reporting frameworks (this definition is discussed further in paragraphs BC11–BC12). Aligning the scope of [draft] IPSAS X (ED 72) with the definition of 'transfers' in the statistical reporting frameworks would be consistent with the IPSASB's Policy Paper, Process for Considering GFS Reporting Guidelines during Development of IPSASs. Consequently, the IPSASB agreed to align the scope of [draft] IPSAS X (ED 72) with the definition of 'transfers' in the statistical reporting frameworks.

BC9. Having agreed to base the scope of [draft] IPSAS X (ED 72) with the definition of 'transfers' in the statistical reporting frameworks, the IPSASB specifically considered research grants. The IPSASB noted that where the grantee retained the intellectual property resulting from the research, such grants would be covered by the definition of transfers. Where the intellectual property passed to the grantor, such grants would not be covered by the definition of transfers. The IPSASB noted that this was consistent with the approach taken in the statistical reporting frameworks. Consequently, the IPSASB agreed that no specific requirements in respect of research grants were required.

BC10. The IPSASB also noted that contributions from owners and distributions to owners did not meet the definition of transfers, and were consequently outside the scope of [draft] IPSAS X (ED 72). This is explained further in paragraph 4 of [draft] IPSAS X (ED 72).

Definitions (paragraphs 6–7)

BC11. The Government Finance Statistics Manual 2014 (GFSM 2014) defines a transfer as follows: A transfer is a transaction in which one institutional unit provides a good, service, or asset to another unit without receiving from the latter any good, service, or asset in return as a direct counterpart.
BC12. The IPSASB noted that this definition does not cover all non-exchange transactions as defined in IPSAS 9 (see the definition in paragraph BC4 above). Specifically, the definition does not cover transactions where one party provides a good, service or asset to another party, and receives a good, service or asset in return, but that good, service or asset is not of approximately equal value. The IPSASB noted that determining what amounted to approximately equal value was one of the difficulties stakeholders had experienced with the definition of non-exchange expenses. Consequently, the IPSASB considered that clarity of the GFSM 2014 definition of transfers outweighed the disadvantages of excluding a small number of non-exchange expenses from the scope of [draft] IPSAS [X] (ED 72).

BC13. Having agreed to use the GFSM 2014 definition of transfers as the basis for the scope of [draft] IPSAS [X] (ED 72), the IPSASB agreed to base its definition of ‘transfer expenses’ on the GFSM definition. The IPSASB agreed to adopt the term transfer expenses as the term transfers had previously been used in IPSAS 23, Revenue from Non-Exchange Transactions (Taxes and Transfers), where the term transfers referred to inflows (i.e., revenue) only.

BC14. [Draft] IPSAS [X] (ED 72) complements [draft] IPSAS [X] (ED 70), Revenue with Performance Obligations, and [draft] IPSAS [X] (ED 71), Revenue without Performance Obligations. Consequently, [draft] IPSAS [X] (ED 72) relies on the definitions in those [draft] Standards where possible (see paragraph 7 of [draft] IPSAS [X] (ED 72)). In some cases, the switch in perspective from recognizing revenue to recognizing an expense required a modification to the definitions. Consequently, the IPSASB agreed to provide definitions of the following additional terms in [draft] IPSAS [X] (ED 72):

(a) Stand-alone purchase price;
(b) Transaction consideration;
(c) Transfer provider’s binding arrangement asset; and
(d) Transfer provider’s binding arrangement liability.

These definitions are based on the definitions of stand-alone price, transaction price, binding arrangement liability and binding arrangement asset in [draft] IPSAS [X] (ED 70).

BC15. The IPSASB also considered the definition of expenses in IPSAS 1, Presentation of Financial Statements, and concluded that no changes were required. The IPSASB agreed to include a cross-reference to this definition in [draft] IPSAS [X] (ED 72) (see paragraph 7 of [draft] IPSAS [X] (ED 72)).

Transfer Expenses with Performance Obligations (paragraph 8)

BC16. One of the drivers that led to the IPSASB developing the CP was the issuing of IFRS 15, Revenue from Contracts with Customers, by the International Accounting Standards Board (the IASB®). IFRS 15 introduced a performance obligation approach for the recognition of revenue. The IPSASB considered whether to adopt a similar approach in its revenue standards. The IPSASB concluded that an extended version of the approach in IFRS 15 would be appropriate for revenue transactions with performance obligations, for the following reasons:

(a) The approach is consistent with the IPSASB’s Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework);
(b) The approach is consistent with other IPSAS; and

(c) The approach resolves the problem of determining whether a transaction is an exchange transaction or a non-exchange transaction by using a different basis in determining the accounting policy to be followed.

BC17. Consequently, the IPSASB proposed the adoption of a Public Sector Performance Obligation Approach (PSPOA) for revenue in the CP.

BC18. The IPSASB also considered whether a similar approach would be appropriate for the recognition of expenses within the scope of [draft] IPSAS [X] (ED 72), noting that the performance obligations would be those imposed on the transfer recipient. The IPSASB noted that the advantages of adopting the PSPOA for revenue would apply equally to expenses.

BC19. Consequently, the IPSASB included a preliminary view in the CP that “where grants, contributions and other transfers contain either performance obligations or stipulations, they should be accounted for using the PSPOA which is the counterpart to the IPSASB’s preferred approach for revenue.”

BC20. Respondents to the CP were, on the whole, supportive of adopting the PSPOA for expenses, but raised several issues. The IPSASB agreed, therefore, to develop the PSPOA for use in [draft] IPSAS [X] (ED 72), and proceeded to consider the technical issues associated with the PSPOA.

Existence of Asset

BC21. The PSPOA for expenses applies where the entity has entered into a binding arrangement that imposes a performance obligation on the other party to transfer goods or services to a third-party beneficiary. The IPSASB noted that in some cases, the terms of the binding arrangement would result in the entity having a present obligation to transfer resources to the other party prior to the other party having satisfied their performance obligations. If the entity had not transferred the resources, this would give rise to a liability.

BC22. If the entity were to recognize an expense as the other party satisfied its performance obligations, it follows that the entity should not recognize an expense at the point it recognizes the liability, but a corresponding asset. The IPSASB, therefore, considered the nature of that asset.

BC23. The IPSASB noted that the asset could not be the resources transferred, or the right to have those resources returned, as at the point the liability is recognized, the resources have been transferred.

BC24. The Conceptual Framework defines an asset as:
   A resource presently controlled by the entity as a result of a past event

BC25. The IPSASB considered two components of this definition – whether there is a resource (and if so, what that resource is); and whether the resource is presently controlled by the entity as a result of a past event.

Resource

BC26. The first component of the definition of an asset is “a resource.” The Conceptual Framework defines a resource as “an item with service potential or the ability to generate economic benefits.”

BC27. If the goods or services were to be transferred to the transfer provider, it would clear that there is a right to receive resources, and consequently, the definition of a resource would be met. However,
the definition of a transfer expense excludes transactions where the transfer provider receives goods or services.

BC28. In a transfer expense, the transfer provider provides resources to the transfer recipient to deliver goods or services to third-party beneficiaries (service recipients). The IPSASB considered whether the right to have goods or services transferred to the specified third parties satisfies the definition of a resource as "an item with service potential or the ability to generate economic benefits." The IPSASB concluded that, as the goods or services being transferred will allow the transfer provider to meet their objectives, the right to have goods or services transferred to the specified third parties will satisfy the definition of a resource as that right will be an item with service potential.

Control

BC29. The second component of the definition of an asset is that the resource is “presently controlled by the entity as a result of a past event.”

BC30. The Conceptual Framework gives four indicators of control:

(a) Legal ownership;
(b) Access to the resource, or the ability to deny or restrict access to the resource;
(c) The means to ensure that the resource is used to achieve its objectives; and
(d) The existence of an enforceable right to service potential or the ability to generate economic benefits arising from a resource.

BC31. The transfer provider will have an enforceable right under the binding arrangement to have goods or services transferred to a third-party beneficiary. The IPSASB concluded that, as a result of this enforceable right, the transfer provider will have the means to ensure that the resource is used to achieve the transfer provider’s objectives. The IPSASB agreed that means that the transfer provider presently controls the resource.

BC32. In order to meet the definition of an asset, this present control must be as a result of a past event. Both the enforceable right to have the goods or services transferred to a third-party beneficiary (the resource), and the control of that resource arise from the binding arrangement. It follows that the past event is the entering into the binding arrangement.

Conclusion

BC33. Consequently, the IPSASB concluded that, once the transfer provider has entered into the binding arrangement, the transfer provider would presently control the resource as a result of a past event once the transfer provider has entered into the binding arrangement. The item therefore satisfies the definition of an asset.

BC34. The IPSASB agreed that the transfer provider would recognize an asset for the right to have goods or services provided to third-party beneficiaries. The transfer provider would control this asset until the transfer recipient met its performance obligations. At this point, the asset would be derecognized, and an expense recognized, as the transfer recipient provided the goods or services to the third-party beneficiaries. The IPSASB concluded that this analysis provided the conceptual grounds for applying agreed that this is consistent with adopting the PSPOA for to some transfer expenses.
Public Sector Performance Obligation Approach. (paragraphs 9–88)

BC35. Having agreed that there was a conceptual basis for adopting the PSPOA for expenses, the IPSASB developed the detailed recognition and measurement requirements. In the CP, the IPSASB had expressed the view that “it is important for the approach in a Non-Exchange Expenses standard to mirror the approach adopted for equivalent revenue transactions.” Consequently, the IPSASB agreed to take, as the starting point for the PSPOA in [draft] IPSAS [X] (ED 72), the recognition and measurement requirements of [draft] IPSAS [X] (ED 70), amended to fit the transfer provider’s perspective, to the extent that this did not conflict with the Conceptual Framework or requirements in other IPSAS.

BC36. The PSPOA for revenue adopted in [draft] IPSAS [X] (ED 70) is based on the requirements in IFRS 15. The decisions the IPSASB took in modifying those requirements in [draft] IPSAS [X] (ED 70) are explained in the Basis for Conclusions to [draft] IPSAS [X] (ED 70), and are not repeated here. This Basis for Conclusions explains the decisions taken by the IPSASB in modifying the PSPOA for revenue to form the PSPOA for expenses adopted in [draft] IPSAS [X] (ED 72).

Pervasive Modifications Due to the Scope of [Draft] IPSAS [X] (ED 72)

BC37. In modifying the PSPOA to be suitable for accounting for expenses, the IPSASB identified two pervasive issues that required addressing:

(a) Expense perspective. The requirements in [draft] IPSAS [X] (ED 70) have been amended modified to reflect the transfer provider’s perspective, that is, to reflect a requirement that the transfer provider recognizes an expense when the transfer recipient’s performance obligations have been satisfied. In making these amendments, the IPSASB has sought to make it clear that the performance obligations that determine when an expense is recognized are the performance obligations imposed on the transfer recipient in the binding arrangement. The performance obligations imposed on the transfer provider (to transfer resources, usually cash, to the transfer recipient) do not determine when an expense should be recognized under the PSPOA.

(b) Third-party beneficiaries. The scope of [draft] IPSAS [X] (ED 72) is limited to transactions where the transfer provider does not receive any goods, services or assets in return. [Draft] IPSAS [X] (ED 70) does not have this limitation, and therefore includes applies to transactions where the purchaser pays the supplier and receives goods or services in return. The requirements in [draft] IPSAS [X] (ED 70) have been amended modified to ensure that in all cases they refer to third-party beneficiaries as the only recipients under the PSPOA.

Other Modifications to the Recognition and Measurement Requirements

BC38. Some requirements in [draft] IPSAS [X] (ED 70) are not relevant to the transfer provider, for example the guidance on assessing the probability of collecting the promised consideration, and the guidance on agreements to repurchase transferred assets. Such requirements are omitted from [draft] IPSAS [X] (ED 72). In omitting this guidance, the IPSASB agreed to retain guidance that it considered might be relevant to transfer providers in a limited number of circumstances. An example of the guidance the IPSASB agreed to retain is the guidance on bill-and-hold arrangements, which the IPSASB considered might apply where the transfer recipient was producing vaccines or textbooks, and delivering these to the third-party beneficiaries on demand.
BC39. [Draft] IPSAS [X] (ED 70) includes both input methods and output methods in the guidance on measuring the satisfaction of performance obligations. [Draft] IPSAS [X] (ED 72) emphasizes output methods (from the transfer recipient’s perspective). The IPSASB took the view that the transfer provider is unlikely to have the information required to use an input method. However, the IPSASB also agreed not to prohibit input methods, but to direct preparers to the guidance in [draft] IPSAS [X] (ED 70) on the rare occasions when the transfer provider has sufficient information about a transfer recipient’s inputs to make the use of an input method appropriate. The IPSASB decided to adopt the same approach to other guidance in [draft] IPSAS [X] (ED 70) where it considered it unlikely that the transfer provider would have sufficient information to be able to apply the guidance, for example the estimated cost approach for determining the stand-alone purchase price. The option to apply the additional guidance in [draft] IPSAS [X] (ED 70) on the rare occasions when the transfer provider has sufficient information to do so is explained in paragraph AG25 of [draft] IPSAS [X] (ED 72).

BC40. In accounting for performance obligations that are satisfied over time, [draft] IPSAS [X] (ED 70) includes guidance on when a transfer recipient’s right to payment for work completed to date is sufficient to cover costs plus a reasonable margin. The IPSASB concluded that this guidance is relevant to the transfer recipient, as revenue is only recognized when the right to payment exceeds the transfer recipient’s costs. However, for the transfer provider, the only relevant consideration is whether it has a present obligation to pay for the transfer recipient’s work completed to date. The IPSASB therefore agreed not to include any guidance on determining whether the right to payment is sufficient to cover costs plus a reasonable margin.

BC41. [Draft] IPSAS [X] (ED 70) measures non-cash consideration at fair value, which is consistent with the measurement approach for non-cash consideration used in other IPSAS. In [draft] IPSAS [X] (ED 72), non-cash consideration is measured at the carrying amount of the asset derecognized. This is consistent with the derecognition provisions in other IPSAS. While this difference may result in the transfer provider and the transfer recipient measuring a transaction at different amounts, the IPSASB considered that the measurement approaches adopted in the two [draft] Standards are consistent with the Conceptual Framework.

BC42. [Draft] IPSAS [X] (ED 70) includes guidance on purchaser acceptance. The IPSASB agreed to refer instead to the third-party beneficiary’s acceptance, and to redraft the guidance to be relevant to the context of [draft] IPSAS [X] (ED 72).

Complexity of Requirements

BC43. The IPSASB reviewed the requirements for the PSPOA and considered whether these were more complex than was required for accounting for transfer expenses. The IPSASB accepted that in many cases, a binding arrangement for a transfer expense would contain only a single performance obligation and that many of the requirements would therefore not be needed. However, the IPSASB noted that there would be some transactions, for example where a national government provided funding to a provincial government with multiple performance obligations, possibly over multiple accounting periods, where the more detailed requirements would be needed.

BC44. Consequently, the IPSASB concluded that the level of complexity was appropriate for the transactions that might be encountered by some public sector entities. In coming to this conclusion,
the IPSASB noted that where a transaction contained a single performance obligation, the application of the guidance requirements would be straightforward.

Transfer Expenses without Performance Obligations (paragraphs 89–119)

BC45. [Draft] IPSAS [X] (ED 71) specifies the requirements for accounting for revenue without performance obligations. The IPSASB considered whether, and to what extent, it would be appropriate to base the requirements for accounting for transfer expenses without performance obligations on the guidance in [draft] IPSAS [X] (ED 71).

BC46. [Draft] IPSAS [X] (ED 71) includes two approaches to recognizing revenue without performance obligations:

(a) A binding arrangement may impose a requirement on a transfer recipient to undertake an enforceable activity (i.e., an obligation to act in a certain way) and/or to incur eligible expenditure (i.e., an obligation to incur expenditure on goods or services specified in the binding arrangement). In such cases, the transfer recipient recognizes revenue as it complies with the terms of the binding arrangement.

(b) The transfer recipient receives resources without the existence of a binding arrangement. In such cases, the transfer recipient recognizes revenue as it gains control of the resources.

BC47. The IPSASB considered whether, and to what extent, it would be appropriate to base the requirements for accounting for transfer expenses without performance obligations on each of these approaches in turn.

Enforceable Activities and Eligible Expenditure

BC48. The revenue recognition requirements where a binding arrangement imposes a requirement to undertake enforceable activities and/or incur eligible expenditure on the transfer recipient are similar to those for revenue with performance obligations. Revenue is only recognized as the transfer recipient complies with its obligations.

BC49. The IPSASB therefore considered these requirements in the light of its conclusions in respect of transfer expenses with performance obligations (see paragraphs BC16–BC34). The IPSASB noted that, under the PSPOA, a transfer provider recognized an expense as the transfer recipient complied with its obligations because, until that point, it had an asset for the right to require the transfer recipient to transfer goods or services to a third-party beneficiary.

BC50. The IPSASB considered whether a similar asset would arise where the binding arrangement imposes a requirement to undertake enforceable activities and/or incur eligible expenditure on the transfer recipient.

BC51. The IPSASB noted that a requirement to undertake enforceable activities and/or incur eligible expenditure does not involve the transfer of goods or services to another party. Consequently, the IPSASB doubted whether it would be possible in all circumstances to identify a resource.

BC52. Furthermore, the IPSAS considered that even if it were possible to identify a resource (for example, where a binding arrangement requires a transfer recipient to construct an asset), that resource will never be controlled by the transfer provider. The IPSASB concluded that the definition of an asset is not met, and that no asset could be recognized on the statement of financial position.
BC53. The IPSASB then considered whether the right to have the resources returned if the transfer recipient did not comply with its obligations in the binding arrangement, or had not spent the funds by the agreed date, would constitute an asset for the transfer provider. The IPSASB concluded that, at the point that the resources are transferred, the transfer provider does not have a right of return. The right of return is contingent on the transfer recipient’s future non-compliance with the binding arrangement (or future failure to fully utilize the funds), and therefore does not constitute a resource that is presently controlled by the transfer provider. Consequently, the IPSASB concluded that the right to have the resources returned if the transfer recipient did not comply with its obligations in the binding arrangement, or has not spent the funds by the agreed date, does not give rise to an asset for the transfer provider at the point the resources are transferred.

BC54. In the absence of an asset, the recognition of a liability (or the derecognition of another asset) would normally result in the recognition of an expense. However, the Conceptual Framework allows the IPSASB to require the recognition of other resources where this is necessary to achieve the objectives of financial reporting. The recognition of other resources could result in an expense being recognized as the transfer recipient complies with its obligations, mirroring the treatment in [draft] IPSAS [X] (ED 71).

BC55. The IPSASB considered whether the recognition of other resources would be necessary to achieve the objectives of financial reporting. The IPSASB concluded that the recognition of an expense best reflected the substance of the transaction for the transfer provider, and that recognizing other resources would therefore not achieve the objectives of financial reporting.

BC56. Consequently, the IPSASB agreed that, where a binding arrangement imposes a requirement to undertake enforceable activities and/or incur eligible expenditure on the transfer recipient, a transfer provider should not recognize an expense as the transfer recipient complies with its obligations. Rather, the IPSASB agreed that the transfer provider should recognize an expense when it has a present obligation to transfer resources (or, if earlier, when it loses control of those resources).

BC57. The IPSASB agreed that, where a binding arrangement imposes a requirement to undertake enforceable activities and/or incur eligible expenditure on the transfer recipient, it would not be appropriate to base the requirements in [draft] IPSAS [X] (ED 72) on the equivalent requirements for revenue in [draft] IPSAS [X] (ED 71).

Resources Transferred without the Existence of a Binding Arrangement

BC58. In the absence of a binding arrangement, the transfer recipient would recognize revenue when it gained control of the resources, as, in the absence of a binding arrangement, it would have no associated liability.

BC59. The IPSASB considered the application of this principle to the transfer provider, and agreed that, in the absence of a binding arrangement, the transfer provider would not have an asset once control of the resources had been lost. Consequently, the IPSASB agreed that for transfer expenses which did not involve a binding arrangement, it would be appropriate for the requirements in [draft] IPSAS [X] (ED 72) to mirror the equivalent requirements for revenue in [draft] IPSAS [X] (ED 71).

Recognition Principle

BC60. Having concluded that it was not appropriate to mirror the revenue recognition requirements in [draft] IPSAS [X] (ED 71) in all cases, the IPSASB considered the recognition principle that should
apply to transfer expenses without performance obligations. The IPSASB noted that, in accordance with the Conceptual Framework, an expense would be recognized either when an entity recognized a liability without recognizing a corresponding asset, or when it derecognized an asset. The IPSASB concluded that this reflected the substance of transfer expenses without performance obligations, and agreed the following recognition principle:

An entity (a transfer provider) shall recognize a transfer expense without performance obligations at the earlier of the following dates:

(a) When the entity (the transfer provider) has a present obligation to transfer resources to a transfer recipient. In such cases, the entity (the transfer provider) shall recognize a liability representing its obligation to transfer the resources; and

(b) When the entity (the transfer provider) ceases to control the resources; this will usually be the date at which it transfers the resources to the transfer recipient. In such cases, the entity derecognizes the resources it ceases to control in accordance with other Standards.

Specific Recognition Issues

BC61. [Draft] IPSAS [X] (ED 71) contains guidance on accounting for revenue from debt forgiveness. The IPSASB reviewed this guidance and concluded that similar guidance should be included in [draft] IPSAS [X] (ED 72), covering the recognition of an expense (by the transfer provider) when debt owed by a transfer recipient to a transfer provider is forgiven. The IPSASB noted that the derecognition of the debt should be in accordance with IPSAS 41.

BC62. The IPSASB noted that some binding arrangements may require a transfer provider to make a series of transfers, for example one transfer per year over a three-year period. The IPSASB considered when a present obligation to make each transfer would arise, and concluded that this would be dependent on the nature of the binding arrangement. The IPSASB concluded that a transfer provider should apply the recognition principle to each transfer of resources to determine whether an expense is to be recognized.

BC63. The IPSASB noted that in some jurisdictions, a binding arrangement for a transfer expense without performance obligations might be made subject to the appropriation being approved. The IPSASB considered whether such a limitation should affect the recognition of an expense. The IPSASB concluded that the impact of such a limitation would depend on whether the limitation had substance. In some jurisdictions, a transfer provider would be prohibited from transferring the promised resources until the appropriation was approved; in other jurisdictions, no such prohibition would exist. The IPSASB agreed that the transfer provider should consider substance over form, and where the limitation has substance, the transfer provider should not recognize an expense prior to the appropriation being approved. The IPSASB also agreed to include guidance on determining whether the limitation that future transfers were subject to the appropriation being approved has substance.

BC64. [Draft] IPSAS [X] (ED 71) contains guidance on accounting for revenue from taxation. The IPSASB noted that the IASB had issued an interpretation, IFRIC 21, Levies, that addresses the recognition of expenses relating to taxes (other than income taxes). The IPSASB reviewed the interpretation, and concluded that the requirements were consistent with those in [draft] IPSAS [X] (ED 71). In particular, the past event identified in IFRIC 21, which gives rise to an expense is consistent with the taxable event identified in [draft] IPSAS [X] (ED 71), which gives rise to revenue. Consequently,
the IPSASB agreed to incorporate guidance on recognizing an expense arising from taxation, based on the requirements in IFRIC 21.

Measurement

BC65. In a transfer expense, the transfer provider gives up resources. The IPSASB agreed that the expense (and any liability to be recognized) should be measured at the carrying amount of the resources given up, as this is consistent with the derecognition requirements in other IPSAS. The IPSASB agreed that this amount should be adjusted for estimates of variable cost and for the time value of money where appropriate.

BC66. In developing the guidance on subsequent measurement, the IPSASB agreed to extend the application of this guidance to payables arising out of the operation of legislation or regulation that do not meet the definition of a transfer expense. Most payables arising out of the operation of legislation or regulation will be within the scope of [draft] IPSAS [X] (ED 72). However, the IPSASB considered it important to ensure that appropriate guidance on subsequent measurement was available for all such payables. Because payables arising out of the operation of legislation or regulation do not arise from binding arrangements, they are outside the scope of IPSAS 41, and subsequent measurement of such payables is not addressed in other Standards; for example, IPSAS 19, Provisions, Contingent Liabilities and Contingent Assets, only addresses the subsequent measurement of provisions, not payables.

Presentation and Disclosure (paragraphs 120–143)

BC67. The IPSASB developed the presentation and disclosure requirements in [draft] IPSAS [X] (ED 72) by reviewing the equivalent requirements in [draft] IPSAS [X] (ED 70) and [draft] IPSAS [X] (ED 71).

BC68. In carrying out this review, the IPSASB sought to ensure that the presentation and disclosure requirements would provide useful information for users of the financial statements, while avoiding information overload or excessive costs for preparers. A key factor in the review was the context of [draft] IPSAS [X] (ED 72); the IPSASB considered that not all the information that was needed to assess the performance of a transfer recipient was necessary in assessing the performance of a transfer provider. For this reason, the IPSASB agreed not to include disclosure requirements for the disaggregation of expenses and the detailed information on binding arrangement balances.

BC69. The IPSASB also considered whether it would be appropriate to require a transfer provider to disclose how the transfer of goods and services to third-party beneficiaries enables the transfer provider to meet its service objectives. The IPSASB concluded that such information was more suitable for reporting service performance information (see RPG 3, Reporting Service Performance Information).
Implementation Guidance
This guidance accompanies, but is not part of, [draft] IPSAS [X] (ED 72)

Accounting for Transfer Expenses

IG1. The following diagram summarizes the arrangements for accounting for transfer expenses.

Illustrative Examples

These examples accompany, but are not part of, [draft] IPSAS [X] (ED 72), Transfer Expenses. They illustrate aspects of IPSAS [X] (ED 72) but are not intended to provide interpretive guidance.

IE1. These examples portray hypothetical situations illustrating how an entity might apply some of the requirements in [draft] IPSAS [X] to particular aspects of a transfer expense on the basis of the limited facts presented. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific sector illustrated. Although some aspects of the examples may be present in actual fact patterns, all relevant facts and circumstances of a particular fact pattern would need to be evaluated when applying [draft] IPSAS [X] (ED 72).

Scope

IE2. Example 1–Example 3 illustrate the requirements in paragraphs 2–5 and AG5–AG6 of [draft] IPSAS [X] (ED 72) on the determination of whether a transaction is within the scope of [draft] IPSAS [X] (ED 72). Example 3 illustrates the requirement in paragraph 5 regarding transactions with some components that are within the scope of [draft] IPSAS [X] (ED 72) and some components that are within the scope of other Standards.

Example 1  Transaction Where the Transfer Recipient Other Party Provides Goods and Services

IE3. An international organization enters into a binding arrangement to purchase a vehicle from a motor dealer for CU30,000. Under the terms of the binding arrangement, the dealer will also provide maintenance services for three years after the vehicle has been delivered.

Case A—Vehicle is Provided to the International Organization

IE4. The binding arrangement requires the dealer to transfer the vehicle, and provide the subsequent maintenance services, to the international organization.

IE5. The binding arrangement does not give rise to a transfer expense, as the international organization receives the vehicle and the maintenance services in return for providing the consideration of CU30,000. Consequently, the binding arrangement is outside the scope of [draft] IPSAS [X] (ED 72). The international organization applies IPSAS 17, Property, Plant, and Equipment, in accounting for the purchase of the vehicle.

Case B—Vehicle is Provided to a National Government

IE6. The binding arrangement requires the dealer to transfer the vehicle, and provide the subsequent maintenance services, to a national government.

IE7. The binding arrangement gives rise to a transfer expense as the international organization transfers the consideration of CU30,000 to the dealer without receiving any goods, services or assets in return. Rather, the vehicle and maintenance services are transferred to the national government (the third-party beneficiary). The international government (the transfer provider) applies [draft] IPSAS [X] (ED 72) in accounting for the binding arrangement. Because the binding arrangement requires the dealer to transfer goods and services to a third-party beneficiary, the international

---

2 In these examples monetary amounts are denominated in ‘currency units’ (CU)
organization accounts for the binding arrangement as a transfer expense with performance obligations (see paragraphs 8–88).

Example 2 Research Grants

IE8. A national government enters into a binding arrangement with a research university whereby the national government will provide the research university with a grant of CU25 million to undertake research into the effects of restrictive diets on general health.

Case A—National Government Controls Research

IE9. The binding arrangement includes a requirement that the research university will transfer the results of the research to the national government, which will own the intellectual property in the research, and any patents arising out of the research.

IE10. The binding arrangement does not give rise to a transfer expense, as the national government receives the intellectual property in the research in return for providing the research grant. Consequently, the binding arrangement is outside the scope of [draft] IPSAS [X] (ED 72). The national government applies IPSAS 31, Intangible Assets, in accounting for the binding arrangement.

Case B—Research University Controls Research

IE11. The binding arrangement does not require the research university to transfer the results of the research to the national government. Rather, the research university will retain control of the intellectual property in the research, and any patents arising out of the research.

IE12. The binding arrangement gives rise to a transfer expense as the national government transfers the research grant to the research university without receiving any goods, services or assets in return. The national government (the transfer provider) applies [draft] IPSAS [X] (ED 72) in accounting for the binding arrangement. Because the binding arrangement does not require the research university to transfer any goods or services to a third-party beneficiary, the national government accounts for the binding arrangement as a transfer expense without performance obligations (see paragraphs 89–119).

Example 3 Transaction with Components Within the Scope of Other IPSAS

IE13. A local government enters into a binding arrangement to purchase two vehicles from a motor dealer for CU40,000. One vehicle is to be transferred to the local government; the other vehicle is to be transferred to a not-for-profit organization.

IE14. The transfer of the vehicle to the not-for-profit organization is a transfer expense, as the local government transfers part of the consideration to the dealer without receiving any goods or services in return. The transfer of the vehicle to the local government is not a transfer expense, as the local government receives the vehicle in return for part of the consideration. The local government applies IPSAS 17 in accounting for the purchase of the vehicle it receives.

IE15. Paragraph 5(a) of [draft] IPSAS [X] (ED 72) requires an entity to first apply the separation and/or measurement requirements in other Standards if those other Standards specify how to separate and/or initially measure one or more parts of the binding arrangement. IPSAS 17 does not specify how to separate and/or initially measure one or more parts of the binding arrangement. Consequently, the local government applies the requirements in [draft] IPSAS [X] (ED 72) to
Assessing Whether a Transfer Expense Includes a Performance Obligation

IE16. Paragraph 8 of [draft] IPSAS [X] (ED 72) requires an entity to account for transfer expenses with performance obligations using the public sector performance obligation approach. Example 4 provides guidance on determining whether a transfer expense includes a performance obligation.

Example 4  Government Funding of Employment Program

Case A–No Performance Obligations, Specified Time Period, or Reporting to the Government

IE17. A regional government (the transfer provider) provides funding of CU5 million to a social development entity (the transfer recipient) to fund the social development entity’s employment programs. The funding agreement contains a general requirement for the social development entity to spend the entire CU5 million on programs with the goal of improving the unemployment rate in the region. However, the agreement does not specify the time period in which the funds are to be spent, any requirement to fund specific employment programs, nor how the regional government will receive or verify information on how the funds were spent.

IE18. The regional government concludes that the funding agreement is not a binding arrangement, as it does not impose obligations on the transfer recipient; the funding arrangement does not require the social development entity to transfer specific goods or services to third-party beneficiaries. Consequently, the regional government accounts for the funding arrangement as a transfer expense without performance obligations (see paragraphs 89–119).

Case B–Specified Time Period to Spend Funds

IE19. The same facts as in Case A apply to Case B, except that the agreement now specifies that the social development entity is required to spend the funds within a five-year period. In this scenario, the requirement to spend the CU5 million within five years does not result in performance obligations, as the agreement still does not require the transfer of distinct goods or services to third-party beneficiaries—i.e., the social development entity has complete discretion over how and when within the five-year period to spend the funds. Consequently, the regional government accounts for the funding arrangement as a transfer expense without performance obligations (see paragraphs 89–119).

Case C–Specified Time Period to Spend Funds and Specific Reporting to the Government is Required

IE20. The same facts as in Case B apply to Case C, except that the agreement now also specifies how the social development entity is to report its spending to the regional government. For this agreement, although the social development entity now must spend the CU5 million within five years and report the details of its spending to the regional government, the agreement still does not have performance obligations to be enforced, as the social development entity is not required to transfer any distinct goods or services to third-party beneficiaries under the general requirement to spend the funds on employment programs. In other words, the social development entity continues to have full discretion over how to use the funds, so long as the funds are spent on activities that could reasonably relate to improving the unemployment rate in the region. Consequently, the regional government accounts for the funding arrangement as a transfer expense without performance obligations (see paragraphs 89–119).
Case D—Arrangement Includes a Requirement to Deliver Training Courses

IE21. The same facts as in Case C apply to Case D, except that the agreement now requires the social development entity to provide specified training courses to those individuals who have been unemployed for more than 12 months. The regional government is able to monitor and enforce the provision of the training courses. The social development entity continues to have full discretion over how to use the remaining funds. The requirement to provide specified training courses to those individuals who have been unemployed for more than 12 months means that the arrangement now confers enforceable rights and obligations on both parties, and this requirement is, therefore, a performance obligation. The social development entity is required to transfer services to third-party beneficiaries, and this requirement is enforceable by the regional government. The remainder of the agreement does not include performance obligations, as discussed in Case C. Consequently, the regional government accounts for the performance obligation to provide training courses as a transfer expense with performance obligations (see paragraphs 8–88), and accounts for the remainder of the funding arrangement as a transfer expense without performance obligations (see paragraphs 89–119).

Public Sector Performance Obligation Approach

IE22. Example 5–Example 29 illustrate different aspects of the requirements in respect of the public sector performance obligation approach.

Modifications of a Binding Arrangement (Step 1)

IE23. Example 5–Example 9 illustrate the requirements in paragraphs 19–22 of [draft] IPSAS [X] (ED 72) on binding arrangement modifications. In addition, the following requirements are illustrated in these examples:

(a) Paragraphs 23–31 of [draft] IPSAS [X] (ED 72) on identifying transfer recipient’s performance obligations (Example 7 and Example 8);

(b) Paragraphs 55–57 of [draft] IPSAS [X] (ED 72) on constraining estimates of variable consideration (Example 6, Example 8 and Example 9);

(c) Paragraphs 85–88 of [draft] IPSAS [X] (ED 72) on changes in the transaction consideration (Example 6).

Example 5 Modification of a Binding Arrangement for Goods

IE24. An intergovernmental organization (the Organization, which is the transfer provider) enters into a binding arrangement to pay CU12 million to a Not-for-Profit Entity (the Charity, which is the transfer recipient) to provide 1.2 million textbooks (i.e., CU10 per product) to a national government (the third-party beneficiary). The products are transferred to the government over a six-month period. The Charity transfers control of each book at a point in time. After the Charity has transferred control of 600,000 books to the government, the binding arrangement is modified to require the delivery of an additional 300,000 books (a total of 1.5 million identical books) to the government. The additional 300,000 books were not included in the initial binding arrangement.

Case A—Additional Products for a Price that Reflects the Stand-Alone Purchase Price

IE25. When the binding arrangement is modified, the price of the modification to a binding arrangement for the additional 300,000 books is an additional CU2.85 million or CU9.5 per product. The pricing
for the additional books reflects the stand-alone purchase price of the books at the time of the modification to a binding arrangement and the additional books are distinct (in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72)) from the original books.

IE26. In accordance with paragraph 21 of [draft] IPSAS [X] (ED 72), the modification to a binding arrangement for the additional 300,000 books is, in effect, a new and separate binding arrangement for future books that does not affect the accounting for the existing binding arrangement. The Organization recognizes an expense of CU10 per book for the 1.2 million books in the original binding arrangement and CU9.5 per book for the 300,000 books in the new binding arrangement.

Case B—Additional Products for a Price that Does not Reflect the Stand-Alone Purchase Price

IE27. During the process of negotiating the purchase of an additional 300,000 books, the parties initially agree on a price of CU8.0 per book. However, the government and the Organization discover that the initial 600,000 books provided by the Charity contained minor misprints. The Charity promises a partial credit of CU1.5 per book to compensate the Organization for the poor quality of those books. The Charity and the Organization agree to incorporate the credit of CU900,000 (CU1.5 credit × 600,000 books) into the amount that the Charity will require for the additional 300,000 books. Consequently, the modification to a binding arrangement specifies that the price of the additional 300,000 books is CU1.5 million or CU5.0 per product. That price comprises the agreed-upon price for the additional 300,000 books of CU2.4 million, or CU8.0 per book, less the credit of CU900,000.

IE28. At the time of modification, the Organization recognizes the CU900,000 as a reduction of the transaction consideration and, therefore, as a reduction of the expense for the initial 600,000 books transferred. In accounting for the transfer of the additional 300,000 books, the Organization determines that the negotiated price of CU8.0 per product does not reflect the stand-alone purchase price of the additional books. Consequently, the modification to a binding arrangement does not meet the conditions in paragraph 21 of [draft] IPSAS [X] (ED 72) to be accounted for as a separate binding arrangement. Because the remaining books to be delivered are distinct from those already transferred, the Organization applies the requirements in paragraph 22(a) of [draft] IPSAS [X] (ED 72) and accounts for the modification as a termination of the original binding arrangement and the creation of a new binding arrangement.

IE29. Consequently, the amount recognized as an expense for each of the remaining books is a blended price of CU9.33 \(\frac{(CU10 \times 600,000 \text{ books not yet transferred under the original binding arrangement}) + (CU8.0 \times 300,000 \text{ books to be transferred under the modification to a binding arrangement})}{900,000 \text{ remaining books}}\).

Example 6 Change in the Transaction Consideration after a Modification of a Binding Arrangement

IE30. On July 1, 20X0, the Department of Defense (the Department, the transfer provider) enters into a binding arrangement with a supplier (the transfer recipient) to transfer two distinct used military products, light-armored vehicles and spare parts, to a state government (the third-party beneficiary). The light-armored vehicles transfer to the state government at the inception of the binding arrangement and spare parts transfer on March 31, 20X1. The consideration promised by the Department includes fixed consideration of CU1.0 million and variable consideration that is estimated to be CU200,000. The Department includes its estimate of variable consideration in the
transaction consideration because it concludes that it is probable that a significant reversal in the cumulative expenses recognized will not occur when the uncertainty is resolved.

IE31. The transaction consideration of CU1.2 million is allocated equally to the transfer recipient’s performance obligation for the light-armored vehicles and the transfer recipient’s performance obligation for spare parts. This is because both products have the same stand-alone purchase prices and the variable consideration does not meet the criteria in paragraph 83 of [draft] IPSAS [X] (ED 72) that requires allocation of the variable consideration to one but not both of the transfer recipient’s performance obligations.

IE32. When the light-armored vehicles transfer to the state government at the inception of the binding arrangement, the Department recognizes an expense of CU600,000.

IE33. On November 30, 20X0, the scope of the binding arrangement is modified to include the promise to transfer ammunition (in addition to the undelivered spare parts) to the state government on June 30, 20X1 and the price of the binding arrangement is increased by CU300,000 (fixed consideration), which does not represent the stand-alone purchase price of the ammunition. The stand-alone purchase price of the ammunition is the same as the stand-alone purchase prices of the light-armored vehicle and spare parts.

IE34. The Department accounts for the modification as if it were the termination of the existing binding arrangement and the creation of a new binding arrangement. This is because the remaining spare parts and ammunition are distinct from the light-armored vehicle, which the supplier had transferred to the state government before the modification, and the promised consideration for the ammunition does not represent its stand-alone purchase price. Consequently, in accordance with paragraph 22(a) of [draft] IPSAS [X] (ED 72), the consideration to be allocated to the remaining transfer recipient’s performance obligations comprises the consideration that had been allocated to the transfer recipient’s performance obligation for spare parts (which is measured at an allocated transaction consideration amount of CU600,000) and the consideration promised in the modification (fixed consideration of CU300,000). The transaction consideration for the modified binding arrangement is CU900,000 and that amount is allocated equally to the transfer recipient’s performance obligation for spare parts and the transfer recipient’s performance obligation for ammunition (i.e., CU450,000 is allocated to each transfer recipient’s performance obligation).

IE35. After the modification but before the delivery of spare parts and ammunition, the Department revises its estimate of the amount of variable consideration which it expects to be obligated to pay to CU240,000 (rather than the previous estimate of CU200,000). The Department concludes that the change in estimate of the variable consideration can be included in the transaction consideration, because it is probable that a significant reversal in cumulative revenue recognized will not occur when the uncertainty is resolved. Even though the modification was accounted for as if it were the termination of the existing binding arrangement and the creation of a new binding arrangement in accordance with paragraph 22(a) of [draft] IPSAS [X] (ED 72), the increase in the transaction consideration of CU40,000 is attributable to variable consideration promised before the modification. Therefore, in accordance with paragraph 88 of [draft] IPSAS [X] (ED 72), the change in the transaction consideration is allocated to the transfer recipient’s performance obligations for the light-armored vehicle and spare parts on the same basis as at the inception of the binding arrangement. Consequently, the Department recognizes an expense of CU20,000 for the light-armored vehicle in the period in which the change in the transaction consideration occurs. Because
the spare parts had not transferred to the purchaser before the modification to a binding arrangement, the change in the transaction consideration that is attributable to spare parts is allocated to the remaining transfer recipient's performance obligations at the time of the modification to a binding arrangement. This is consistent with the accounting that would have been required by paragraph 22(a) of [draft] IPSAS [X] (ED 72) if that amount of variable consideration had been estimated and included in the transaction consideration at the time of the modification of a binding arrangement.

IE36. The Department then also allocates the CU20,000 increase in the transaction consideration for the modified binding arrangement equally to the transfer recipient's performance obligations for spare parts and ammunition. This is because the products have the same stand-alone purchase prices and the variable consideration does not meet the criteria in paragraph 83 that require allocation of the variable consideration to one but not both of the transfer recipient's performance obligations. Consequently, the amount of the transaction consideration allocated to the transfer recipient's performance obligations for spare parts and ammunition increases by CU10,000 to CU460,000 each.

IE37. On March 31, 20X1, the spare parts are transferred by the supplier to the state government and the Department recognizes an expense of CU460,000. On June 30, 20X1, the ammunition is transferred by the supplier to the state government and the Department recognizes an expense of CU460,000.

Example 7 Modification of a Binding Arrangement for Services

IE38. The Department of Education (the Department, the transfer provider) enters into a three-year binding arrangement with a government shared facilities management services agency (the Agency, the transfer recipient) for the Agency to provide regular maintenance services to schools (the third-party beneficiaries) on a weekly basis. The Department promises to pay CU10 million per year. The stand-alone purchase price of the maintenance services at the inception of the binding arrangement is also CU10 million per year. The Department recognizes expenses of CU10 million per year during the first two years of the Agency providing services. At the end of the second year, the binding arrangement is modified and the fee for the third year is reduced due to budget cuts at the Department to CU8 million. In addition, the Department and the Agency agree to extend the binding arrangement for three additional years for consideration of CU20 million payable in three equal annual instalments of CU6,666,667 at the beginning of years 4, 5 and 6. After the modification, the binding arrangement has four years remaining in exchange for total consideration of CU28 million. The stand-alone purchase price of the services at the beginning of the third year is CU8 million per year. The Department's stand-alone purchase price at the beginning of the third year, multiplied by the remaining number of years to provide services, is deemed to be an appropriate estimate of the stand-alone purchase price of the multi-year binding arrangement (i.e., the stand-alone purchase price is 4 years × CU8 million per year = CU32 million).

IE39. At the inception of the binding arrangement, the Department assesses that each week of maintenance service is distinct in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72). Notwithstanding that each week of maintenance service is distinct, the Department accounts for the binding arrangement for maintenance services as a single performance obligation in accordance with paragraph 23(b) of [draft] IPSAS [X] (ED 72). This is because the weekly maintenance services are a series of distinct services that are substantially the same and have the
same pattern of transfer to the schools (the services are performed for the schools over time and use the same method to measure progress—that is, a time-based measure of progress).

IE40. At the date of the modification, the Department assesses the remaining services to be provided to the schools and concludes that they are distinct. However, the amount of remaining consideration to be paid (CU28 million) does not reflect the stand-alone purchase price of the services to be provided (CU32 million).

IE41. Consequently, the Department accounts for the modification in accordance with paragraph 22(a) of [draft] IPSAS [X] (ED 72) as a termination of the original binding arrangement and the creation of a new binding arrangement with consideration of CU28 million for four years of maintenance service. The Department recognizes expenses of CU7 million per year (CU28 million ÷ 4 years) as the maintenance services are provided over the remaining four years.

Example 8 Modification Resulting in a Cumulative Catch-up Adjustment to Expenses

IE42. The Department of Housing (Housing, the transfer provider) enters into a binding arrangement with the Department of Public Works (Public Works, the transfer recipient) for Public Works to construct a residential building for a Housing Association (the Association, the third-party beneficiary) on land owned by the Association for promised consideration of CU1 million and a bonus of CU200,000 if the building is completed within 24 months. Housing accounts for the promised bundle of goods and services as a single performance obligation satisfied over time in accordance with paragraph 35(b) of [draft] IPSAS [X] (ED 72) because the Association controls the building during construction.

IE43. At the inception of the binding arrangement, Housing excludes the CU200,000 bonus from the transaction consideration because it cannot conclude that it is probable that a significant reversal in the amount of cumulative expenses recognized will not occur. Completion of the building is highly susceptible to factors outside the Public Works’ influence, including weather and regulatory approvals. In addition, Public Works has limited experience with similar types of binding arrangements.

IE44. Housing determines that an output measure, the stage of completion assessed by a qualified quantity surveyor, provides an appropriate measure of progress towards complete satisfaction of the transfer recipient’s performance obligation. By the end of the first year, Housing assesses that Public Works has satisfied 60 per cent of its performance obligation on the basis of the quantity surveyor’s report. Housing reassesses the variable consideration and concludes that the amount is still constrained in accordance with paragraphs 55–57 of [draft] IPSAS [X] (ED 72) because the Association controls the building during construction.

Consequently, the expenses recognized for the first year are CU600,000 (fixed consideration of CU1 million x 60%).

IE45. In the first quarter of the second year, the parties to the binding arrangement agree to modify the binding arrangement by changing the floor plan of the building. As a result, the fixed consideration increases by CU150,000. Total potential consideration after the modification is CU1,350,000 (CU1,150,000 fixed consideration + CU200,000 completion bonus). In addition, the allowable time for achieving the CU200,000 bonus is extended by 6 months to 30 months from the original date of inception of the binding arrangement. At the date of the modification, on the basis of its experience and the remaining work to be performed, which is primarily inside the building and not subject to weather conditions, Housing concludes that it is probable that including the bonus in the transaction
price will not result in a significant reversal in the amount of cumulative revenue recognized in accordance with paragraph 55 of [draft] IPSAS [X] (ED 72) and includes the CU200,000 in the transaction consideration. In assessing the modification to a binding arrangement, Housing evaluates paragraph 28(b) of [draft] IPSAS [X] (ED 72) and concludes (on the basis of the factors in paragraph 30 of [draft] IPSAS [X] (ED 72)) that the remaining goods and services to be provided using the modified binding arrangement are not distinct from the goods and services transferred on or before the date of modification to a binding arrangement; that is, the binding arrangement remains a single performance obligation.

IE46. Consequently, Housing accounts for the modification to a binding arrangement as if it were part of the original binding arrangement (in accordance with paragraph 22(b) of [draft] IPSAS [X] (ED 72)). Housing updates its measure of progress and estimates that Public Works has satisfied 52.9 per cent of its modified performance obligation, based on an updated quantity surveyor’s report. Housing recognizes additional expenses of CU114,150 [(52.9 per cent complete × CU1,350,000 modified transaction consideration) – CU600,000 expenses recognized to date] at the date of the modification as a cumulative catch-up adjustment in the statement of financial performance.

Example 9  Unapproved Change in Scope and Price

IE47. The Department of Housing (Housing, the transfer provider) enters into a binding arrangement with the Department of Public Works (Public Works, the transfer recipient) for Public Works to construct an office building for a Not-for-Profit Organization (the Organization, the third-party beneficiary) on land owned by the Organization. The binding arrangement states that Public Works will complete the building within one year of inception of the binding arrangement. However, Public Works was not able to complete the building until 15 months after inception of the binding arrangement because of storm damage to the building that occurred part way through the construction. The binding arrangement specifically identifies any delay (including force majeure) in Public Works’ delivery of the building to the Organization as an event that entitles Housing to compensation that is equal to actual costs incurred in providing alternative office accommodation to the Organization as a direct result of the delay. Housing is able to demonstrate that the specific direct costs were incurred as a result of the delay in accordance with the terms of the binding arrangement and prepares a claim. Public Works initially disagrees with the claim.

IE48. Housing assesses the legal basis of the claim and determines, on the basis of the underlying terms of the binding arrangement, that it has enforceable rights. Consequently, it accounts for the claim as a modification to a binding arrangement in accordance with paragraphs 19–22 of [draft] IPSAS [X] (ED 72). The modification does not result in any additional goods or services being provided to the Organization. In addition, all of the remaining goods and services after the modification are not distinct and form part of a single performance obligation. Consequently, Housing accounts for the modification in accordance with paragraph 22(b) of [draft] IPSAS [X] (ED 72) by updating the transaction consideration and the measure of progress towards complete satisfaction of the performance obligation. Housing considers the constraint on estimates of variable consideration in paragraphs 55–57 of [draft] IPSAS [X] (ED 72) when estimating the transaction price.
Identifying Performance Obligations (Step 2)

IE49. Example 10 and Example 11 illustrate the requirements in paragraphs 23–31 of IPSAS [X] on identifying performance obligations.

Example 10 Goods and Services are not Distinct

Case A—Significant Integration Service

IE50. The Department of Health (the transfer provider) enters into a binding arrangement with the Department of Public Works (Public Works, the transfer recipient) for Public Works to build a hospital for a Provincial Government (the Province, the third-party beneficiary). Public Works is responsible for the overall management of the project and identifies various promised goods and services, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment and finishing.

IE51. The promised goods and services are capable of being distinct in accordance with paragraph 28(b) of [draft] IPSAS [X] (ED 72). That is, the Province can generate economic benefits or service potential from the goods and services either on their own or together with other readily available resources. This is evidenced by the fact that Public Works, or comparable construction entities, regularly provides many of these goods and services separately to other purchasers. In addition, the Province could generate economic benefits or service potential from the individual goods and services by using, consuming, selling or holding those goods or services.

IE52. However, the promises to transfer the goods and services are not separately identifiable in accordance with paragraph 28(b) of [draft] IPSAS [X] (ED 72) (on the basis of the factors in paragraph 30 of [draft] IPSAS [X] (ED 72)). This is evidenced by the fact that Public Works provides a significant service of integrating the goods and services (the inputs) into the hospital (the combined output) for which the Department of Health has entered into a binding arrangement.

IE53. Because both criteria in paragraph 28 of [draft] IPSAS [X] are not met, the goods and services are not distinct. The Department of Health accounts for all of the goods and services in the binding arrangement as a single performance obligation.

Case B—Significant Integration Service

IE54. An International Organization (the Organization, the transfer provider) enters into a binding arrangement with the Department of Research Sciences (the Department, the transfer recipient) that will result in the Department delivering multiple units of a highly complex, specialized road trains to a National Government (the Government, the third-party beneficiary). The terms of the binding arrangement require the Department to establish a manufacturing process in order to produce the road trains. The specifications are unique to the Government, based on a custom design that is owned by the Organization and that were developed under the terms of a separate binding arrangement that is not part of the current negotiated exchange. The Department is responsible for the overall management of the binding arrangement, which requires the performance and integration of various activities including procurement of materials, identifying and managing subcontractors, and performing manufacturing, assembly and testing.

IE55. The Organization assesses the promises in the binding arrangement and determines that each of the promised train carts is capable of being distinct in accordance with paragraph 28(a) of [draft] IPSAS [X] (ED 72) because the local government can generate economic benefits or service
potential from each train segment on its own. This is because each train cart can function independently of the other train carts.

IE56. The Organization observes that the nature of the Department’s promise is to establish and provide a service of producing the full complement of train carts for which the Organization has entered into a binding arrangement in accordance with the Organization’s specifications. The Organization considers that the Department is responsible for overall management of the binding arrangement and for providing a significant service of integrating various goods and services (the inputs) into its overall service and the resulting road trains (the combined output) and, therefore, the train carts and the various promised goods and services inherent in producing those road trains are not separately identifiable in accordance with paragraph 28(b) and paragraph 30 of [draft] IPSAS [X] (ED 72). In this case, the manufacturing process provided by the Department is specific to its binding arrangement with the Organization. In addition, the nature of the Department’s performance and, in particular, the significant integration service of the various activities means that a change in one of the Department’s activities to produce the train carts has a significant effect on the other activities required to produce the highly complex, specialized road trains such that the Department’s activities are highly interdependent and highly interrelated. Because the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72) is not met, the goods and services that will be provided by the Department are not separately identifiable and, therefore, are not distinct. The Organization accounts for all of the goods and services promised by the Department in the binding arrangement as a single performance obligation.

Example 11 Determining whether Goods or Services are Distinct

Case A—Distinct Goods or Services

IE57. A state government office (State Government, the transfer provider) enters into a binding arrangement with a government shared IT services agency (the Agency, the transfer recipient) for the Agency to transfer software licenses, perform installation services and provide unspecified software updates and technical support (online and telephone) to public sector universities (the Universities, the third-party beneficiaries) for a two-year period. The Agency provides the licenses, installation services and technical support separately. The installation service includes changing the web screen for each type of user (for example, teaching, marketing and information technology). The installation service is routinely performed by other entities and does not significantly modify the software. The software remains functional without the updates and the technical support.

IE58. The State Government assesses the goods and services promised by the Agency to determine which goods and services are distinct in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72). The State Government observes that the software is delivered before the other goods and services and remains functional without the updates and the technical support. The Universities can generate economic benefits or service potential from the updates together with the software license transferred at the start of the binding arrangement. Thus, the State Government concludes that the Universities can generate economic benefits or service potential from each of the goods and services either on their own or together with the other goods and services that are readily available and the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72) is met.

IE59. The State Government also considers the principle and the factors in paragraph 30 of [draft] IPSAS [X] (ED 72) and determines that the Agency’s promise to transfer each good and service to
the Universities is separately identifiable from each of the other promises (thus the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72) is met). In reaching this determination, the State Government considers that, although the Agency integrates the software into the Universities systems, the installation services do not significantly affect the Universities ability to use and generate economic benefits or service potential from the software license because the installation services are routine and can be obtained from alternative providers. The software updates do not significantly affect the Universities ability to use and benefit or receive service potential from the software license during the license period. The State Government further observes that none of the promised goods or services significantly modify or customize one another, nor is the Agency providing a significant service of integrating the software and the services into a combined output. Lastly, the State Government concludes that the software and the services do not significantly affect each other and, therefore, are not highly interdependent or highly interrelated, because the Agency would be able to fulfill its promise to transfer the initial software license independently from its promise to subsequently provide the installation service, software updates or technical support.

IE60. On the basis of this assessment, the State Government identifies four performance obligations of the Agency in the binding arrangement for the following goods or services:

(a) The software licenses;
(b) Installation services;
(c) Software updates; and
(d) Technical support.

IE61. The State Government applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether each of the Agency's performance obligations for the installation services, software updates and technical support are satisfied at a point in time or over time. The State Government also assesses the nature of the Agency's promise to transfer the software license in accordance with paragraph AG74 of [draft] IPSAS [X] (ED 72) (see Example 26 in paragraphs IE147–IE148).

Case B—Significant Customization

IE62. The promised goods and services are the same as in Case A, except that the binding arrangement specifies that, as part of the installation services, the software is to be substantially customized to add significant new functionality to enable the software to interface with other customized software applications used by the Universities. The customized installation service can be provided by other entities.

IE63. The State Government assesses the goods and services promised by the Agency to determine which goods and services are distinct in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72). The State Government first assesses whether the criterion in paragraph 28(a) has been met. For the same reasons as in Case A, the State Government determines that the software licenses, installations, software updates and technical support each meet that criterion. The State Government next assesses whether the criterion in paragraph 28(b) has been met by evaluating the principle and the factors in paragraph 30 of [draft] IPSAS [X] (ED 72). The State Government observes that the terms of the binding arrangement result in a promise by the Agency to provide a significant service of integrating the licensed software into the existing software systems by performing customized installation services as specified in the binding arrangement. In other words,
the Agency is using the license and the customized installation services as inputs to produce the combined output (i.e., functional and integrated software systems) specified in the binding arrangement (see paragraph 30(a) of [draft] IPSAS [X] (ED 72)). The software is significantly modified and customized by the service (see paragraph 30(b) of [draft] IPSAS [X] (ED 72)). Consequently, the State Government determines that the promise to transfer the license is not separately identifiable from the customized installation service and, therefore, the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72) is not met. Thus, the software licenses and the customized installation services are not distinct.

IE64. On the basis of the same analysis as in Case A, the State Government concludes that the software updates and technical support are distinct from the other promises in the binding arrangement.

IE65. On the basis of this assessment, the State Government identifies three performance obligations of the Agency in the binding arrangement for the following goods or services:

(a) Software customization (which comprises the licenses for the software and the customized installation services);

(b) Software updates; and

(c) Technical support.

IE66. The State Government applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether each of the Agency’s performance obligations is satisfied at a point in time or over time.

Case C—Promises are Separately Identifiable (Installation)

IE67. A state government office (State Government, the transfer provider) enters into a binding arrangement with a shared IT services agency (the Agency, the transfer recipient) for the Agency to provide a piece of equipment and installation services to a public sector university (the University, the third-party beneficiary). The equipment is operational without any customization or modification. The installation required is not complex and is capable of being performed by several alternative service providers.

IE68. The State Government identifies two promised goods and services in the binding arrangement: (a) equipment and (b) installation. The State Government assesses the criteria in paragraph 28 of [draft] IPSAS [X] (ED 72) to determine whether each promised good or service is distinct. The State Government determines that the equipment and the installation each meet the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72). The University can generate economic benefits or service potential from the equipment on its own, by using it or reselling it, or together with other readily available resources (for example, installation services available from alternative providers). The University also can generate economic benefits or service potential from the installation services together with other resources that the University will already have obtained from the Agency (i.e., the equipment).

IE69. The State Government further determines that the Agency’s promises to transfer the equipment and to provide the installation services are each separately identifiable (in accordance with paragraph 28(b) of [draft] IPSAS [X] (ED 72)). The State Government considers the principle and the factors in paragraph 30 of [draft] IPSAS [X] (ED 72) in determining that the equipment and the installation services are not inputs to a combined item in this binding arrangement. In this case, each of the factors in paragraph 30 of [draft] IPSAS [X] (ED 72) contributes to, but is not individually
Exposure Draft 72, Transfer Expenses

determinative of, the conclusion that the equipment and the installation services are separately identifiable as follows:

(a) The Agency is not providing a significant integration service. That is, the Agency has promised to deliver the equipment and then install it; the Agency would be able to fulfill its promise to transfer the equipment separately from its promise to subsequently install it. The Agency has not promised to combine the equipment and the installation services in a way that would transform them into a combined output.

(b) The Agency’s installation services will not significantly customize or significantly modify the equipment.

(c) Although the University can generate economic benefits or service potential from the installation services only after it has obtained control of the equipment, the installation services do not significantly affect the equipment because the Agency would be able to fulfill its promise to transfer the equipment independently of its promise to provide the installation services. Because the equipment and the installation services do not each significantly affect the other, they are not highly interdependent or highly interrelated.

IE70. On the basis of this assessment, the State Government identifies two performance obligations of the Agency in the binding arrangement for the following goods or services:

(a) The equipment; and

(b) Installation services.

IE71. The State Government applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether each performance obligation is satisfied at a point in time or over time.

Case D—Promises are Separately Identifiable (Restrictions to a Binding Arrangement)

IE72. Assume the same facts as in Case C, except that the State Government is required to ensure the University uses the Agency’s installation services in the binding arrangement.

IE73. The binding arrangement requirement to use the Agency’s installation services does not change the evaluation of whether the promised goods and services are distinct in this case. This is because the binding arrangement requirement to use the Agency’s installation services does not change the characteristics of the goods or services themselves, nor does it change the Agency’s promises to the State Government. Although the State Government is required to ensure the University uses the Agency’s installation services, the equipment and the installation services are capable of being distinct (i.e., they each meet the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72)) and the Agency’s promises to provide the equipment and to provide the installation services are each separately identifiable, i.e., they each meet the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72). The State Government’s analysis in this regard is consistent with that in Case C.

Case E—Promises are Separately Identifiable (Consumables)

IE74. A state government office (State Government, the transfer provider) enters into a binding arrangement with a shared IT services agency (the Agency, the transfer recipient) for the Agency to provide a piece of off-the-shelf equipment (i.e., the equipment is operational without any significant customization or modification) to a public sector university (the University, the third-party beneficiary) and to provide specialized consumables to the University for use in the equipment at
Exposure Draft 72, Transfer Expenses

IE75. The State Government determines that the University can generate economic benefits or service potential from the equipment together with the readily available consumables. The consumables are readily available in accordance with paragraph 29 of [draft] IPSAS [X] (ED 72), because they are regularly provided separately by the Agency (i.e., through refill orders to purchasers that previously purchased the equipment). The University can generate economic benefits or service potential from the consumables that will be delivered under the binding arrangement together with the delivered equipment that is transferred to the University initially under the binding arrangement. Therefore, the equipment and the consumables are each capable of being distinct in accordance with paragraph 28(a) of [draft] IPSAS [X] (ED 72).

IE76. The State Government determines that the Agency’s promises to transfer the equipment and to provide consumables over a three-year period are each separately identifiable in accordance with paragraph 28(b) of [draft] IPSAS [X] (ED 72). In determining that the equipment and the consumables are not inputs to a combined item in this binding arrangement, the State Government considers that the Agency is not providing a significant integration service that transforms the equipment and consumables into a combined output. In addition, neither the equipment nor the consumables are significantly customized or modified by the other. Lastly, the State Government concludes that the equipment and the consumables are not highly interdependent or highly interrelated because they do not significantly affect each other. Although the University can generate economic benefits or service potential from the consumables in this binding arrangement only after it has obtained control of the equipment (i.e., the consumables would have no use without the equipment) and the consumables are required for the equipment to function, the equipment and the consumables do not each significantly affect the other. This is because the Agency would be able to fulfill each of its promises in the binding arrangement independently of the other. That is, the Agency would be able to fulfill its promise to transfer the equipment even if the State Government did not purchase any consumables for the University and would be able to fulfill its promise to provide the consumables, even if the State Government acquired the equipment for the University separately.

IE77. On the basis of this assessment, the State Government identifies two performance obligations of the Agency in the binding arrangement for the following goods or services:

(a) The equipment; and
(b) The consumables.

IE78. The State Government applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether each performance obligation is satisfied at a point in time or over time.

Performance Obligations Satisfied Over Time (Step 5)

IE79. Example 12–Example 14 illustrate the requirements in paragraphs 35–37 and AG39–AG40 of IPSAS [X] (ED 72) on performance obligations satisfied over time. In addition, the following requirements are illustrated in these examples:
Exposure Draft 72, Transfer Expenses

(a) Paragraphs 35(a) and AG39–AG40 of IPSAS [X] (ED 72) on when a purchaser simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (Example 12 and Example 13); and

(b) Paragraphs 35(c), 36–37 and AG42–AG48 of IPSAS [X] (ED 72) on an entity’s performance that does not create an asset with an alternative use and an entity’s enforceable right to payment for performance completed to date (Example 13 and Example 14).

Example 12 Third-Party Beneficiary Simultaneously Receives and Consumes the Economic Benefits or Service Potential

IE80. A local government’s Department of Education (the Department, the transfer provider) enters into a binding arrangement with a public payroll service center (the Payroll Center, the transfer recipient) for the Payroll Center to provide monthly payroll processing services to the schools in the local government area (the Schools, the third-party beneficiaries) for one year.

IE81. The promised payroll processing services are accounted for as a single performance obligation in accordance with paragraph 23(b) of [draft] IPSAS [X] (ED 72). The performance obligation is satisfied over time in accordance with paragraph 35(a) of [draft] IPSAS [X] (ED 72) because the Schools simultaneously receive and consume the economic benefits or service potential of the Payroll Center’s performance in processing each payroll transaction as and when each transaction is processed. The fact that another entity would not need to re-perform payroll processing services for the service that the Payroll Center has provided to date also demonstrates that the Schools simultaneously receive and consume the economic benefits or service potential of the Payroll Center’s performance as the Payroll Center performs. (The Department disregards any practical limitations on transferring the remaining performance obligation, including setup activities that would need to be undertaken by another entity.) The Department recognizes expenses over time by measuring the Payroll Center’s progress towards complete satisfaction of that performance obligation in accordance with paragraphs 39–45 and AG49–AG51 of [draft] IPSAS [X] (ED 72).

Example 13 Assessing Alternative Use and Right to Payment

IE82. An international organization (the Organization, the transfer provider) enters into a binding arrangement with the Office of the Auditor General (the Auditor, the transfer recipient) for the Auditor to provide financial statement audit services to a national government (the Government, the third-party-beneficiary) that result in the Auditor providing an audit opinion to the Government. The audit opinion relates to the accounting records and other facts and circumstances that are specific to the Government. If the Organization were to terminate the audit for reasons other than the Auditor’s failure to perform as promised, the binding arrangement requires the Organization to compensate the Auditor for its costs incurred.

IE83. The Organization considers the criterion in paragraph 35(a) of [draft] IPSAS [X] (ED 72) and the requirements in paragraphs AG39 and AG40 of [draft] IPSAS [X] (ED 72) to determine whether the Government simultaneously receives and consumes the economic benefits or service potential of the Auditor’s performance. If the Auditor were to be unable to satisfy its obligation and the Organization hired another audit firm to provide the opinion, the other audit firm would need to substantially re-perform the work that the Auditor had completed to date, because the other audit firm would not have the economic benefits or service potential of any work in progress performed by the Auditor. The nature of the audit opinion is such that the Government will generate economic
benefits or service potential of the Auditor’s performance only when the Government receives the audit opinion. Consequently, the Organization concludes that the criterion in paragraph 35(a) of [draft] IPSAS [X] (ED 72) is not met.

IE84. However, the Auditor’s performance obligation meets the criterion in paragraph 35(c) of [draft] IPSAS [X] (ED 72) and is a performance obligation satisfied over time because of both of the following factors:

(a) In accordance with paragraphs 36 and AG42–AG44 of [draft] IPSAS [X] (ED 72), the development of the audit opinion does not create an asset with alternative use to the Auditor because the audit opinion relates to facts and circumstances that are specific to the Government. Therefore, Auditor cannot use the audit opinion for any other purpose.

(b) In accordance with paragraphs 37 and AG45–AG48 of [draft] IPSAS [X] (ED 72), the Auditor has an enforceable right to payment for its performance completed to date.

IE85. Consequently, the Auditor Organization recognizes revenue—an expense over time by measuring the Auditor’s progress towards complete satisfaction of the performance obligation in accordance with paragraphs 39–45 and AG49–AG51 of [draft] IPSAS [X]. (ED 72).

Example 14 Asset has no Alternative Use to the Transfer Recipient

IE86. The Department of Sciences (the Department, the transfer provider) enters into a binding arrangement with a supplier (the transfer recipient) to build a specialized piece of medical research equipment for a university (the third-party beneficiary). The supplier builds medical research equipment for various purchasers, such as government agencies and departments and commercial entities. The design and construction of each piece of medical research equipment differ substantially, on the basis of each purchaser’s needs and the type of technology that is incorporated into the equipment.

IE87. At the inception of the binding arrangement, the Department assesses whether the supplier’s performance obligation to build the medical research equipment is a performance obligation satisfied over time in accordance with paragraph 35 of [draft] IPSAS [X] (ED 72).

IE88. As part of that assessment, the Department considers whether the medical research equipment in its completed state will have an alternative use to the supplier. Although the binding arrangement does not preclude the supplier from directing the completed medical research equipment to another purchaser, the supplier would incur significant costs to rework the design and function of the equipment to direct that asset to another purchaser. Consequently, the asset has no alternative use to the supplier (see paragraphs 35(c), 36 and AG42–AG44 of [draft] IPSAS [X] (ED 72) because the purchaser-specific design of the medical research equipment limits the supplier’s practical ability to readily direct the equipment to another purchaser.

IE89. For the supplier’s performance obligation to be satisfied over time when building the medical research equipment, paragraph 35(c) of [draft] IPSAS [X] (ED 72) also requires the supplier to have an enforceable right to payment for performance completed to date. This condition is not illustrated in this example.
Measuring Progress Towards Complete Satisfaction of a Performance Obligation

IE90. Example 15 illustrates the requirements in paragraphs 39–45 of IPSAS [X] on measuring progress towards complete satisfaction of a performance obligation satisfied over time.

Example 15 Measuring Progress when the Transfer Recipient is Making Goods or Services Available

IE91. A local government (the transfer provider) enters into a binding arrangement with a sports facility (the transfer recipient) that owns and manages a public swimming pool to allow children under 12 years of age (the third-party beneficiaries) to access to the pool free of charge. The children have unlimited use of the pool. The local government promises to pay CU15,000 per month.

IE92. The local government determines that the sports facility’s promise is to provide a service of making the pool available for the children to use as and when the children wish. This is because the extent to which the children use the pool does not affect the amount of the remaining goods and services to which the children are entitled. The local government concludes that the children simultaneously receive and consume the benefits or service potential of the sports facility’s performance as it performs by making the pools available. Consequently, the sports facility’s performance obligation is satisfied over time in accordance with paragraph 35(a) of [draft] IPSAS [X] (ED 72).

IE93. The local government also determines that the children consume economic benefits or service potential from the sports facility making the pool available throughout the year. (That is, the children benefit from having the pools available, regardless of whether the children use it or not.) Consequently, the local government concludes that the best measure of progress towards complete satisfaction of the sports facility’s performance obligation over time is a time-based measure and it recognizes expenses on a straight-line basis throughout the year at CU15,000 per month.

Variable Consideration

IE94. Example 16 and Example 17 illustrate the requirements in paragraphs 50–54 of IPSAS [X] (ED 72) on identifying variable consideration.

Example 16 Penalty Gives Rise to Variable Consideration

IE95. The Department of Public Works (Public Works, the transfer provider) enters into a binding arrangement with a highway construction company (the transfer recipient) to build a highway for a provincial government (the third-party beneficiary) for CU10 million. In addition, the terms of the binding arrangement include a penalty of CU1 million if the construction is not completed within three months of a date specified in the binding arrangement.

IE96. Public Works concludes that the consideration promised in the binding arrangement includes a fixed amount of CU10 million and a variable amount of CU1 million (arising from the penalty).

IE97. Public Works estimates the variable consideration in accordance with paragraphs 50–54 of [draft] IPSAS [X] (ED 72) and considers the requirements in paragraphs 55–57 of [draft] IPSAS [X] (ED 72) on constraining estimates of variable consideration.

Example 17 Estimating Variable Consideration

IE98. The Department of Transportation (Transportation, the transfer provider) enters into a binding arrangement with the Department of Public Works (Public Works, the transfer recipient) a to build a bridge for a local government (the third-party beneficiary). The promise by Public Works to
transfer the bridge is a performance obligation that is satisfied over time. The promised consideration is CU25 million, but that amount will be reduced or increased depending on the timing of completion of the bridge. Specifically, for each day after March 31, 20X7 that the bridge is incomplete, the promised consideration is reduced by CU100,000. For each day before March 31, 20X7 that the bridge is complete, the promised consideration increases by CU100,000.

IE99. In addition, upon completion of the bridge, an independent inspector will assess the bridge and assign a rating based on metrics that are defined in the binding arrangement. If the bridge receives a specified rating, Public Works will be entitled to an incentive bonus of CU1.5 million.

IE100. In determining the transaction consideration, Transportation prepares a separate estimate for each element of variable consideration to which Public Works will be entitled using the estimation methods described in paragraph 53 of [draft] IPSAS [X] (ED 72):

IE101. Transportation decides to use the expected value method to estimate the variable consideration associated with the daily penalty or incentive (i.e., CU25 million, plus or minus CU100,000 per day). This is because it is the method that Transportation expects to better predict the amount of consideration to which it will be entitled.

IE102. Transportation decides to use the most likely amount to estimate the variable consideration associated with the incentive bonus. This is because there are only two possible outcomes (CU1.5 million or CU0) and it is the method that Transportation expects to better predict the amount of consideration to which it will be entitled.

IE103. Public Works considers the requirements in paragraphs 55–57 of [draft] IPSAS [X] (ED 72) on constraining estimates of variable consideration to determine whether it should include some or all of its estimate of variable consideration in the transaction price.

Constraining Estimates of Variable Consideration

IE104. Example 18 illustrates the requirements in paragraphs 55–57 of IPSAS [X] (ED 72) on constraining the estimates of variable consideration.

Example 18 Volume Discount Incentive

IE105. An international organization (the Organization, the transfer provider) enters into a binding arrangement with a private hospital (the Hospital, the transfer recipient) on January 1, 20X8 to provide medical examinations for refugees (the third-party beneficiaries) for CU100 per examination. If more than 10,000 examinations are performed in a calendar year, the binding arrangement specifies that the price per unit is retrospectively reduced to CU90 per unit. Consequently, the consideration in the binding arrangement is variable.

IE106. For the first quarter ended March 31, 20X8, the Hospital performs 750 examinations. The Organization estimates that the Hospital will not exceed the 10,000-examination threshold required for the volume discount in the calendar year.

IE107. The Organization considers the requirements in paragraphs 55–57 of [draft] IPSAS [X] (ED 72) on constraining estimates of variable consideration, including the factors in paragraph 56 of [draft] IPSAS [X] (ED 72). The Organization determines that it has significant experience with the medical examination and with the usage pattern of the refugees. Thus, the Organization concludes that it is probable that a significant reversal in the cumulative amount of expenses recognized (i.e., CU100
per unit) will not occur when the uncertainty is resolved (i.e., when the total amount of examinations is known). Consequently, the Organization recognizes expenses of CU75,000 (750 units × CU100 per unit) for the quarter ended March 31, 20X8.

IE108. In May 20X8, more refugees arrive in the country and in the second quarter ended June 30, 20X8 the Hospital performs an additional 5,000 examinations. In the light of the new fact, the Organization estimates that the number of examinations will exceed the 10,000-examination threshold for the calendar year and therefore the price per unit will be retrospectively reduced to CU90.

IE109. Consequently, the Organization recognizes expenses of CU442,500 for the quarter ended June 30, 20X8. That amount is calculated from CU450,000 for the sale of 5,000 units (5,000 units × CU90 per unit) less the change in transaction price of CU7,500 (750 units × CU10 price reduction) for the reduction of revenue relating to units provided for the quarter ended March 31, 20X8 (see paragraphs 85 and 86 of [draft] IPSAS [X] (ED 72).

The Existence of a Significant Financing Component in the Binding Arrangement

IE110. Example 19–Example 21 illustrate the requirements in paragraphs 59–64 of IPSAS [X] (ED 72) on the existence of a significant financing component in the binding arrangement.

Example 19 Withheld Payments on a Long-Term Binding Arrangement

IE111. A Department of Public Works (Public Works, the transfer provider) enters into a binding arrangement with a construction company (the Company, the transfer recipient) for the Company to construct a building for a local government (the third-party beneficiary) that includes scheduled milestone payments for the performance by the Company throughout the binding arrangement term of three years. The performance obligation will be satisfied over time and the milestone payments are scheduled to coincide with the Company’s expected performance. The binding arrangement provides that a specified percentage of each milestone payment is to be withheld (i.e., retained) by Public Works throughout the arrangement and paid to the Company only when the building is complete.

IE112. Public Works concludes that the binding arrangement does not include a significant financing component. The milestone payments coincide with the Company’s performance and the binding arrangement requires amounts to be retained for reasons other than the provision of finance in accordance with paragraph 61(c) of [draft] IPSAS [X] (ED 72). The withholding of a specified percentage of each milestone payment is intended to protect Public Works from the Company failing to adequately complete its obligations under the binding arrangement.

Example 20 Determining the Discount Rate

IE113. The Department of Communications and Information (the Department, the transfer provider) enters into a binding arrangement with a telecommunications company (Telcom, the transfer recipient) for Telcom to provide broadband internet equipment to a foreign government (the third-party beneficiary). Control of the equipment transfers to the foreign government when the binding arrangement is signed. The consideration stated in the binding arrangement is CU1 million plus a five per cent rate of interest in the binding arrangement, payable in 60 monthly instalments of CU18,871.
Case A—Discount Rate in the Binding Arrangement Reflects the Rate in a Separate Financing Transaction

IE114. In evaluating the discount rate in the binding arrangement that contains a significant financing component, the Department observes that the five per cent rate of interest in the binding arrangement reflects the rate that would be used in a separate financing transaction between the Department and Telcom at the inception of the binding arrangement (i.e., the rate of interest of five per cent in the binding arrangement reflects the credit characteristics of the Department).

IE115. The market terms of the financing mean that the cash price of the equipment is CU1 million. This amount is recognized as an expense and as a loan payable when control of the equipment transfers to the foreign country. The Department accounts for the payable in accordance with IPSAS 41, Financial Instruments.

Case B—Discount Rate in the Binding Arrangement does not Reflect the Rate in a Separate Financing Transaction

IE116. In evaluating the discount rate in the binding arrangement that contains a significant financing component, the Department observes that the five per cent rate of interest in the binding arrangement is significantly lower than the 12 per cent interest rate that would be used in a separate financing transaction between the Department and Telcom at the inception of the binding arrangement (i.e., the rate of interest in the binding arrangement of five per cent does not reflect the credit characteristics of the Department). This suggests that the cash price is less than CU1 million.

IE117. In accordance with paragraph 63 of [draft] IPSAS [X] (ED 72), the Department determines the transaction consideration by adjusting the promised amount of consideration to reflect the payments in the binding arrangement using the 12 per cent interest rate that reflects the credit characteristics of the Department. Consequently, the Department determines that the transaction consideration is CU848,357 (60 monthly payments of CU18,871 discounted at 12 per cent). The Department recognizes an expense and a loan payable for that amount. The Department accounts for the loan payable in accordance with IPSAS 41.

Example 21 Advance Payment and Assessment of Discount Rate

IE118. A government agency (the Agency) will hold an international summit in two years and needs to invest in vehicles for the event. At the conclusion of the event, the Agency plans to sell the surplus vehicles. To achieve this objective, the Agency (the transfer recipient) enters into a binding arrangement with a local government (the transfer provider) to provide a surplus vehicle to a not-for-profit organization (the Organization, the third-party beneficiary) in two years (i.e., the performance obligation will be satisfied at a point in time). The binding arrangement includes two alternative payment options: payment of CU50,000 in two years when the Organization obtains control of the asset or payment of CU40,000 when the binding arrangement is signed. The local government elects to pay CU40,000 when the binding arrangement is signed.

IE119. The local government concludes that the binding arrangement contains a significant financing component because of the length of time between when the local government pays for the vehicle and when the Agency transfers the vehicles to the Organization, as well as the prevailing interest rates in the market.
IE120. The interest rate implicit in the transaction is 11.8 per cent, which is the interest rate necessary to make the two alternative payment options economically equivalent. However, the local government determines that, in accordance with paragraph 63 of [draft] IPSAS [X] (ED 72), the rate that should be used in adjusting the promised consideration is six per cent, which reflects the credit characteristics of the Agency.

IE121. The following journal entries illustrate how the national government would account for the significant financing component:

(a) Recognize a transfer provider’s binding arrangement asset for the CU40,000 payment made at inception of the binding arrangement:

| Transfer provider’s binding arrangement asset | CU40,000 |
| Cash | CU40,000 |

(b) During the two years from inception of the binding arrangement until the transfer of the vehicle, the local government adjusts the promised amount of consideration (in accordance with paragraph 64 of [draft] IPSAS [X] (ED 72)) and accretes the binding arrangement asset by recognizing interest on CU40,000 at six per cent for two years:

| Transfer provider’s binding arrangement asset | CU4,940³ |
| Interest revenue | CU4,940 |

(c) Recognize an expense as the Agency transfers the asset:

| Expense | CU44,940 |
| Transfer provider’s binding arrangement asset | CU44,940 |

Allocating the Transaction Consideration to Performance Obligations (Step 4)

IE122. Example 22 and Example 23 illustrate the requirements in paragraphs 71–84 of IPSAS [X] (ED 72) on allocating the transaction consideration to performance obligations.

Example 22 Allocation Methodology

IE123. An international organization (the Organization, the transfer provider) enters into a binding arrangement with a vehicle manufacturer (the Manufacturer, the transfer recipient) to provide vehicles, specialized spare parts and specialized engines to a national government (the Government, the third-party beneficiary) in exchange for CU100 million. The Manufacturer will satisfy its performance obligations for each of the products at different points in time. The

³ CU4,940 = CU40,000 transfer provider’s binding arrangement asset × (6 per cent interest per year for two years) (rounded to the nearest CU10).
Manufacturer provides vehicles separately and therefore the stand-alone purchase price is directly observable. The stand-alone purchase prices of the specialized spare parts and specialized engines are not directly observable.

IE124. Because the stand-alone purchase prices for the specialized spare parts and specialized engines are not directly observable, the Organization must estimate them. To estimate the stand-alone purchase prices, the Organization uses the adjusted market assessment approach for the specialized spare parts and the specialized engines. In making those estimates, the Organization maximizes the use of observable inputs (in accordance with paragraph 76 of [draft] IPSAS [X]. The entity estimates the stand-alone prices as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-Alone Purchase Price (CU Millions)</th>
<th>Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicles</td>
<td>90</td>
<td>Directly observable (see paragraph 75 of [draft] IPSAS [X] (ED 72))</td>
</tr>
<tr>
<td>Specialized Spare Parts</td>
<td>10</td>
<td>Adjusted market assessment approach (see paragraph 77(a) of [draft] IPSAS [X] (ED 72))</td>
</tr>
<tr>
<td>Specialized Engines</td>
<td>20</td>
<td>Adjusted market assessment approach (see paragraph 77(a) of [draft] IPSAS [X] (ED 72))</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>120</strong></td>
<td></td>
</tr>
</tbody>
</table>

IE125. The Organization receives a discount for purchasing the bundle of goods because the sum of the stand-alone purchase prices (CU120 million) exceeds the transaction consideration (CU100 million). The Organization considers whether it has observable evidence about the Manufacturer's performance obligation to which the entire discount belongs (in accordance with paragraph 80 of [draft] IPSAS [X] (ED 72)) and concludes that it does not. Consequently, in accordance with paragraphs 74 and 79 of [draft] IPSAS [X] (ED 72), the discount is allocated proportionately across the vehicles, spare parts and the specialized engines. The discount, and therefore the transaction consideration, is allocated as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Allocated Transaction Consideration (CU Millions)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicles</td>
<td>75</td>
</tr>
<tr>
<td>Specialized Spare Parts</td>
<td>8</td>
</tr>
<tr>
<td>Specialized Engines</td>
<td>17</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>100</strong></td>
</tr>
</tbody>
</table>
Example 23 Allocating a Discount

IE126. A government procurement agency (the Agency, the transfer provider) regularly purchases common-use supplies, including Supplies A, B and C individually. The Agency establishes the following stand-alone prices:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-Alone Purchase Price (CU)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supply A</td>
<td>40</td>
</tr>
<tr>
<td>Supply B</td>
<td>55</td>
</tr>
<tr>
<td>Supply C</td>
<td>45</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>140</strong></td>
</tr>
</tbody>
</table>

IE127. In addition, the Agency regularly acquires Supplies B and C together for CU60.

Case A—Allocating a Discount to One or More Performance Obligations

IE128. The Agency enters into a binding arrangement with a supplier (the Supplier, the transfer recipient) for the Supplier to provide Supplies A, B and C to a not-for-profit organization (the Organization, the third-party beneficiary) in exchange for CU100. The Supplier will satisfy the performance obligations for each of the supplies at different points in time.

IE129. The binding arrangement includes a discount of CU40 on the overall transaction, which would be allocated proportionately to all three of the Supplier’s performance obligations when allocating the transaction consideration using the relative stand-alone purchase price method (in accordance with paragraph 79 of [draft] IPSAS [X] (ED 72). However, because the Agency regularly purchases Supplies B and C together for CU60 and Supply A for CU40, it has evidence that the entire discount should be allocated to the Supplier’s promises to transfer Supplies B and C to the Organization in accordance with paragraph 80 of [draft] IPSAS [X] (ED 72).

IE130. If the Supplier transfers control of Supplies B and C to the Organization at the same point in time, then the Agency could, as a practical matter, account for the transfer of those supplies as a single performance obligation. That is, the Agency could allocate CU60 of the transaction consideration to the single performance obligation and recognize an expense of CU60 when Supplies B and C simultaneously transfer to the Organization.

IE131. If the binding arrangement requires the Supplier to transfer control of Supplies B and C to the Organization at different points in time, then the allocated amount of CU60 is individually allocated to the Supplier’s promises to transfer Supply B (stand-alone purchase price of CU55) and Supply C (stand-alone purchase price of CU45) to the Organization as follows:
Case B—Residual Approach is Appropriate

IE132. The Agency enters into a binding arrangement with the Supplier for the Supplier to provide Products A, B and C to the Organization as described in Case A. The binding arrangement also includes a promise by the Supplier to transfer Product D to the Organization. Total consideration in the binding arrangement is CU130. The stand-alone purchase price for Product D is highly variable (see paragraph 77(b) of [draft] IPSAS [X]) because the Agency purchases Supply D from different suppliers for a broad range of amounts (CU15 – CU45). Consequently, the Agency decides to estimate the stand-alone purchase price of Product D using the residual approach.

IE133. Before estimating the stand-alone purchase price of Supply D using the residual approach, the Agency determines whether any discount should be allocated to the Supplier’s other performance obligations in the binding arrangement in accordance with paragraphs 80 and 81 of [draft] IPSAS [X] (ED 72).

IE134. As in Case A, because the Agency regularly purchases Supplies B and C together for CU60 and Supply A for CU40, it has observable evidence that CU100 should be allocated to those three supplies and a CU40 discount should be allocated to the Supplier’s promises to transfer Supplies B and C to the Organization in accordance with paragraph 80 of [draft] IPSAS [X] (ED 72). Using the residual approach, the Agency estimates the stand-alone price of Supply D to be CU30 as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Stand-Alone Purchase Price (CU)</th>
<th>Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supply A</td>
<td>40</td>
<td>Directly observable (see paragraph 75 of [draft] IPSAS [X] (ED 72)</td>
</tr>
<tr>
<td>Supplies B and C</td>
<td>60</td>
<td>Directly observable with discount (see paragraph 80 of [draft] IPSAS [X] (ED 72)</td>
</tr>
<tr>
<td>Supply D</td>
<td>30</td>
<td>Residual approach (see paragraph 77(b) of [draft] IPSAS [X] (ED 72)</td>
</tr>
<tr>
<td>Total</td>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>
IE135. The Agency observes that the resulting CU30 allocated to Supply D is within the range of its observable purchase prices (CU15–CU45). Therefore, the resulting allocation (see above table) is consistent with the allocation objective in paragraph 71 of [draft] IPSAS [X] (ED 72) and the requirements in paragraph 76 of [draft] IPSAS [X] (ED 72).

Case C—Residual Approach is Inappropriate

IE136. The same facts as in Case B apply to Case C except the transaction price is CU105 instead of CU130. Consequently, the application of the residual approach would result in a stand-alone price of CU5 for Supply D (CU105 transaction price less CU100 allocated to Supplies A, B and C). The Agency concludes that CU5 would not faithfully depict the amount of consideration which it expects to pay in exchange for the Supplier satisfying its performance obligation to transfer Supply D to the Organization, because CU5 does not approximate the stand-alone purchase price of Supply D, which ranges from CU15–CU45. Consequently, the Agency reviews its observable data to estimate the stand-alone price of Supply D using another suitable method. The Agency allocates the transaction price of CU105 to Supplies A, B, C and D using the relative stand-alone prices of those products in accordance with paragraphs 71–78 of [draft] IPSAS [X] (ED 72).

Purchaser Options for Additional Goods or Services

IE137. Example 24 illustrate the requirements in paragraphs AG58–AG62 of [draft] IPSAS [X] (ED 72) on purchaser options for additional goods or services.

Example 24 Option that Provides the Transfer Provider with a Material Right (Discount Voucher)

IE138. An international organization (the Organization, the transfer provider) enters into a binding arrangement with a publisher (the Publisher, the transfer recipient) for the Publisher to provide copies of Textbook A to the all the universities in a country (the Universities, the third-party beneficiaries) for CU100 per copy. As part of the binding arrangement, the Publisher gives the Organization a 40 per cent discount voucher for any future purchases of Textbook B (which would normally cost CU50) in the next 30 days. The Publisher has already announced an offer of a 10 per cent discount on all sales during the next 30 days as part of a promotion. The 10 per cent discount cannot be used in addition to the 40 per cent discount voucher.

IE139. Because all purchasers will receive a 10 per cent discount on purchases during the next 30 days, the only discount that provides the Organization with a material right is the discount that is incremental to that 10 per cent (i.e., the additional 30 per cent discount). The Organization accounts for the Publisher’s promise to provide the incremental discount as a performance obligation of the Publisher in the binding arrangement for the sale of Textbook A.

IE140. To estimate the stand-alone purchase price of the discount voucher in accordance with paragraph AG61 of [draft] IPSAS [X] (ED 72), the Organization estimates an 80 per cent likelihood that it will redeem the voucher and provide Textbook B to all the Universities. Consequently, the entity’s estimated stand-alone price of the discount voucher is CU12 per book (CU50 stand-alone purchase price of Textbook B × 30 per cent incremental discount × 80 per cent likelihood of exercising the option). The stand-alone purchase prices of Textbook A and the discount voucher and the resulting allocation of the CU100 transaction consideration are as follows:
IE141. The Organization allocates CU89 to Textbook A and recognizes an expense for Textbook A as the Publisher transfers the textbooks to the Universities. The Organization allocates CU11 to the discount voucher and recognizes an expense for the voucher when it redeems it for Textbook B or when it expires.

Non-refundable Upfront Fees

IE142. Example 25 illustrates the requirements in paragraphs AG66–AG68 of [draft] IPSAS [X] (ED 72) on non-refundable upfront fees.

Example 25 Non-refundable Upfront Fee

IE143. A provincial government (the Province, the transfer provider) enters into a binding arrangement with a leisure facility (the Facility, the transfer recipient) for the Facility to provide one year of access to its swimming pool for students at the local university (the Students, the third-party beneficiaries). The Facility's binding arrangements have standard terms that are the same for all group arrangements. The binding arrangement requires the customer to pay an upfront administration fee to set up eligible individuals (in this case the Students) on the Facility’s systems. The fee is a nominal amount per individual and is non-refundable. The Province can renew the binding arrangement each year without paying an additional fee for Students who continue to study at the university.

IE144. The Facility’s setup activities do not transfer a good or service to the individual and, therefore, do not give rise to a transfer recipient’s performance obligation.

IE145. The Province concludes that the renewal option does not provide it with a material right that it would not receive without entering into that binding arrangement (see paragraph AG59 of [draft] IPSAS [X] (ED 72)). The upfront fee is, in effect, an advance payment for the future transaction processing services. Consequently, the Province determines the transaction consideration, which includes the non-refundable upfront fee, and recognizes revenue—an expense for the transaction processing.
services as those services are provided in accordance with paragraph AG67 of [draft] IPSAS [X] (ED 72).

**Licensing**

**Example 26 Right to Use Intellectual Property**

IE147. Using the same facts as Case A of Example 11 (see paragraphs IE57–IE78), the State Government identifies four performance obligations of the Agency in a binding arrangement:

(a) The software license;
(b) Installation services;
(c) Software updates; and
(d) Technical support.

IE148. The State Government assesses the nature of the Agency’s promise to transfer the software license in accordance with paragraph AG74 of [draft] IPSAS [X] (ED 72). The State Government does not consider in its assessment of the criteria in paragraph AG74 of [draft] IPSAS [X] (ED 72) the Agency’s promise to provide software updates, because they result in the transfer of an additional good or service to the Universities (the third-party beneficiaries in Example 11) (see paragraph AG74(c) of [draft] IPSAS [X] (ED 72)). The State Government also observes that the Agency does not have any implied obligations (independent of the updates and technical support) to undertake activities that will change the functionality of the software during the license period. The State Government observes that the software remains functional without the updates and the technical support and, therefore, the ability of the Universities to obtain the economic benefits or service potential of the software is not substantially derived from, or dependent on, the Agency’s ongoing activities. The State Government therefore determines that the binding arrangement does not require, and it does not reasonably expect, the Agency to undertake activities that significantly affect the software (independent of the updates and technical support). The State Government concludes that the software to which the license relates has significant stand-alone functionality and none of the criteria in paragraph AG74 of [draft] IPSAS [X] (ED 72) are met. The State Government further concludes that the nature of the Agency’s promise in transferring the license to the Universities is to provide a right to use the Agency’s intellectual property as it exists at a point in time. Consequently, the State Government accounts for the license as a performance obligation satisfied at a point in time.

**Example 27 License of Intellectual Property**

IE149. The Department of Culture (the Department, the transfer provider) enters into a binding arrangement with a government film library (the Library, the transfer recipient) for the library to license (for a period of three years) a collection of films to a museum (the Museum, the third-party beneficiary) for display in an exhibition. The binding arrangement also specifies that the Museum will obtain any new films added to the collection by the Library during the licensing period. The updates are integral to the Museum’s ability to generate economic benefits or service potential from
the license during the license period, because the films relate to historical events which are considered relevant to current cultural views and public discourse.

IE150. The Department assesses the goods and services promised by the Library to the Museum to determine which goods and services are distinct in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72). The Department determines that the Museum can generate economic benefits or service potential from (a) the license on its own without the addition of the new films; and (b) the addition of the new films together with the initial license. Although the economic benefits or service potential that the Museum could obtain from the license on its own (i.e., without the additional films) is limited because the updates are integral to the Museum’s ability to continue to attract significantly more visitors, the license can be used in a way that generates some economic benefits or service potential. Therefore, the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72) is met for the license and the addition of new films.

IE151. The fact that the economic benefits or service potential that the Museum could obtain from the license on its own (i.e., without the addition of the new films) is limited (because the addition of the new films are integral to the Museum’s ability to attract more visitors) is also considered in assessing whether the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72) is met. Because the economic benefits or service potential that the Museum could obtain from the license over the three-year term without the additions would be significantly limited, the Library’s promises to grant the license and to provide the expected additions are, in effect, inputs that together fulfill a single promise of the Library to deliver a combined item to the Museum. That is, the nature of the Library’s promise in the binding arrangement is to provide ongoing access to the Library’s film collection for the three-year term of the binding arrangement. The promises within that combined item (i.e., to grant the license and to provide new films when-and-if-available) are, therefore, not separately identifiable in accordance with the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72).

IE152. The nature of the combined good or service that the Library promised to transfer to the Museum is ongoing access to the Library’s film collection for the three-year term of the binding arrangement. On the basis of this conclusion, the Department applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether single the Library’s performance obligation is satisfied at a point in time or over time. The Department concludes that because the Museum simultaneously receives and consumes the economic benefits or service potential of the Library’s performance as it occurs, the Library’s performance obligation is satisfied over time in accordance with paragraph 35(a) of [draft] IPSAS [X] (ED 72).

Example 28 Identifying a Distinct License

IE153. An international organization (the Organization, the transfer provider) enters into a binding arrangement with a university research facility (the Facility, the transfer recipient) to license the Facility’s patent rights to a laser surgery technology to a hospital in a developing country (the Hospital, the third-party beneficiary) for 10 years. The Facility also promises to manufacture the technology for the Hospital. Laser surgery technology in general is mature; therefore, the Facility will not undertake any activities to support the technology, which is consistent with its customary practices.
Case A—License is Not Distinct

IE154. In this case, no other entity can manufacture this technology because of the highly specialized nature of the manufacturing process. As a result, the license cannot be purchased separately from the manufacturing services.

IE155. The Organization assesses the goods and services promised to the clinic to determine which goods and services are distinct in accordance with paragraph 28 of [draft] IPSAS [X] (ED 72). The Organization determines that the Hospital cannot generate economic benefits or service potential from the license without the manufacturing service; therefore, the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72) is not met. Consequently, the license and the manufacturing service are not distinct and the Organization accounts for the license and the manufacturing service as a single performance obligation.

IE156. The Organization applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether the performance obligation (i.e., the bundle of the license and the manufacturing services) is a performance obligation satisfied at a point in time or over time.

Case B—License is Distinct

IE157. In this case, the manufacturing process used to produce the laser surgery technology is not unique or specialized and several other entities can also manufacture the technology for the Hospital.

IE158. The Organization assesses the goods and services promised to the Hospital to determine which goods and services are distinct, and it concludes that the criteria in paragraph 28 of [draft] IPSAS [X] (ED 72) are met for each of the license and the manufacturing service. The Organization concludes that the criterion in paragraph 28(a) of [draft] IPSAS [X] (ED 72) is met because the Hospital can generate economic benefits or service potential from the license together with readily available resources other than the Facility’s manufacturing service (because there are other entities that can provide the manufacturing service), and can generate economic benefits or service potential from the manufacturing service together with the license transferred to the Hospital at the start of the binding arrangement.

IE159. The Organization also concludes that the Facility’s promises to grant the license and to provide the manufacturing service are separately identifiable (i.e., the criterion in paragraph 28(b) of [draft] IPSAS [X] (ED 72) is met). The Organization concludes that the license and the manufacturing service are not inputs to a combined item in this binding arrangement on the basis of the principle and the factors in paragraph 28 of [draft] IPSAS [X] (ED 72). In reaching this conclusion, the Organization considers that the Hospital could separately purchase the license without significantly affecting its ability to generate economic benefits or service potential from the license. Neither the license, nor the manufacturing service, is significantly modified or customized by the other and the Facility is not providing a significant service of integrating those items into a combined output. The Organization further considers that the license and the manufacturing service are not highly interdependent or highly interrelated because the Facility would be able to fulfill its promise to transfer the license independently of fulfilling its promise to subsequently manufacture the laser for the Hospital. Similarly, the Facility would be able to manufacture the laser for the Hospital even if the Hospital had previously obtained the license and initially utilized a different manufacturer. Thus, although the manufacturing service necessarily depends on the license in this contract (i.e., the Facility would not provide the manufacturing service without the clinic having obtained the license),

117
the license and the manufacturing service do not significantly affect each other. Consequently, the Organization concludes that its promises to grant the license and to provide the manufacturing service are distinct and that there are two transfer recipient’s performance obligations:

(a) License of patent rights; and
(b) Manufacturing service.

IE160. The Organization assesses, in accordance with paragraph AG74 of [draft] IPSAS [X] (ED 72), the nature of the Facility’s promise to grant the license. The laser technology is a mature product (i.e., it has been approved, is currently being manufactured and has been provided at a surplus for the last several years). For these types of mature products, the Facility’s customary practices are not to undertake any activities to support the laser technology. The technology has significant stand-alone functionality (i.e., its ability to be used in a way that treats a disease or condition). Consequently, the Hospital obtains a substantial portion of the economic benefits or service potential of the laser technology from that functionality, rather than from the Facility’s ongoing activities. The Organization concludes that the criteria in paragraph AG74 of [draft] IPSAS [X] (ED 72) are not met because the binding arrangement does not require, and the binding arrangement does not reasonably expect, the Facility to undertake activities that significantly affect the intellectual property to which the Hospital has rights. In its assessment of the criteria in paragraph AG74 of [draft] IPSAS [X] (ED 72), the Organization does not take into consideration the Facility’s separate performance obligation of promising to provide a manufacturing service. Consequently, the nature of the Facility’s promise in transferring the license is to provide a right to use the Facility’s intellectual property in the form and the functionality with which it exists at the point in time that it is granted to the clinic. Consequently, the Organization accounts for the license as a performance obligation satisfied at a point in time.

IE161. The Facility applies paragraphs 32–38 of [draft] IPSAS [X] (ED 72) to determine whether the manufacturing service is a performance obligation satisfied at a point in time or over time.

Bill-and-Hold Arrangements

IE162. Example 29 illustrates the requirements in paragraphs AG83–AG86 of [draft] IPSAS [X] (ED 72) on bill-and-hold arrangements.

Example 29 Bill-and-Hold Arrangement

IE163. An education department (the Department, the transfer provider) enters into a binding arrangement with a publisher (the Publisher, the transfer recipient) on January 1, 20X8 for the Publisher to provide two consignments of textbooks to a not-for-profit education charity (the Charity, the third-party beneficiary), each relating to a different educational symposium for disadvantaged children. The publishing lead time for the textbooks is one year.

IE164. Upon completion of textbooks, the Publisher demonstrates that the textbooks meet the agreed-upon specifications in the binding arrangement. The Publisher’s promises to transfer the two consignments of textbooks are distinct and result in two performance obligations that each will be satisfied at a point in time. On December 31, 20X8, the Department pays for both consignments of textbooks, but only the first consignment of textbooks is physically transferred to the Charity, as the symposium relating to the second consignment is not scheduled to occur for another two years. Although the Charity inspects and accepts the second consignment of textbooks, the Department
requests that the second consignment be stored at the Publisher’s warehouse for two years due to better security at their premises. The Charity has legal title to the second consignment of textbooks and the textbooks can be identified as belonging to the Charity. Furthermore, the Publisher stores the second consignment of textbooks in a separate section of its warehouse and the textbooks are ready for immediate shipment at the Charity’s request. The Publisher expects to hold the second consignment of textbooks for up to two years and the Publisher does not have the ability to use the second consignment of textbooks or direct them to another purchaser.

IE165. The Department identifies the Publisher’s promise to provide custodial services as a performance obligation because it is a service provided to the Charity and it is distinct from the two consignments of textbooks. Consequently, the Department accounts for three performance obligations in the binding arrangement (the Publisher’s promises to provide the two consignments of textbooks and the custodial services). The transaction consideration is allocated to the three performance obligations and expenses are recognized when (or as) control transfers to the Charity.

IE166. Control of the first consignment of textbooks transfers to the Charity on December 31, 20X8 when the Charity takes physical possession. The Department assesses the indicators in paragraph 38 of [draft] IPSAS [X] (ED 72) to determine the point in time at which control of the second consignment of textbooks transfers to the Charity, noting that the Publisher has received payment, the Charity has legal title to the second consignment of textbooks, and the Charity has inspected and accepted the second consignment. In addition, the Department concludes that all of the criteria in paragraph AG85 of [draft] IPSAS [X] (ED 72) are met, which is necessary for the Department to recognize an expense in a bill-and-hold arrangement. The Department recognizes an expense for the second consignment of textbooks on December 31, 20X8 when control transfers to the Charity.

IE167. The Publisher’s performance obligation to provide custodial services is satisfied over time as the services are provided to the Charity. The Department considers whether the payment terms include a significant financing component in accordance with paragraphs 59–64 of [draft] IPSAS [X] (ED 72).

Transfer Expenses without Performance Obligations

Recognition and Measurement

Example 30 Transfer of Resources to Another Level of Government for General Purposes

IE169. A national government (the transfer provider) makes a transfer of CU10 million to a local government in a socioeconomically deprived area. The local government (the transfer recipient) is required under its constitution to undertake various social programs; however, it has insufficient resources to undertake all of these programs without assistance. The are no enforceable activities or eligible expenditure requirements imposed on the local government by the transfer.

IE170. The transfer does not confer enforceable rights and obligations on both parties to the agreement, and therefore is not a binding arrangement as defined in [draft] IPSAS [X] (ED 70). In the absence
of a binding arrangement, the national government recognizes an expense when it transfers the CU10 million to the local government in accordance with paragraph 92 of [draft] IPSAS [X] (ED 72).

Example 31 Transfer of Resources with an Enforceable Activity and/or Eligible Expenditure

IE171. A national government (the transfer provider) enters into an agreement with a social housing entity (the transfer recipient) to make a cash transfer of CU50 million to the social housing entity. The agreement specifies that the social housing entity must:

(a) Increase the stock of social housing by an additional 1,000 units over and above any other planned increases; or

(b) Use the cash transfer in other ways to support its social housing objectives.

If neither of these requirements is satisfied, the social housing entity must return the cash to the national government.

IE172. The agreement requires the social housing entity to either undertake an enforceable activity (increase the social housing stock) or incur eligible expenditure (use the cash transfer to support social housing objectives) as defined in [draft] IPSAS [X] (ED 71). The transfer agreement confers enforceable rights and obligations on both parties to the agreement, and a binding arrangement as defined in [draft] IPSAS [X] (ED 70).

IE173. Consequently, the national government recognizes an expense at the earlier of the point at which it has a present obligation to transfer the CU50 million or the point at which it transfers the CU50 million, in accordance with paragraph 90 of [draft] IPSAS [X] (ED 72). The national government does not recognize an asset for the possible return of the funds, as this is not a resource currently controlled by the national government. Any return of the funds is conditional on a future event, the future non-compliance with the terms of the binding arrangement by the provincial government.

Example 32 Transfer to Another Level of Government with Specific Requirements

IE174. The national government (the transfer provider) enters into an agreement with a provincial government (the transfer recipient) to transfer CU10 million to the provincial government to be used to improve and maintain mass transit systems. Specifically, the provincial government is required to use the money as follows:

(a) 40 percent for existing railroad and tramway system modernization;

(b) 40 percent for new railroad or tramway systems; and

(c) 20 percent for rolling stock purchases and improvements.

IE175. Under the terms of the agreement, the money must be spent as specified in the current year or be returned to the national government.

IE176. The agreement is a binding arrangement that imposes requirements on the provincial government to undertake enforceable activities and incur eligible expenditure, as defined in [draft] IPSAS [X] (ED 71). Consequently, the national government recognizes an expense at the earlier of the point at which it has a present obligation to transfer the CU10 million or the point at which it transfers the CU10 million, in accordance with paragraph 90 of [draft] IPSAS [X] (ED 72). The national government does not recognize an asset for the possible return of the funds, as this is not a
resource currently controlled by the national government. Any return of the funds is conditional on a future event, the future non-compliance with the terms of the binding arrangement by the provincial government.

*Example 33 Debt Forgiveness*

IE177. The national government (the transfer provider) had previously lent a local government (the transfer recipient) CU20 million. The loan was provided to enable the local government to build a water treatment plant. The national government has accounted for the loan in accordance with IPSAS 41.

IE178. After a change in policy, the national government decides to forgive the loan. There are no requirements attached to the forgiveness of the loan. The national government writes to the local government and advises it of its decision; it also encloses the loan documentation, which has been annotated to the effect that the loan has been waived.

IE179. In accordance with paragraphs 94 and 115 of [draft] IPSAS [X] (ED 72), the national government recognizes an expense at the point it waives the loan, and measures the expense at the carrying amount of the loan (measured in accordance with IPSAS 41). The national government applies IPSAS 41 to derecognize the loan.

*Example 34 Agreement for a Series of Transfers*

IE180. A regional government (the transfer provider) enters into a binding arrangement with a museum on January 1, 20X1, whereby the regional government will provide CU100,000 per year for three years for the museum to purchase additional artefacts.

**Case A—Future Payments Dependent on Performance**

IE181. The binding arrangement requires the regional government to transfer CU100,000 to the museum on January 31, 20X1. The binding agreement also requires the regional government to transfer CU100,000 to the museum on January 31, 20X2 and January 31, 20X3 provided that the museum has acquired the artefacts in the previous year.

IE182. On January 31, 20X1, the regional government reviews the binding arrangement, and concludes that it has a present obligation for the CU100,000 due on January 31, 20X1. It recognizes an expense at that point in accordance with paragraph 96 of [draft] IPSAS [X] (ED 72). The regional government also concludes that it does not have a present obligation for the remaining payments at that point, as these are conditional on the future performance of the museum. Consequently, in accordance with paragraph 96 of [draft] IPSAS [X] (ED 72), the regional government does not recognize an expense for those payments as at January 31, 20X1, but will recognize expenses in future when the obligations to make the payments become present obligations (or when if makes the future payments, if this is earlier).

**Case B—Future Payments Due in All Circumstances**

IE183. The binding arrangement requires the regional government to transfer CU100,000 to the museum on January 31, 20X. The binding agreement also requires the regional government to transfer CU100,000 to the museum on January 31, 20X2 and January 31, 20X3. The binding arrangement requires the regional government to make the future payments irrespective of whether the museum has acquired the intended artefacts or not.
IE184. On January 31, 20X1, the regional government reviews the binding arrangement, and concludes that it has a present obligation for all three payments of CU100,000 as at January 31, 20X1, as the regional government is unable to avoid an outflow of resources. It recognizes an expense for CU300,000 at that point, in accordance with paragraph 96 of [draft] IPSAS [X] (ED 72).

Example 35 Agreement for Transfers Subject to Approval of Appropriations

IE185. A national government has a financial year end of December 31. On December 15, 20X2, the national government (the transfer provider) enters into a binding arrangement with a local government (the transfer recipient) to transfer CU5 million to the local government, to be used to reduce air pollution, in accordance with the national government’s policy.

IE186. The binding arrangement includes a term that it is subject to an appropriation being approved. In determining the effect of the term that the binding arrangement is subject to an appropriation being approved, the national government considers substance over form, in accordance with paragraphs 97–98 and AG96–AG100.

Case A—Appropriation is in Substance a Limitation

IE187. Legislation requires the national government to have an approved appropriation for all expenditure prior to the expenditure being incurred. Incurring expenditure prior to approval being given is unlawful, and disciplinary action may be taken against ministers or officials who incur expenditure without an approved appropriation.

IE188. The national government concludes that it is prohibited from transferring the CU5 million unless and until the appropriation is approved. Consequently, the limitation (that the transfer is subject to the appropriation being approved) has substance and, in accordance with paragraphs 97–98 and AG96–AG100, the national government does not recognize a liability and an expense as at December 15, 20X2. As at December 31, 20X2, its financial year end, the appropriation has not been approved, and the national government considers whether to disclose the binding arrangement as a contingent liability (see Example 41).

IE189. On January 15, 20X3, the Parliament approves the appropriation. At this date, the national government applies paragraphs 90–96 in determining when to recognize an expense.

Case B—Appropriation is not in Substance a Limitation

IE190. Legislation gives the national government wide discretionary powers to provide transfers to lower levels of government. While the legislation requires the national government to seek confirmation of such transfers by means of an appropriation, the national government is permitted to transfer funds prior to the appropriation being approved. The approval of the appropriation by the Parliament is seen as a formality, and does not impact the national government’s spending decisions.

IE191. The national government concludes that it is not prohibited from transferring the CU5 million prior to the appropriation being approved. Consequently, the limitation (that the transfer is subject to the appropriation being approved) does not have substance. As at December 15, 20X2, the national government applies paragraphs 90–96 in determining when to recognize an expense.
Example 36 Taxes Paid and Payable

Case A—Property Taxes Levied Progressively

IE192. A national government (the transfer provider) has an annual reporting period that ends on December 31. In accordance with legislation, a property tax (payable to a municipality, the transfer recipient) is triggered progressively as an entity occupies property in 20X1. The amount of the property tax is calculated by reference to the value of the property and the number of days the property is occupied by the national government in 20X1.

IE193. The liability is recognized progressively during 20X1 as the national government occupies the property, because the obligating event, as identified by the legislation, is the number of days the property is occupied during 20X1. At any point in 20X1, the national government has a present obligation to pay the property tax on the number of days it has occupied the property to date. The national government has no present obligation to pay a property tax that will arise from occupying the property in the future.

Case B—A Tax is Triggered in Full as Soon as the Entity Incurs Expenditure on Alcohol

IE194. A university (the transfer provider), which operates a bar, has an annual reporting period that ends on December 31. In accordance with legislation, a tax (payable to the national government, the transfer recipient) is triggered in full as soon as an entity incurs expenditure on alcohol in 20X1. The amount of the tax is calculated by reference to the expenditure on alcohol incurred by the entity in 20X0. The university incurred expenditure on alcohol in 20X0 and in 20X1 starts to incur expenditure on alcohol on January 3, 20X1.

IE195. The liability is recognized in full on January 3, 20X1 because the obligating event, as identified by the legislation, is the first incurring of expenditure in 20X1. The incurring of expenditure in 20X0 is necessary, but not sufficient, to create a present obligation to pay the tax. Before January 3, 20X1, the university has no present obligation to pay the tax. In other words, the activity that triggers the payment of the tax, as identified by the legislation, is the point at which the university first incurs expenditure on alcohol in 20X1. The incurring of expenditure on alcohol in 20X0 is not the activity that triggers the payment of the tax and the recognition of the liability. The amount of expenditure on alcohol incurred in 20X0 only affects the measurement of the liability.

Case C—A Tax is Triggered in Full if the Entity Operates a Landfill Facility at a Specified Date

IE196. A local government (the transfer provider) has an annual reporting period that ends on December 31. In accordance with legislation, a tax (payable to the national government, the transfer recipient) is triggered in full only if an entity operates a landfill facility at the end of the annual reporting period. The amount of the levy is calculated by reference to the amounts in the statement of financial position of the entity at the end of the annual reporting period. The local government’s annual reporting period ends on December 31, 20X1.

IE197. The liability is recognized on December 31, 20X1 because the obligating event, as identified by the legislation, is the local government operating a landfill facility at the end of the annual reporting period. Before that point, the local government has no present obligation to pay the tax, even if it is compelled, economically or by legislation, to continue to operate a landfill facility in the future. In other words, the activity that triggers the payment of the tax, as identified by the legislation, is the entity operating a landfill facility at the end of the annual reporting period, which does not occur until
December 31, 20X1. The conclusion would not change even if the amount of the liability is based on the length of the reporting period, because the obligating event is the local government operating a landfill facility at the end of the annual reporting period.

Case D—A Tax is Triggered if the Entity Generates Revenue above a Minimum Amount of Revenue

IE198. A university (the transfer provider) has an annual reporting period that ends on December 31. In accordance with legislation, a tax (payable to the Department of Education) is triggered if a university generates revenue above CU50 million in 20X1. The Department’s policy is to support smaller universities by not charging the tax on revenue below CU50 million. The amount of the tax is calculated by reference to revenue generated above CU50 million, with the tax rate at 0 percent for the first CU50 million revenue generated (below the threshold) and 2 percent above CU50 million revenue. The university’s revenue reaches the revenue threshold of CU50 million on July 17, 20X1.

IE199. In this example, the liability is recognized between July 17, 20X1 and December 31, 20X1 as the university generates revenue above the threshold because the obligating event, as identified by the legislation, is the activity undertaken after the threshold is reached (i.e., the generation of revenue after the threshold is reached). The amount of the liability is based on the revenue generated to date that exceeds the threshold of CU50 million revenue.

Case E—A Tax is Triggered if the Entity Generates Revenue above a Minimum Amount of Revenue: Variation

IE200. The same fact pattern as in Case D (i.e., a levy is triggered if the university generates revenue above CU50 million in 20X1) applies, except that the amount of the levy is calculated by reference to all revenue generated by the university in 20X1 (i.e., including the first CU50 million revenue generated in 20X1).

IE201. In this example, the liability for the payment of the levy related to the first CU50 million revenue is recognized on July 17, 20X1 when the threshold is met, because the obligating event, as identified by the legislation, for the payment of that amount is the reaching of the threshold. The liability for the payment of the levy related to revenue generated above the threshold is recognized between July 17, 20X1 and December 31, 20X1 as the entity generates revenue above the threshold, because the obligating event, as identified by the legislation, is the activity undertaken after the threshold is reached (i.e., the generation of revenue after the threshold is reached). The amount of the liability is based on the revenue generated to date, including the first CU50 million revenue.

Presentation

IE202. Example 37 and Example 38 illustrate the requirements in paragraphs 120–124 of [draft] IPSAS [X] (ED 72) on the presentation of binding arrangement balances under the public sector performance obligation approach.

Example 37 Transfer Provider’s Binding Arrangement Asset

Case A—Cancellable Binding Arrangement

IE203. On January 1, 20X9, a government procurement agency (the Agency, the transfer provider) enters into a binding arrangement that is cancellable with a supplier (the Supplier, the transfer recipient) to transfer a product to a local government (the third-party beneficiary) on March 31, 20X9. The
binding arrangement requires Agency to pay consideration of CU1,000 in advance on January 31, 20X9. The Agency pays the consideration on March 1, 20X9. The Supplier transfers the product on March 31, 20X9. The following journal entries illustrate how the entity accounts for the binding arrangement:

(a) The Agency pays cash of CU1,000 on March 1, 20X9 (cash is received in advance of performance):

\[
\begin{align*}
\text{Transfer provider’s binding arrangement asset} & \quad \text{CU1,000} \\
\text{Cash} & \quad \text{CU1,000}
\end{align*}
\]

(b) The Agency satisfies the performance obligation on March 31, 20X9:

\[
\begin{align*}
\text{Expense} & \quad \text{CU1,000} \\
\text{Transfer provider’s binding arrangement asset} & \quad \text{CU1,000}
\end{align*}
\]

Case B—Non-Cancellable Binding Arrangement

IE204. The same facts as in Case A apply to Case B except that the binding arrangement is non-cancellable. The following journal entries illustrate how the Agency accounts for the binding arrangement:

(a) The amount of consideration is due on January 31, 20X9 (which is when the Agency recognizes a payable because it has a present obligation to make the payment and the Supplier has an unconditional right to consideration):

\[
\begin{align*}
\text{Transfer provider’s binding arrangement asset} & \quad \text{CU1,000} \\
\text{Payable} & \quad \text{CU1,000}
\end{align*}
\]

(b) The Agency pays the cash on March 1, 20X9:

\[
\begin{align*}
\text{Payable} & \quad \text{CU1,000} \\
\text{Cash} & \quad \text{CU1,000}
\end{align*}
\]

(c) The Agency satisfies the performance obligation on March 31, 20X9:

\[
\begin{align*}
\text{Expense} & \quad \text{CU1,000} \\
\text{Transfer provider’s binding arrangement asset} & \quad \text{CU1,000}
\end{align*}
\]
IE205. If the Agency received the invoice before January 31, 20X9 (the due date of the consideration), the Agency would not present the transfer provider’s binding arrangement asset and the payable on a gross basis in the statement of financial position because the Agency does not at that point have a present obligation.

Example 38 Transfer Provider’s Binding Arrangement Liability Recognized for the Transfer Recipient’s Performance

IE206. On January 1, 20X8, a government education department (Education, the transfer provider) enters into a binding arrangement with an IT supplier (the Supplier, the transfer recipient) for the supplier to transfer computer software and configuration services to a small government department (the Department, the third-party beneficiary) in exchange for CU1,000. The binding arrangement requires the software to be delivered first and states that payment for the delivery of the software is conditional on configuration. In other words, the consideration of CU1,000 is due only after the Supplier has transferred both the software and configuration services to the Department. Consequently, Education does not have a present obligation (a payable) until the software is transferred to the Department and configured.

IE207. Education identifies the Supplier’s promises to transfer the software and complete the configuration as separate performance obligations and allocates CU400 to the performance obligation to transfer the software and CU600 to the performance obligation to complete the configuration on the basis of their relative stand-alone prices. Education recognizes an expense for each respective performance obligation when control of the product transfers to the Department.

(a) The Supplier satisfies the performance obligation to transfer the software:

<table>
<thead>
<tr>
<th>Expense</th>
<th>CU400</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transfer provider’s binding arrangement liability</td>
<td>CU400</td>
</tr>
</tbody>
</table>

(b) The Supplier satisfies the performance obligation to configure the software. The Supplier has the unconditional right to consideration, and Education has a present obligation to make payment:

<table>
<thead>
<tr>
<th>Expense</th>
<th>CU600</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transfer provider’s binding arrangement liability</td>
<td>CU400</td>
</tr>
</tbody>
</table>

Payable | CU1,000 |

Disclosure

Transfer Expenses with Performance Obligations

IE208. Example 39 and Example 40 illustrate the requirements in paragraphs 132–135 of [draft] IPSAS [X] (ED 72) for the disclosure of transaction consideration allocated to the remaining transfer recipient’s performance obligations under the public sector performance obligation approach. In addition, the
requirements of paragraph 56 of [draft] IPSAS [X] (ED 72) on constraining estimates of variable consideration are illustrated in Example 39:

**Example 39 Disclosure of the Transaction Consideration Allocated to the Transfer Recipient’s Remaining Performance Obligations**

IE209. On June 30, 20X7, a centralized training agency (the Agency, the transfer provider) enters into three binding arrangements (Binding Arrangements A, B and C) with a training company (the Company, the transfer recipient) for the Company to provide training services to three not-for-profit organizations (Organizations X, Y and Z, the third-party beneficiaries). Each binding arrangement has a two-year non-cancellable term. The Agency considers the requirements in paragraphs 132–133 of [draft] IPSAS [X] (ED 72) in determining the information in each binding arrangement to be included in the disclosure of the transaction price allocated to the remaining performance obligations at December 31, 20X7.

**Binding Arrangement A**

IE210. The Company provides training services to Organization X over the next two years typically at least once per month. For services provided, the Agency pays an hourly rate of CU25. The Agency estimates that the Company provides an average of eight hours of training per month, and the total transaction consideration is based on this estimate. The Agency measures the Company’s progress towards complete satisfaction of the performance obligation using an output method (the number of hours of training received by Organization X).

IE211. The Agency discloses the amount of the transaction consideration that has not yet been recognized as an expense in a table with quantitative time bands that illustrates when the Agency expects to recognize the amount as an expense. The information for Binding Arrangement A included in the overall disclosure is as follows:

<table>
<thead>
<tr>
<th></th>
<th>20X8</th>
<th>20X9</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Expenses</td>
<td>CU</td>
<td>CU</td>
<td>CU</td>
</tr>
<tr>
<td>incurred on</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Binding</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Arrangement A</td>
<td>2,400</td>
<td>1,200</td>
<td>3,600</td>
</tr>
</tbody>
</table>

**Binding Arrangement B**

IE212. Training services are to be provided by the Company to Organization Y as and when needed with a maximum of four visits per month over the next two years. The Agency pays a fixed price of CU400 per month for both services. The Agency measures the Company’s progress towards complete satisfaction of the performance obligation using a time-based measure.

IE213. The Agency discloses the amount of the transaction consideration that has not yet been recognized as an expense in a table with quantitative time bands that illustrates when the Agency expects to recognize the amount as an expense.

---

4 8 hours training per month x CU25/hour x 12 months

5 8 hours training per month x CU25/hour x 6 months
recognize the amount as an expense. The information for Binding Arrangement B included in the overall disclosure is as follows:

<table>
<thead>
<tr>
<th></th>
<th>20X8</th>
<th>20X9</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU</td>
<td>CU</td>
<td>CU</td>
<td></td>
</tr>
<tr>
<td>Expenses expected to be incurred on Binding Arrangement B as of 31 December 20X7</td>
<td>4,800</td>
<td>2,400</td>
<td>7,200</td>
</tr>
</tbody>
</table>

**IE214.** Training services are to be provided by the Company to Organization Z as and when needed over the next two years. The Agency pays fixed consideration of CU100 per month plus a one-time variable consideration payment ranging from CU0–CU1,000 corresponding to a one-time regulatory review and certification of Organization Z’s employees (i.e., a performance bonus). The Agency estimates that the Company will be entitled to CU750 of the variable consideration. On the basis of the Agency’s assessment of the factors in paragraph 56 of [draft] IPSAS [X] (ED 72), the Agency includes its estimate of CU750 of variable consideration in the transaction consideration because it is probable that a significant reversal in the amount of cumulative expenses recognized will not occur. The Agency measures the Company’s progress towards complete satisfaction of the performance obligation using a time-based measure.

**IE215.** The Agency discloses the amount of the transaction consideration that has not yet been recognized as an expense in a table with quantitative time bands that illustrates when the Agency expects to recognize the amount as an expense. The Agency also includes a qualitative discussion about any significant variable consideration that is not included in the disclosure. The information for Binding Arrangement C included in the overall disclosure is as follows:

<table>
<thead>
<tr>
<th></th>
<th>20X8</th>
<th>20X9</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU</td>
<td>CU</td>
<td>CU</td>
<td></td>
</tr>
<tr>
<td>Expenses expected to be incurred on Binding Arrangement C as of 31 December 20X7</td>
<td>1,575</td>
<td>788</td>
<td>2,363</td>
</tr>
</tbody>
</table>

**IE216.** In addition, in accordance with paragraph 135 of [draft] IPSAS [X] (ED 72), the Agency discloses qualitatively that part of the performance bonus has been excluded from the disclosure because it was not included in the transaction consideration. That part of the performance bonus was excluded

---

6  CU400 x 12 months

7  CU400 x 6 months

8  Transaction price = CU3,150 (CU100 × 24 months + CU750 variable consideration) recognized evenly over 24 months at CU1,575 per year.

9  CU1,575 ÷ 2 = CU788 (i.e., for 6 months of the year)
from the transaction consideration in accordance with the requirements for constraining estimates of variable consideration.

**Example 40 Disclosure of the Transaction Consideration Allocated to the Transfer Recipient’s Remaining Performance Obligations—Qualitative Disclosure**

IE217. On January 1, 20X2, the Department of Public Works (Public Works, the transfer provider) enters into a binding arrangement with a State-Owned Enterprise (SOE, the transfer recipient) to refurbish a building for a local authority school (the School, the third-party beneficiary) for fixed consideration of CU10 million. The refurbishment of the building is considered a single performance obligation that SOE satisfies over time. As of December 31, 20X2, Public Works has recognized CU3.2 million of expenses. Public Works estimates that the refurbishment will be completed in 20X3, but it is possible that the project will be completed in the first half of 20X4.

IE218. At 31 December 20X2, Public Works discloses the amount of the transaction consideration that has not yet been recognized as an expense in its disclosure of the transaction consideration allocated to SOE’s remaining performance obligations. Public Works also discloses an explanation of when it expects to recognize that amount as an expense. The explanation can be disclosed either on a quantitative basis using time bands that are most appropriate for the duration of the remaining transfer recipient’s performance obligation or by providing a qualitative explanation. Because Public Works is uncertain about the timing of the expense recognition, the entity discloses this information qualitatively as follows:

> ‘As of December 31, 20X2, the aggregate amount of the transaction consideration allocated to SOE’s remaining performance obligation is CU6.8 million and the entity will recognize this as an expense as the building is completed, which is expected to occur over the next 12–18 months.’

**Transfer Expenses without Performance Obligations**

**Example 41 Disclosure of a Transfer Expense Subject to Appropriations**

IE219. The facts are the same as in Case A of Example 35. The national government does not recognize a liability or an expense as at December 31, 20X2. Rather, the national government considers whether it should disclose a contingent liability, in accordance with paragraph 100 of IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*.

IE220. The national government concludes that the probability of any outflow in settlement of the contingent liability is greater than remote. Consequently, the national government makes the following disclosure in its financial statements for the reporting period ended December 31, 20X2:

> On December 15, 20X2, the national government entered into a binding arrangement to transfer CU5 million to a local government. The binding arrangement requires the local government to use the funds to reduce air pollution. The binding arrangement made it clear that the transfer was subject to an appropriation being approved, as legislation does not permit the national government to incur expenditure without an appropriation. The national government has not recognized a liability or an expense in respect of the binding arrangement because, as of December 31, 20X2, the appropriation had not been approved, and therefore the national government did not have a present obligation to transfer the funds to the local government. The appropriation was approved on January 15, 20X3, and the national government will transfer the CU5 million during 20X3.
